Supplementary Figure S1. (A) There is no difference in the relative abundance of three species (*Bifidobacterium adolescentis*, *Bifidobacterium bifidum*, and *Bifidobacterium longum*) contained in SIM01 between the placebo and SIM01 groups at baseline. (B) Oral SIM01 treatment significant increase in the fold change (month 3/baseline) of three probiotic species contained in SIM01 compared with the placebo arm. *p* values were given by the Wilcoxon rank-sum test (two-sided). Elements on boxplots: centre line, median; box limits, upper and lower quartiles; points, each sample.
