PE(22:5(4Z,7Z,10Z,13Z,16Z)/16:0)	0.61	0.52	4.02E-21
PC(14:0/14:0)	0.61	0.60	4.02E-21
SM(d18:0/14:0)	0.65	0.64	7.15E-24
PC(16:1(9Z)/16:1(9Z))	0.69	0.53	1.25E-28
6-Deoxohomodolichosterone	0.54	0.37	2.08E-15
PC(20:3(8Z,11Z,14Z)/14:0)	0.52	0.53	1.06E-14
PC(18:3(6Z,9Z,12Z)/15:0)	0.57	0.46	1.27E-17
PI(20:3(5Z,8Z,11Z)/16:0)	0.55	0.46	4.55E-16
<u>PS(14:0/22:2(13Z,16Z))</u>	<u>0.57</u>	<u>0.65</u>	<u>2.04E-17</u>

Fold change was calculated as summer vs. winter.

Table S10 Association between weight of milk collected, PC scores, ambient temperature and infant z scores (n = 200).

	Estimates	P value
PC1 score	-0.51	0.007
PC2 score	0.13	0.552
Ambient temperature	-0.92	0.022
WAZ	1.86	0.032
LAZ	0.94	0.210

Multiple linear regression adjusted for infant age, sex, maternal age and city.

WAZ: weight-for-age *z* score, LAZ: length-for-age *z* score

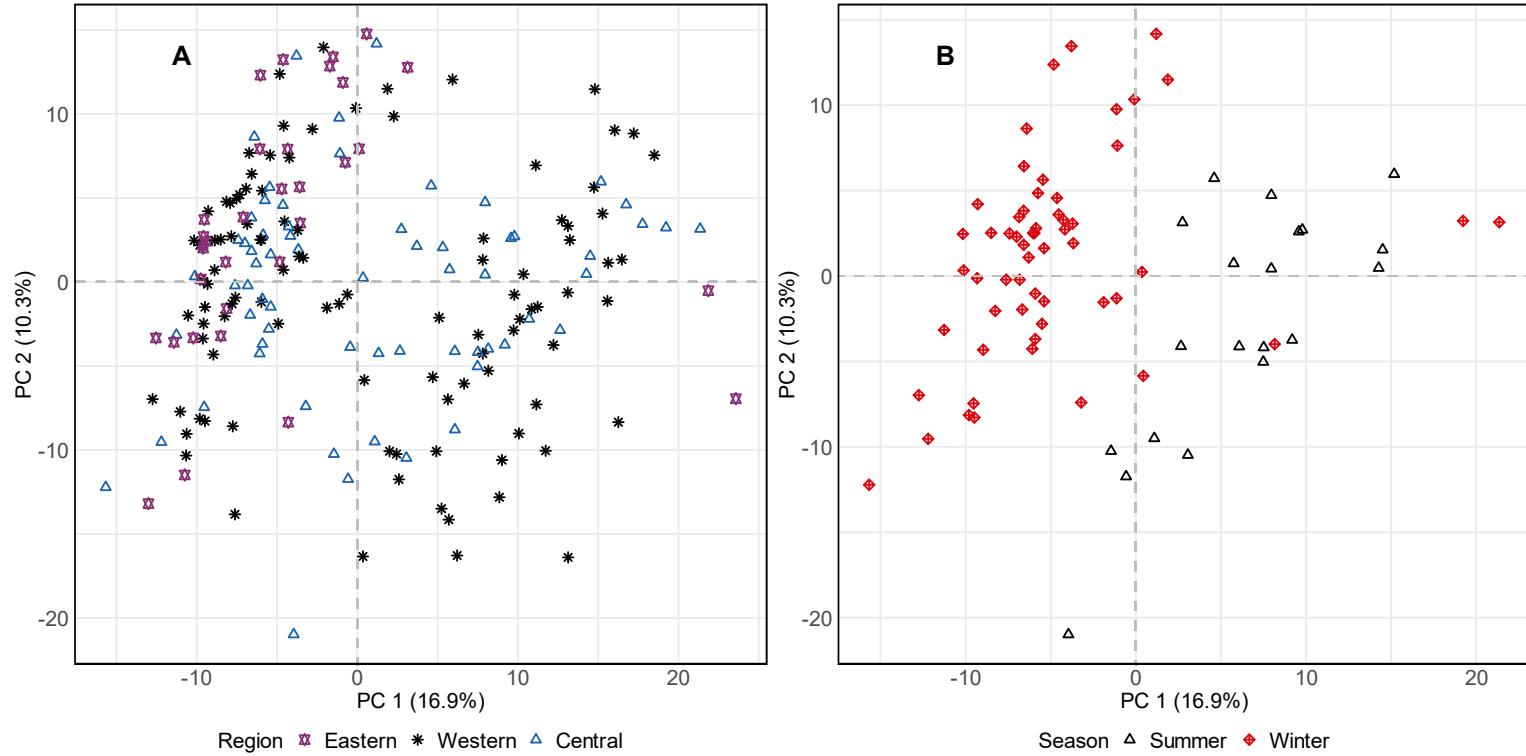

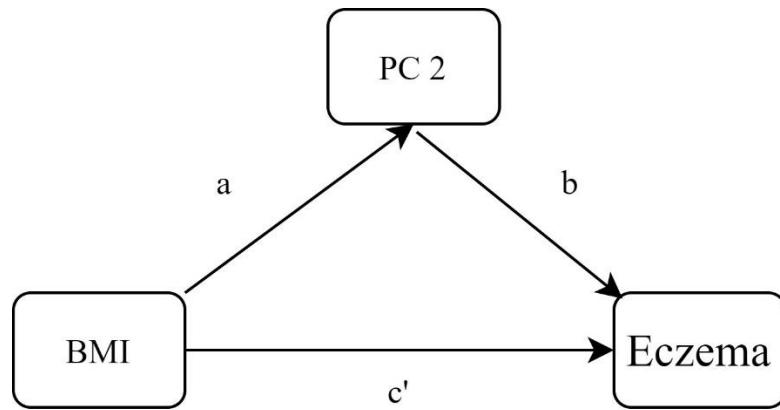

Figure S1. PCA score plot of human milk metabolites.

A: PCA score plot across three regions of China. The Eastern includes Beijing, Guangzhou, Jinhua and Weihai; the Western includes Chengdu and Lanzhou, the Central includes Zhengzhou.

B: PCA score plot between summer and winter.

Indirect effect : 1.04 (0.996, 1.142)
 Direct effect : 1.24 (1.007, 2.255) *
 Total effect: 1.285 (1.030, 2.416) *

Figure S2. Mediation analysis between human milk PC scores, maternal postpartum BMI and risk of allergies.

Indirect effect, direct effect and total effect were defined as $a \times b$, c' and $a \times b + c'$, respectively. All the effects were expressed as estimate (95% bootstrap confidence interval). * indicates significant effect based on 95% bootstrap CI. All the models were adjusted for infant age, infant sex, city, and maternal age.

PC 2: score of principal component 2; BMI: maternal postpartum BMI. ^{oo}

2. Materials and Methods

2.4. Untargeted metabolomic analysis

2.4.1. Metabolites extraction

Metabolites were extracted by mixing 100 µL of sample and 400 µL of extract solution (acetonitrile: methanol=1:1, containing mixture of three isotopically labelled internal standards). The internal standards were carefully selected to avoid any potential intervene with HM endogenous metabolism. The mixture was vortexed for 30 s, sonicated for 10 min in ice-water bath, and incubated for 1 h at -40 °C to precipitate proteins. The mixture was then centrifuged at 12000 rpm for 15 min at 4 °C. The resulting supernatant was transferred to a fresh glass vial for analysis. Quality control samples (21 in total) were prepared by mixing an equal aliquot of the supernatants from all the samples.

2.4.2. LC-MS/MS Analysis

LC-MS/MS analyses were performed using an UHPLC system (Vanquish, Thermo Fisher Scientific) with a UPLC BEH Amide column (2.1 mm × 100 mm, 1.7 µm) coupled to Q Exactive HF-X mass spectrometer (Orbitrap MS, Thermo). The mobile phase consisted of 25 mmol/L ammonium acetate and 25 ammonia hydroxide in water (pH = 9.75) (A) and acetonitrile (B). The auto-sampler temperature was 4 °C, and the injection volume was 3 µL. The QE HF-X mass spectrometer was used for its ability to acquire MS/MS spectra on information-dependent acquisition (IDA) mode in the control of the acquisition software (Xcalibur, Thermo). In this mode, the acquisition software continuously evaluates the full scan MS spectrum. The ESI source conditions were set as following: sheath gas flow rate as 30 Arb, Aux gas flow rate as 25 Arb, capillary temperature 350 °C, full MS resolution as 60000, MS/MS resolution as 7500, collision energy as 10/30/60 in NCE mode, spray Voltage as 3.6 kV (positive) or -3.2 kV (negative), respectively.

2.4.3. Data preprocessing and annotation

The raw data were converted to the mzXML format using ProteoWizard and processed with an in-house program, which was developed using R and based on XCMS, for peak detection, extraction, alignment, and integration. Then an in-house MS2 database built with over 2,000 chemical standards was applied in metabolite annotation. The similarity score of MS/MS spectra was calculated by using the forward dot-product algorithm [10]. The cutoff for annotation was set at 0.3.
