# Effects of Algicidal Macrophyte Metabolites on Cyanobacteria, Microcystins, Other Plankton, and Fish in Microcosms

## Supplementary materials

**Figure S1:** View of microcosms setup. Photo A. Mavrin.

**Figure S2:** Dynamics of hydrochemical variables during exposure. Mean values and confidence intervals are given (n=3).

**Table S1.** List of species of phytoplankton in four treatments (I, II, III, IV) during experimental exposition.

Note.

xxx species dominates, accounting for more than 10% of the total phytoplankton biomass

xx species less than 5% of total biomass

x species makes up 5 to 10% of the total biomass

- species not found.

**Table S2.** Mean concentrations of various microcystin forms and their 95% confidence intervals in experimental treatments I, II, III, and IV. The different letters show significant differences ( $p < 0.05$ ) between pairs per date.
