

Supplementary Materials

Figure S1: Kaplan-Meier plots of the probabilities of survival in cancer types other than head and neck cancer. (A) Esophageal adenocarcinoma (B) kidney renal papillary cell carcinoma (C) liver hepatocellular carcinoma (D) pancreatic ductal adenocarcinoma.

Figure S2: Quantitative RT-PCR analysis of HSC-3 and HSC-4 cells. (A, B) Quantitative RT-PCR analysis of 2 genes in HSC-3 and HSC-4 cells transfected with miR-629-3p. Expression levels were normalized to β -actin, and relative expression was calculated using the comparative CT method.

Figure S3: Figure R2 EMT marker expression changes in miR-629-3p transfected SAS cells. EMT regulators, TWIST1, Slug and TWIST2 were upregulated in miR-629-3p transfected SAS cells. Epithelial markers, COL4A1 and E-cadherin were downregulated, and a mesenchymal marker, S100A4 was upregulated in miR-629-3p transfected SAS cells.

Figure S4: Downregulation of the putative miR-629-3p targeted genes in xenograft tumors of stable miR-629-3p expressing SAS cells. The expression levels of genes were normalized with β -actin, and the expression levels of negative control tumors set to 1.0. Undetectable genes in tumor samples were excluded from 19 genes. Each n = 6.
