

# Supplementary Materials: Distinct Pattern of Endoplasmic Reticulum Protein Processing and Extracellular Matrix Proteins in Functioning and Silent Corticotroph Pituitary Adenomas

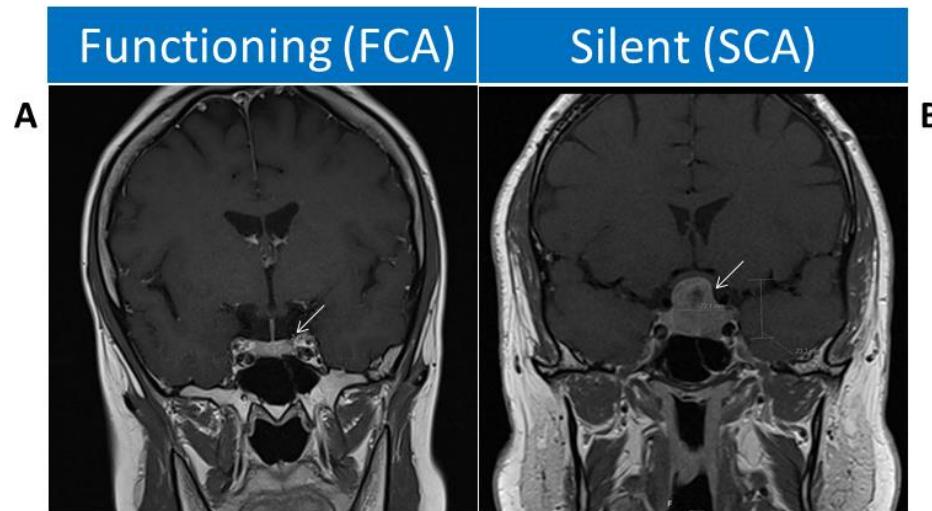

Alexander K. Eieland, Kjersti R. Normann, Arvind Y. M. Sundaram, Tuula A. Nyman, Kristin A. B. Øystese, Tove Lekva, Jens P. Berg, Jens Bollerslev and Nicoleta C. Olarescu

**Table S2.** Clinical characteristics of patients with functioning (FCA) and silent (SCA) corticotroph pituitary adenomas.

Type_ID	Age (Y)	Gender F/M	Tumor diameter (mm)	Macro/ Micro	Ki67 (%)	ACTH (pmol/L)	Cortisol (nmol/L)	RNA-seq	Proteomics
FCA_1	50	M	4	micro				yes	yes
FCA_2	56	F	2	micro	1	4.4	715	yes	yes
FCA_3	53	M	4	micro	3	14.1	586	yes	yes
FCA_4	37	F	6	micro	3	4.4	654	yes	yes
FCA_5	55	M	30	macro		36.2	811	yes	no
FCA_6	51	F	8	micro		19.6	1122	yes	no
FCA_7	19	M	10	macro	3	14	438	no	yes
FCA_8	45	F	20	macro	4	12.5	253	no	yes
FCA_9	30	M	23	macro				no	yes
FCA_10	52	F	18	macro	3	54	1059	no	yes
FCA_11	45	F	8	micro	3	15	659	no	yes
FCA_12	35	F	10	micro	3	13.3	971	no	yes
FCA_13	50	F	5	micro		3.7	512	no	yes
FCA_14	59	M	6	micro		10.2	940	no	yes
SCA_1	37	M	25	macro	3		574	yes	yes
SCA_2	68	F	26	macro	5	5.6	514	yes	yes
SCA_3	74	F	62	macro	3		267	yes	yes
SCA_4	51	M	36	macro	3		173	yes	yes
SCA_5	55	M	N/A	N/A				yes	yes
SCA_6	52	M	N/A	N/A				yes	yes
SCA_7	67	M	24	macro	3	11.7	461	no	yes
SCA_8	49	M	24	macro	3	14.7	477	no	yes

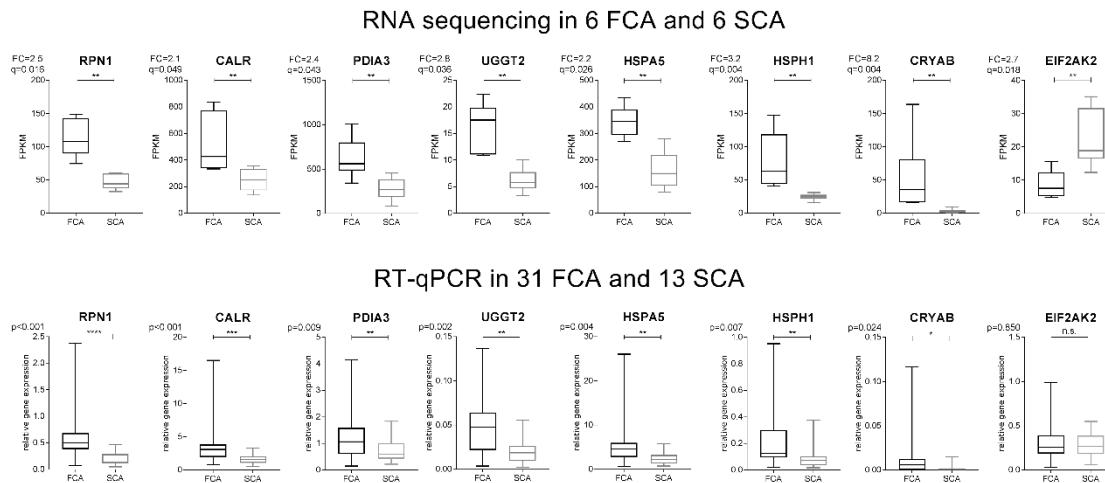

SCA_9	70	F	19	macro	5	222	no	yes
SCA_10	32	F	16	macro			no	yes
SCA_11	55	M	N/A	N/A			no	yes
SCA_12	53	M	N/A	N/A			no	yes

Age at operation in years (Y), Gender Female/Male (F/M), Tumor size showing largest measured diameter in millimeter (mm), Tumor size: Macroadenoma (Macro)  $\geq 10$  mm, Microadenoma (Micro)  $< 10$  mm, Ki67 proliferation index (%); pre-operatively plasma ACTH (pmol/L), normal range  $< 10.2$  pmol/L; pre-operatively plasma Cortisol, normal range 112–502 nmol/L. Tumors analyzed in the RNA seq. and/or proteomics = yes. Protein amount was insufficient in two patients with functioning corticotroph adenomas (FCA\_5 and FCA\_6), so these were not included in proteomics study.

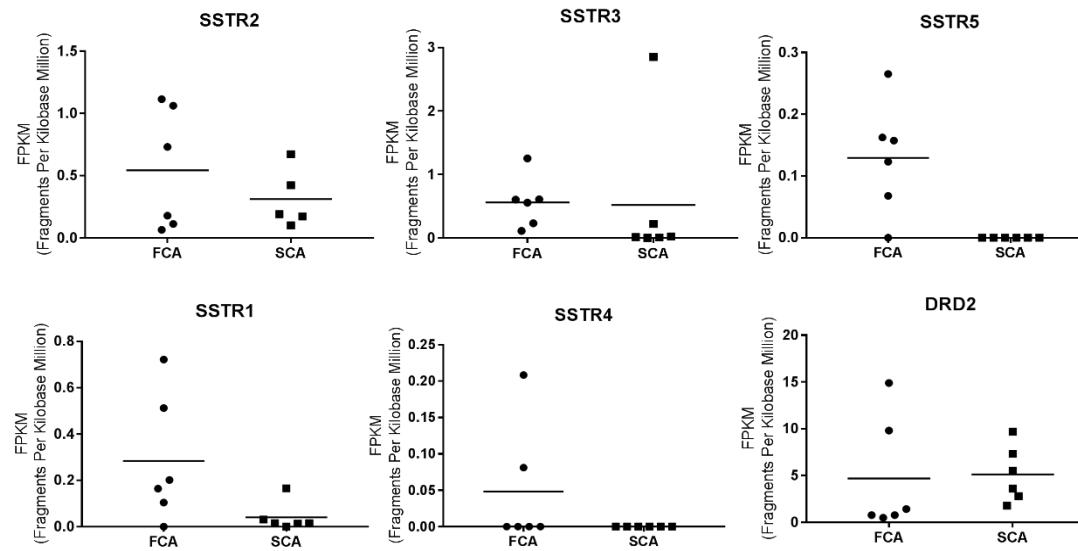

**Figure 1** Coronal MRI pictures of a functioning FCA (A) – a 2.9 mm tumor located in the upper and to the left part of the sella region, and a silent SCA (B) pituitary corticotroph adenoma – a 22 x 23 mm tumor that occupies the entire sella region and seems to invade the left parasellar region

**Figure S1.** Coronal MRI pictures of a functioning FCA (A) and a silent SCA (B) pituitary corticotroph adenoma,.

Data is presented as box and whiskers and min to max. FC, fold of change; q, adjusted p value; RT-qPCR data is analysed using GraphPad program by Mann-Whitney test and  $p < 0.05$  is statistical significant; Functioning (FCA) and silent corticotroph (SCA) pituitary adenomas.

**Figure S2.** protein processing activity of endoplasmic reticulum in functioning pituitary corticotroph adenoma (FCA).

**Figure S3.** Gene expression of somatostatin receptors (SSRs) 1–5 and dopamine receptor type 2 (DRD2) in functioning (FCA) and silent (SCA) corticotroph pituitary adenomas.
