**Supplementary Table S1.** Validity and reliability of the methods for determining plasma folate and vitamin B<sub>12</sub> levels as well as blood cadmium concentrations.

	Instrument	Detection Limit	Recovery Rate	Standard Reference Materials (SRM)	Coefficient of Variance (CV)
Plasma folate	Radioassay kit (Bio-Rad, Richmond, CA) and the 1470	0.6 ng/mL	-	-	9.3%
Plasma vitamin B <sub>12</sub>	Wizard series gamma counter	75 pg/mL	-	-	6.8%
Blood cadmium	Inductively coupled plasma mass spectrometry	0.07 µg/L	100 ± 20%	SRM (Seronorm Trace Elements Whole Blood L-2 (Lot 1103129)) certificate value 5.8 µg/L (range 5.4–6.2 µg/L); 6.1 ± 0.5 µg/L in our system	< 5%

**Supplementary Table S2.** Comparison of 5mdC (%) and blood cadmium concentrations between RCC cases and controls stratified by a combination of plasma folate and vitamin B<sub>12</sub> levels.

	Overall	RCC Cases	Controls
High/high group for plasma folate and vitamin B <sub>12</sub> ( <i>n</i> = 237)			
5mdC (%)	3.16 (2.46, 4.24) <sup>a</sup>	2.27 (1.81, 2.62) <sup>c,e</sup>	3.28 (2.54, 4.34) <sup>d,e</sup>
Blood cadmium concentrations (µg/L)	1.30 (0.84, 2.20)	1.80 (1.12, 2.20) <sup>f</sup>	1.23 (0.78, 2.22) <sup>f</sup>
Low/high or high/low groups for plasma folate and vitamin B <sub>12</sub> ( <i>n</i> = 301)			
5mdC (%)	3.05 (2.33, 4.05) <sup>b</sup>	2.54 (2.10, 3.47) <sup>c,g</sup>	3.20 (2.50, 4.16) <sup>g</sup>
Blood cadmium concentrations (µg/L)	1.32 (0.80, 2.18)	2.00 (1.32, 2.98) <sup>h</sup>	1.24 (0.74, 1.80) <sup>h</sup>
Low/low group for plasma folate and vitamin B <sub>12</sub> ( <i>n</i> = 309)			
5mdC (%)	2.83 (2.28, 3.75) <sup>a,b</sup>	2.45 (2.10, 3.06) <sup>i</sup>	3.04 (2.40, 3.97) <sup>d,i</sup>
Blood cadmium concentrations (µg/L)	1.50 (0.92, 2.30)	1.86 (1.16, 3.28)	1.32 (0.82, 2.14)

A combination of high plasma folate (> 7.39 ng/mL) and high vitamin B<sub>12</sub> (> 532 pg/mL) was defined as the high/high group; a combination of low plasma folate (≤ 7.39 ng/mL) and high vitamin B<sub>12</sub> (> 532 pg/mL) was defined as the low/high group; a combination of high plasma folate (> 7.39 ng/mL) and low vitamin B<sub>12</sub> (≤ 532 pg/mL) was defined as the high/low groups; and a combination of low plasma folate (≤ 7.39 ng/mL) and low vitamin B<sub>12</sub> (≤ 532 pg/mL) was defined as the low/low group. Values are expressed as median (first quartile, third quartile). Kruskal-Wallis and Wilcoxon tests were conducted to compare the 5mdC (%) and blood cadmium concentrations between groups. The same letters indicate a significant difference (*p*-value < 0.05) between the two groups.
