

Supplementary Materials: NGFI-A Binding Protein 2 Promotes EGF-Dependent HNSCC Cell Invasion

Jinkyung Kim, Sung-Min Kang, Su Young Oh, Heon-Jin Lee, Inhan Lee, Jae Chan Hwang and Su-Hyung Hong

Figure S1. Heatmap representation of the relative mRNA expression levels of *EGFR/EGR1* in the TCGA population of head and neck squamous cell carcinoma (HNSCC) specimens. Unsupervised hierarchical clustering with distance measured based on Pearson correlations was performed on log₂-transformed FPKM-UQ normalized *EGFR/EGR1* mRNA expression data for all patients. Metastatic and non-metastatic patient tumor samples were annotated with green and black bars, respectively.
