**Table S1.** Average bacterial growth rates ( $\text{mg}\cdot\text{L}^{-1}\cdot\text{h}^{-1}$ ) during MCs degradation in MSM, reservoir water and  $\frac{1}{4}$  R2A medium enriched with 1 mg equivalent MC-LR· $\text{L}^{-1}$  of total MCs. Errors represent standard errors of two replicates. “n.d.” means not detected.

**Figure S1.** Biodegradation of MC-LR and MC-RR variants by bacterial genotypes *mlr*<sup>+</sup> (strains Y2, IM-1, IM2 and IM-3) and *mlr*<sup>-</sup> (strains 2C20 and IM-4) incubated in MSM for 120 h. A negative control without bacteria was included. Error bars represent standard errors of two replicates.

A negative control without bacteria was included. Error bars represent standard errors of two replicates.
