

Supplementary Figure

Valine

Isoleucine

Leucine

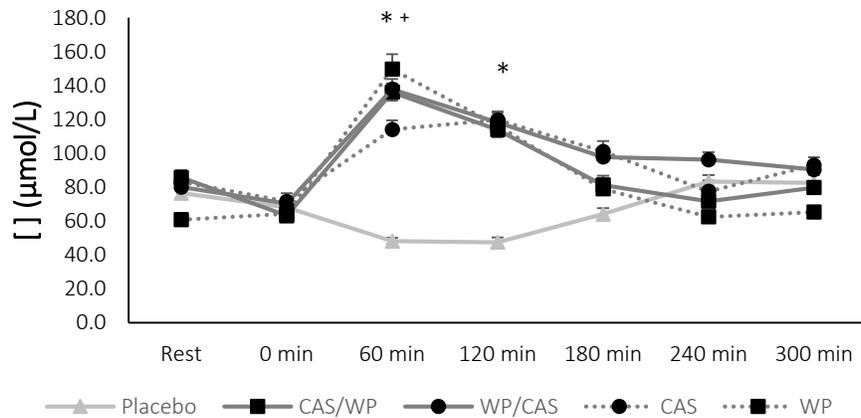

Figure S1. Plasma concentration of branched-chain amino acids (Valine, Isoleucine and Leucine) for each treatment. Concentration of plasma amino acids at different times before (Rest), and after experimental protocol (0 min, 60 min, 120 min, 180 min, 240 min, 300 min). Values expressed in Mean \pm SEM. significance level at $p < 0.05$. *Significant difference between Placebo and other supplements the 60 and 120 min, + Significant difference between CAS and other supplements. CAS/WP: 80% casein/20% whey protein; PLA: Placebo, WP/CAS: 80% whey protein/20% casein, CAS: casein, WP: Whey protein. $n = 10$.
