

# Supplemental Materials: Impact of the Injection Site on Growth Characteristics, Phenotype and Sensitivity towards Cytarabine of Twenty Acute Leukaemia Patient-Derived Xenograft Models

Julia Schueler, Gabriele Greve, Dorothee Lenhard, Milena Pantic, Anna Edinger, Eva Oswaldand and Michael Lübbert

**Figure S1.** Principle component analysis of the expression pattern of three different surface markers in 20 leukaemia PDX models depending on the application route and engraftment site. Non-engrafted compartments were not included in the computation. Neither the application route, nor the engraftment site had a major impact on the expression pattern of the three investigated markers.

Table S1: patient characteristics of 20 leukaemia PDX models.
