

Supplementary Material

1 Supplementary Methods

1.1 Chemicals

Chemicals and reagents used in this study were purchased from Sigma-Aldrich (Søborg, Denmark). They included deuterium oxide (D_2O , 99.9 atom % D), sodium phosphate monobasic monohydrate (NaH_2PO_3 , H_2O), sodium phosphate dibasic heptahydrate (Na_2HPO_3 , 7 H_2O), monobasic potassium phosphate (KH_2PO_4 , ≥99.0%), dibasic potassium phosphate (K_2HPO_4 , ≥98.0%), sodium salt of 3-(trimethylsilyl) propionic-2,2,3,3-d4 acid (TSP, 98 atom % D, ≥98.0%), and sodium azide (NaN_3 , ≥99.5%). The water used throughout the study was purified using a Millipore lab water system (Merck KGaA, Darmstadt, Germany) equipped with a 0.22 μm filter membrane.

1.2 Blood plasma sample preparation for NMR measurements

Sample preparation was performed according to the standard operating procedures described by Dona et al. and Monsonis et al.(34,35). Briefly, for each sample, 350 μl phosphate buffer solution(36) containing TSP (5 mM) and D_2O (20 %) were transferred to a 2 ml Eppendorf tube and gently mixed with equal amounts of plasma. Aliquots of 600 μl were then transferred into 5 mm O.D. (103.5 mm) NMR tubes. Samples were loaded into SampleJet racks (96 well plate format for batch operation) (Bruker BioSpin, Ettlingen, Germany) and measured within 72h after preparation.

2 Supplementary Results

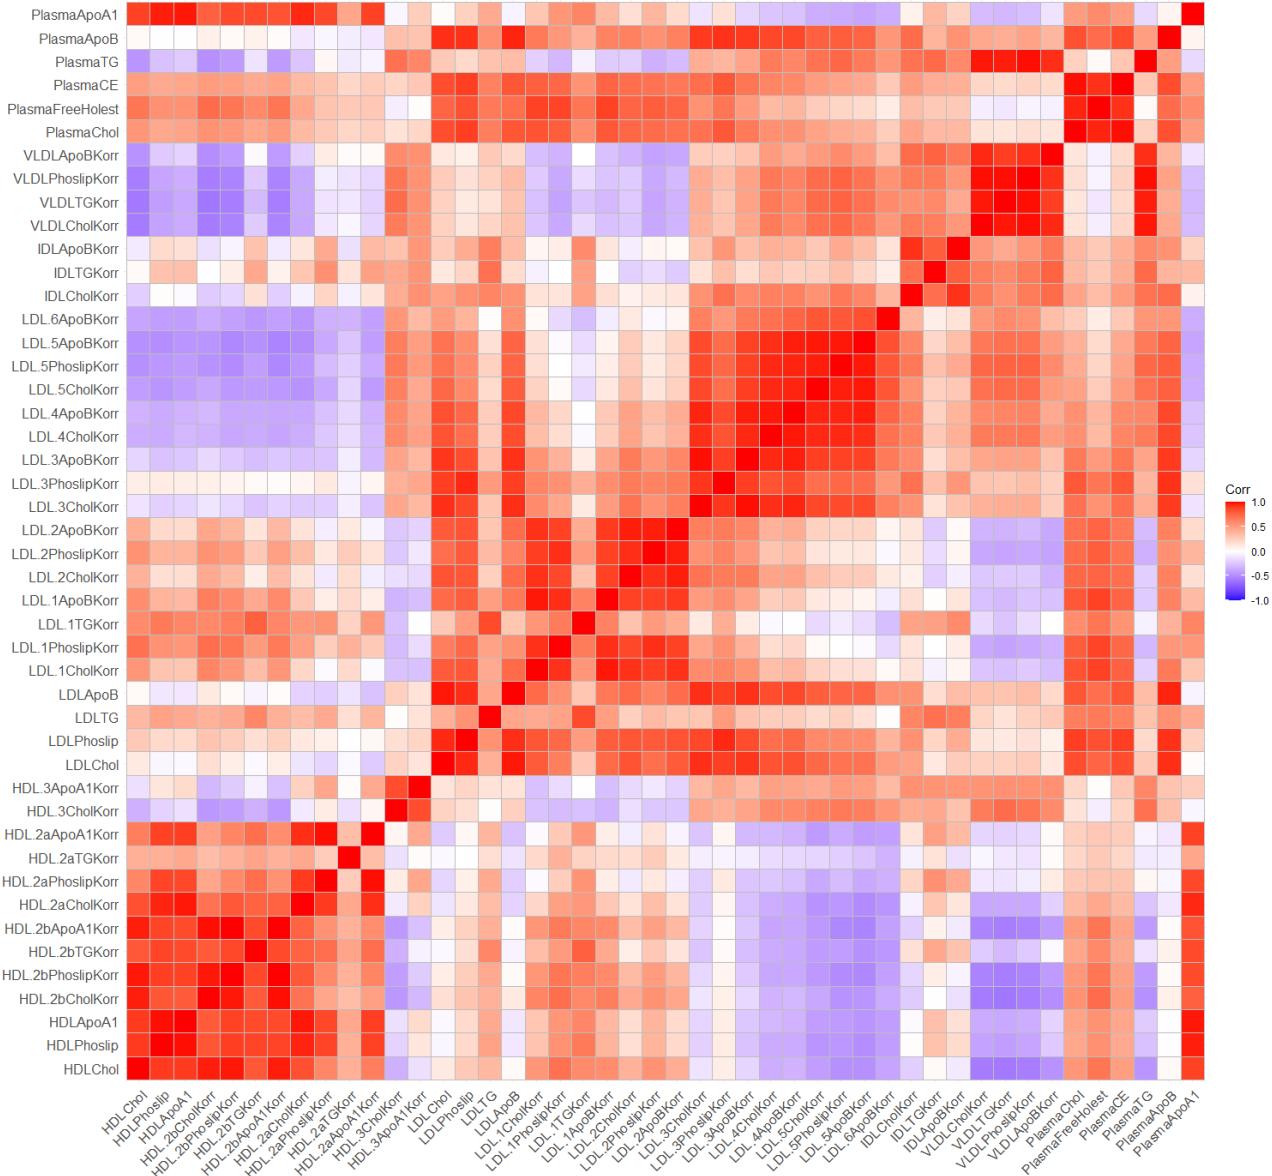

Figure S1. Correlations among lipoproteins and lipoprotein subfractions.

Lipoproteins defined by their apoB content is converted to particle number in the main analyses (Table S2).

Apo: apolipoprotein, CE: cholesterol ester, HDL: high-density lipoprotein, IDL: intermediate-density lipoprotein LDL: low-density lipoprotein PL: phospholipid, TG: triglyceride, VLDL: very-low-density lipoprotein.

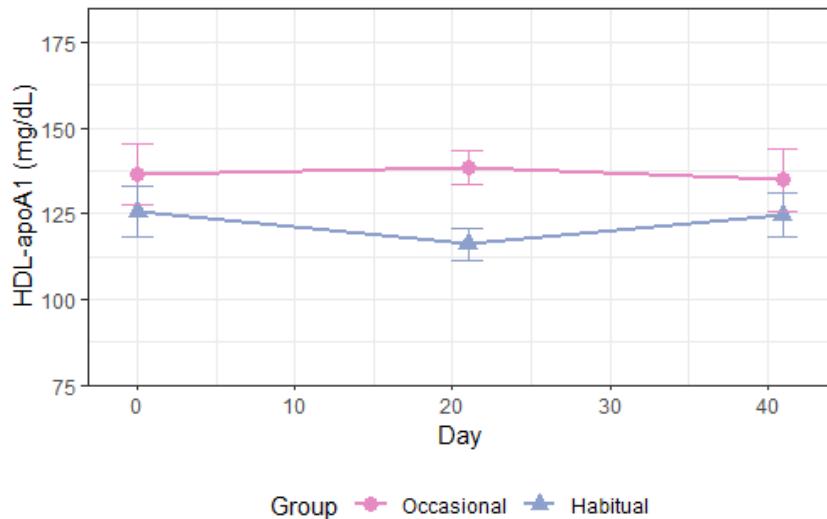

Figure S2. Circulating HDL-apoA1 during 3 weeks in period 1 and 3 weeks in period 2.
 Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.
 Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.
 Apo: apolipoprotein, HDL: high-density lipoprotein.

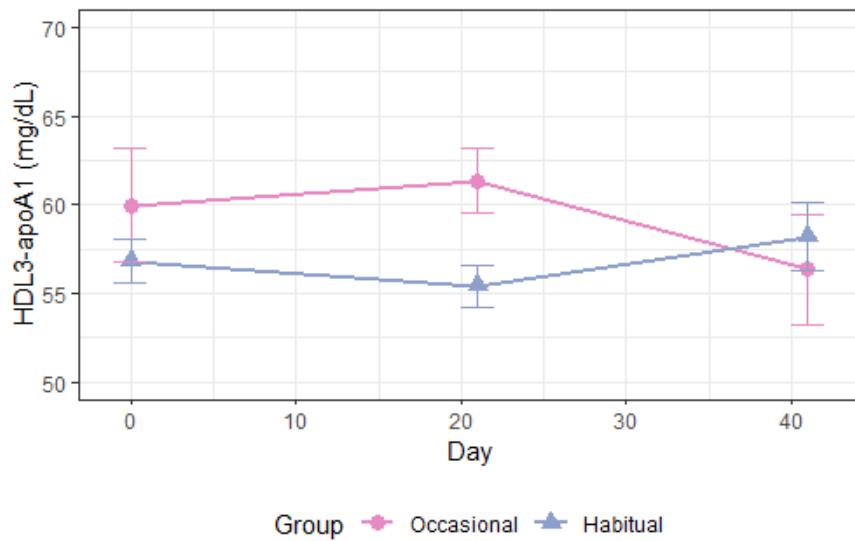

Figure S3. Circulating HDL₃-apoA1 during 3 weeks in period 1 and 3 weeks in period 2.
 Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.
 Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.
 Apo: apolipoprotein, HDL: high-density lipoprotein.

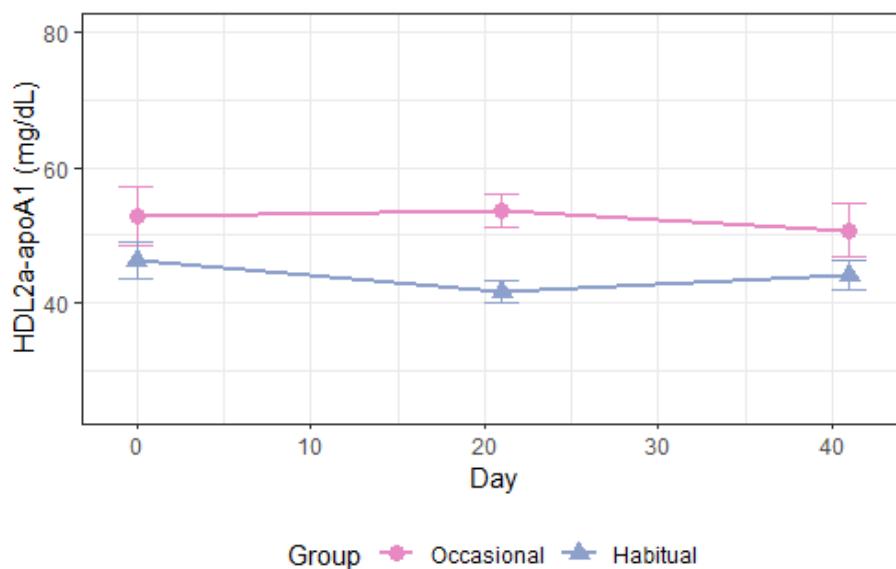

Figure S4. Circulating HDL_{2a}-apoA1 during 3 weeks in period 1 and 3 weeks in period 2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

Apo: apolipoprotein, HDL: high-density lipoprotein.

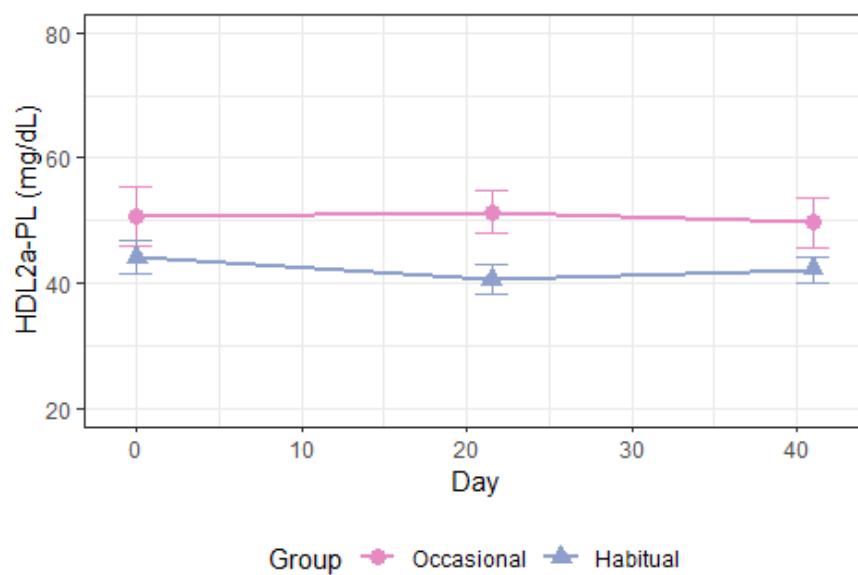

Figure S5. Circulating HDL_{2a}-PL during 3 weeks in period 1 and 3 weeks in period 2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

Apo: apolipoprotein, HDL: high-density lipoprotein, -PL: phospholipid concentration

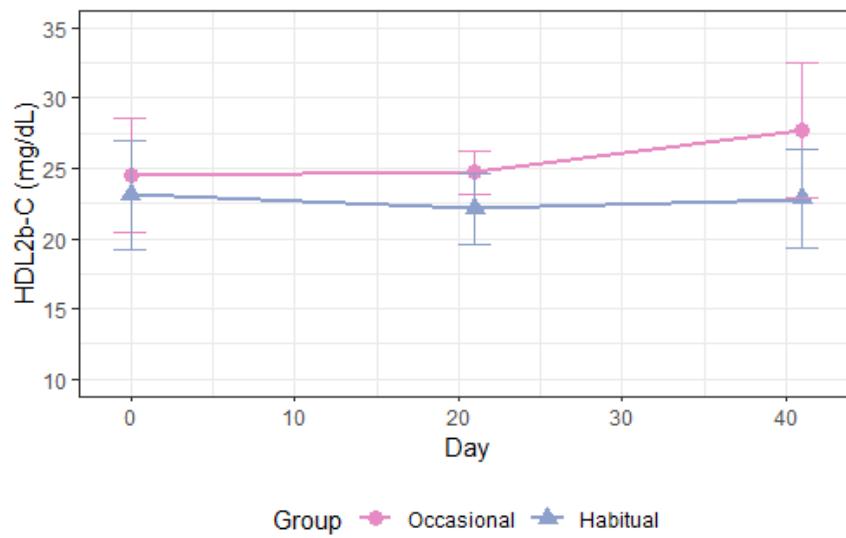

Figure S6. Circulating HDL_{2b}-C during 3 weeks in period 1 and 3 weeks in period 2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

-C: cholesterol concentration, HDL: high-density lipoprotein.

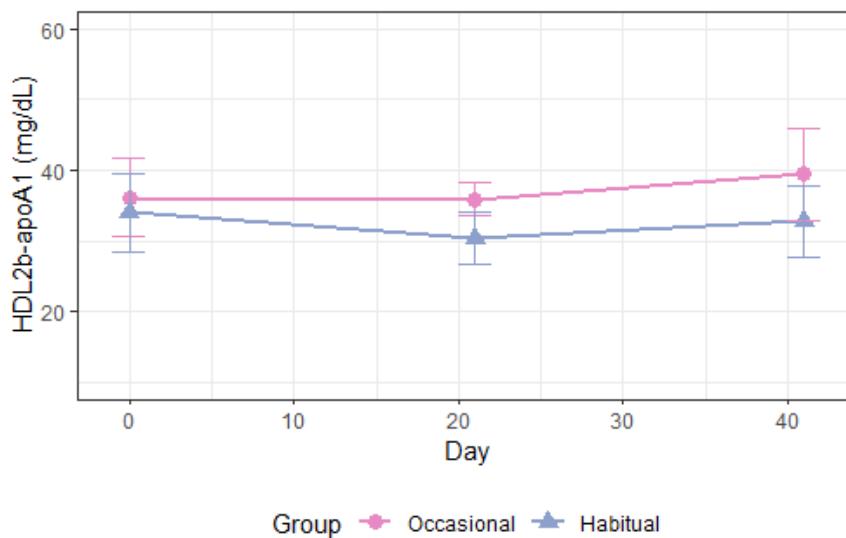

Figure S7. Circulating HDL_{2b}-apoA1 during 3 weeks in period 1 and 3 weeks in period 2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

Apo: apolipoprotein, HDL: high-density lipoprotein.

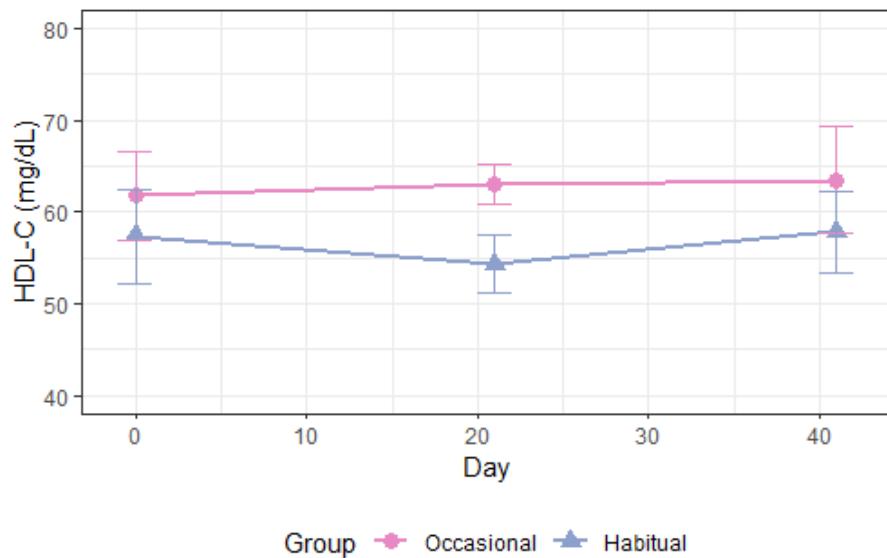

Figure S8. Circulating HDL-C during 3 weeks in period 1 and 3 weeks in period 2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

-C: cholesterol concentration, HDL: high-density lipoprotein.

Table S1. Effects of 1-2 drinks (~12-24 g) per day on NMR measured whole plasma lipids before and after alcohol intake or abstention and in drinking periods compared with abstention.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

[§]Drinking (three weeks).

[#]Abstention (three weeks).

[‡]ΔMean1: mean change in occasional drinkers compared with mean change in habitual drinkers in period 1.

[§]ΔMean2: mean change in occasional drinkers compared with mean change in habitual drinkers in period 2.

*Mean changes in lipids and lipoproteins in drinking participants compared with abstaining participants in both periods, independent of group relationship.

^{‡,§,*}Values for drinking periods were subtracted from abstaining, and negative numbers therefore indicate increased levels while drinking compared with abstaining.

CE: cholesteryl ester, FC: free cholesterol, Hab.: habitual, Occ.: occasional, PL: phospholipids, TC: total cholesterol, TG: triglycerides.

Table S2. Effects of 1-2 drinks (~12-24 g) per day on NMR measured HDLs, apoA1, and HDL subfractions before and after alcohol intake or abstention and in drinking periods compared with abstention – absolute levels before and after interventions in periods 1-2.

Occasional drinkers (n = 10): habitual alcohol intake < 2 drinks (~24 g) per week.

Habitual drinkers (n = 16): habitual alcohol intake \geq 2 drinks (~24 g) per week, max 1 drink per day in women and 2 drinks per day in men.

^{\$}Drinking (three weeks).

[#]Abstention (three weeks).

[£]ΔMean1: mean change in occasional drinkers compared with mean change in habitual drinkers in period 1.

[¤]ΔMean2: mean change in occasional drinkers compared with mean change in habitual drinkers in period 2.

*Mean changes in lipids and lipoproteins in drinking participants compared with abstaining participants in both periods, independent of group relationship.

^{£,¤,*}Values for drinking periods were subtracted from abstaining, and negative numbers therefore indicate increased levels while drinking compared with abstaining.

Apo: apolipoprotein, -C: cholesterol concentration, Hab.: habitual, HDL: high-density lipoprotein, LDL: low-density lipoprotein, Occ.: occasional, -P: particle number concentration, -PL: phospholipid concentration, -TG: triglyceride concentration.
