

# Supplementary Material

**Supplementary Table S1:** Definitions of true positive (TP), false positive (FP), false negative (FN), and true negative (TN) outcomes across the four different DTA sub-analyses.

	True Positive(TP)	False Positive(FP)	False Negative(FN)	True Negative(TN)
<b>Early-Transient Motor Deficit Analysis</b>	Irreversible MEP change and early-transient motor deficit	Irreversible MEP change without early-transient motor deficit	Reversible MEP change/no MEP change and early-transient motor deficit	Reversible MEP change/no MEP change without early-transient motor deficit
<b>Transient Motor Deficit Analysis</b>	Irreversible MEP change and transient motor deficit	Irreversible MEP change without transient motor deficit	Reversible MEP change/no MEP change and transient motor deficit	Reversible MEP change/no MEP change without transient motor deficit
<b>Permanent Motor Deficit Analysis</b>	Irreversible MEP change and permanent motor deficit	Irreversible MEP change without permanent motor deficit	Reversible MEP change/no MEP change and permanent motor deficit	Reversible MEP change/no MEP change without permanent motor deficit
<b>All Motor Deficits Analysis</b>	Irreversible MEP change and motor deficit	Irreversible MEP change without any motor deficit	Reversible MEP change/no MEP change and motor deficit	Reversible MEP change/no MEP change without any motor deficit

**Supplementary Table S2:** Patient characteristics, neuromonitoring settings and interventions

Authors	Type of lesion (Age of patients)	Stimulation Parameters	Recorded Muscles	Intervention after warning
<b>TUMORS AND OTHER BRAIN LESIONS</b>				
Giampiccolo et al.(2021)	glioma (low/high grade) cavernoma ependymoma metastasis meningioma lymphoma DNET  (mean age =49y, SD =15)	-DCS - Multi-train (p=5, ISI=2ms, pd=0.5 ms)	APB,ED, QUAD,AH,TA	N/A
Gogos et al.(2020)	glioma ependymoma  (17-81y)	-DCS & TES -m/bDsCS -Multi-train (p=0-9, pd=0.05-0.5 ms, ISI= 1-4 ms, si/TES=0–200 V, si/DCS=0-20mA, si/DsCS≤20mA)	Contralateral: face, upper arm, forearm, hand, upper leg, lower leg, and foot muscles	Halt of resection
Mammadkhanli et al. (2020)	glioma (low/high grade) metastasis cavernoma meningioma AVM	-DCS -Multi-train (p=5, f=500 Hz, pd=0.3 ms, si=180V)	N/A	-Halt of resection and waiting for 10 minutes -60 Hz interference control -Steroid
Seidel et al.(2020)	glioma metastasis vascular lesions  (mean age =48y, SD =15)	-DCS - mDsCS - Multi-train (p=5, pd=0.5 ms ,f=250 Hz, ISI=4 ms, si/DsCS≤20mA)	Contralateral: face, distal and proximal upper and lower limbs	-Halt of resection(stop of resection if ≥15 min MEP change) -Ruling out technical confounders -Normalizing anesthesia -Increase of CPP -Nimodipine -Removal of brain retractor
Abboud et al.(2019)	unilateral supratentorial lesions not involving the PMC  (mean age =52y, SD =16)	-TES - Multi-train (p=5, ISI=2ms, pd=0.5 ms, si≤400V)	Bilateral: APB,TA,OO	-Halt of resection(stop of resection if ≥15 min MEP change) -Warm irrigation -Reposition of brain retractor

Majchrzak et al.(2018)	thalamic tumors (20–65y,mean age=37y)	-TES - Multi-train (p=4-6, ISI=3–4 ms, pd=0.5 ms, si≤220 mA)	-Contralateral: thenar,hypothenar, triceps surae,TA  -Ipsilateral thenar (negative control)	N/A
Moiyadi et al.(2018)	glioma (low/high grade) metastasis ependymoma embryonal tumors (3-70y, mean age =38.3y)	-DCS & TES -mDsCS -TES(Multi-train, p= 5, ISI=3ms, pd=0.5ms) -DCS(Multi-train, p= 4, ISI=4ms, pd=0.5ms)	-Contralateral: FCR,APB,TA,EDB  -One ipsilateral muscle (negative control)	-Halt of resection -Ruling out hemodynamic, systemic and anesthetic factors and strip electrode displacement -Release of brain retraction -Warm irrigation(5-10 min)
Plans et al.(2017)	glioma (17–73 y, mean age =47.29 y)	-DCS -mDsCS - Multi-train (p=5, ISI=4ms, pd=0.5ms, si/DCS≤25mA, si/DsCS≤25mA)	Bilateral: APB,ED,AH,TA	-Halt of resection -Ruling out strip electrode displacement -Increase of BP -Papaverine -Warm irrigation
Zhou et al.(2017)	AVM (6–76y,mean age= 34.9 y)	-DCS & TES - Multi-train (p=3-5, ISI=1-5ms)	N/A	-Increase of BP -Cooling -Inducing burst suppression -Removal of the clip or retractor
Abboud et al.(2016)	gliomas not involving the PMC (25–81 y,mean age=56 y)	-TES - Multi-train (p=5, ISI=2ms, pd=0.5 ms,si≤400V)	Bilateral: APB,TA,OO	-Halt of resection -Reposition of brain retractors -Warm irrigation
Boex et al.(2016)	glioma meningioma metastasis dysplasia (1-79y,median age =53y)	-DCS & TES - Multi-train (p=5, f=350 Hz, ISI=2.9 ms, pd= 0.4ms, si/DCS≤ 12 mA, si/TES≤180 mA)	-Contralateral: BB,FCR,thenar,lumbrical QUAD,TA,GAST, AH  -Ipsilateral hand and foot muscle (negative control)	-Halt of resection -Verification of MEP decrease with a stimulation increase(max 5%) -Imaging and neuronavigation reappraisal
Obermueller et al.(2015)	glioma metastasis	-DCS - Multi-train (p=5, f=350 Hz, pd=0.2- 0.3 ms, si=6-30mA)	-Contralateral: BB,FCR,APB,ADM,TA	-Halt of resection -Removal of spatulas -Irrigation(warm Ringer's solution or nimodipine)

	(glioma:16-84y,mean age=53.3y)  (metastasis:24-89y,mean age=61y)			
Shiban et al.(2015)	glioma metastasis  (32–78y,mean age=53y)	-DCS -mDsCS - Multi-train (p=5, f=500 Hz, pd=0.4ms, si/DCS=14- 26mA,si/DsCS≤20 mA)	BB,FCR, thenar, hypotenar,TA	-Halt of resection -Removal of spatulas -Irrigation(warm Ringer's solution)
Lee et al.(2014)	glioma meningioma metastasis craniopharyngioma granuloma cavernoma  (24–80 y,median age=58y)	-TES - Multi-train (p=3–5, ISI=1- 3ms,pd=0.5ms, si=200- 400 V)	Bilateral: FCR,FCU, thenar, hypotenar,TA,GAST, AH,ADM	-Halt of resection -Release of brain retraction -Restoration of BP
Gempt et al.(2013)	glioma (low/high grade)  (18–80 y, mean age =56y,SD=16)	-DCS - Multi-train (p=5, f=350 Hz,pd= 0.2- 0.3 ms, si=6-30mA)	Contralateral: BB,FCR,APB,ADM,TA	N/A
Ostrý et al.(2013)	solitary lesion compressing or infiltrating the CST  (19-73y,mean age= 48.8y)	-DCS -mDsCS - Multi-train (p=5 ,f=500 Hz, pd=0.4 ms, si/DCS=5-10% above ST, si/DsCS≤30mA)	Contralateral: BB,APB,ADQ,ED,QUAD, GAST,TA,AH	Resection interruption and subcortical mapping (If threshold increase ≥2 mA)
Pastor et al.(2013)	primary brain tumors  (mean age= 49.8y, SD=2.4)	-DCS & TES - Multi-train (DCS:p=4–6 ,f= 500 Hz, pd= 0.15ms ,si=4-30mA TES: p=5–6, f=500 Hz, pd=0.05ms,si=100–320 V)	Contralateral: OO, DELT,BB,TRI,FC,ED, thenar,TA,AH,ADM	-Changing of resection area -Halt of resection - Irrigation(warm saline)
Seidel et al.(2013)	intrinsic brain tumors, metastases and vascular lesions not involving the PMC	-DCS - mDsCS - Multi-train (p=5,f=250 Hz ISI=4 ms, pd=0.5 ms, si/DsCS≤22 mA)	Contralateral: face, distal and proximal upper and lower limbs	-Halt of resection(stop of resection if ≥15 min MEP change) -Ruling out technical confounders -Normalizing anesthesia

	(mean age= 50y, SD=17)			-Increase of CPP -Nimodipine -Removal of brain retractor (rarely)
Sakurada et al.(2012)	glioma	-DCS -N/A simulation parameters	N/A	N/A
Senft et al.(2012)	glioma (low/high grade)  (mean age=47.7y, SD=13.3)	-DCS &TES - Multi-train (p=5, ISI=4ms, pd= 0.5ms)	N/A	-Halt of resection -Irrigation(warm saline) -Reappraisal of surgical strategy
Hatiboglu et al.(2010)	Glioma  (age range of the 16 patients N/A)	-DCS -Multi-train (p=5, f=500Hz, pd=0.3-0.5 ms, si≤20 mA)	Contralateral: forearm, hand, leg and foot muscles	N/A
Ichikawa et al.(2010)	AVM  (9-56y)	-DCS -Multi-train (p=5, f=500Hz, pd=0.2ms, si=10-35 mA)	Contralateral: FCR,thenar,TA	-Stop of surgical maneuvers -Hemostasis
Szelényi et al.(2010)	glioma metastasis meningioma hemangioblastoma colloid cyst  (7-70, mean age=42.8, SD=18.2)	-TES -Multi-train (p=5, ISI=4ms, pd=0.5 ms, si/TES=ST+10- 20%ST)	Bilateral: APB, TA Contralateral: BB,ED Sometimes QUAD,AH	-Ruling out technical failures and anesthetic/ systemic confounders -Reappraisal of surgical step -Halt of resection -Replacement of retractor
Kombos et al.(2009)	intrinsic insular tumors  (23-61y)	-TES -mDsCS - Multi-train (p=5, f=500 Hz,pd=0.3 ms, si/TES≤400 V, si/DsCS≤10mA)	Contralateral: forearm flexor, thenar, QUAD	-Halt of resection -Papaverine
Neuloh et al.(2009)	glioma metastasis cortical dysplasia	-DCS &TES - Multi-train (p=5-7,f=250-500Hz, ISI= 2-4 ms, pd= 0.3- 1msec DCS /si≤30mA, TES /si≤100mA)	forearm flexor, thenar, hypotenar,TA	-Halt of resection -Cessation of vascular manipulation -Readjustment of brain retractors -Papaverine
Neuloh et al.(2007)	insular glioma  (9-73y, median age=39y)	-DCS &TES - Multi-train	distal UE muscles distal LE muscles	-Halt of resection -Readjustment of brain retractors -Papaverine

		(p=4-7 ,f=250-500Hz, ISI= 2-4 ms, pd= 0.2- 0.7msec DCS /si≤30mA, TES /si≤100mA)		
Suess et al.(2006)	glioma metastasis meningioma cavernoma AVM PNET chondroma epidermoid cyst  (16–87y, mean age=57.3y)	-DCS - Multi-train (p=5-7,f=400-500 Hz, pd=0.3 ms, si≤25mA)	Contralateral: FCR,FCU,APB,PL, FDS,QUAD,GAST	-Release of spatulas -Stop of electrocoagulation -Check of strip electrode position
Neuloh et al.(2004)	glioma meningioma metastasis AVM  (11–79 y,median age=35y)	- DCS - Multi-train (p=4-7,f=250-500Hz, ISI= 2-4 ms, pd=0.2-0.7msec si≤30mA)	Contralateral: forearm flexor, thenar, hypothenar, sometimes TA,OO,QUAD	- Exclusion of technical reasons - Increase of stimulus intensity up to maximum(if persisting MEP loss from all muscles in a limb) - Readjustment of brain retractors -Papaverine -AVM: tamponade instead of electrocoagulation, increase of BP
Kombos et al.(2001)	glioma meningioma metastasis AVM epidermoid cyst  (16–79y,mean age= 56.2y]	-DCS -Multi-train (p=7–10, f=400-500 Hz, pd=0.2-0.7 ms, si= 16.9 ± 7.76 mA)	Contralateral: forearm flexor, thenar, QUAD	- Check of electrode position and equipment -Release of brain retractor
Zhou et al. (2001)	glioma metastasis meningioma ependymoma  (6-63y, mean age=43, SD=12.9)	-TES -Multi-train (p=5, pd=0.5 ms, si=40–160 mA)	Contralateral: BB,APB,TA,OO  Ipsilateral: APB(negative control)	-Repeat stimulation with increased si or number of stimuli (train of seven) -Ruling out nonsurgical factors -Cessation of dissection -Reposition of the retractor

Cedzich et al.(1996)	glioma meningioma metastasis angioma cavernoma  (4-74y, mean age=45.5y)	DCS (p=1-5,f=500 Hz, pd=0.2-0.4ms, si=6-20 mA/ 30-110 V)	Contralateral: forearm flexor, thenar, hypothenar,sometimes TA	N/A
<b>EPILEPSY SURGERY</b>				
Koo et al.(2019)	Temporal lobe epilepsy surgery  (26–47 years, mean age= 33.3y,SD=8.6)	-TES -Multi-train (p=5, ISI=2ms, pd=0.05-0.2 ms, si≤400V)	Bilateral: APB,ADM,TA,AH	-Halt of resection -Release of brain retraction -Increase of BP -Irrigation(warm saline, nimodipine, papaverine) -Reappraisal of surgical strategy
Neuloh et al.(2010)	Intractable focal epilepsy- lesionectomy  (2-66 y,median age= 25.5y)	-DCS & TES -Multi-train (p=5-7, ISI= 2-4 ms, pd=0.3-1 ms, DCS/si≤30mA, TES /si≤100 mA)	Distal limb muscles	Technical and surgical troubleshooting
<b>ANEURYSM CLIPPING</b>				
Guo et al. (2021)	MCA aneurysms  (14-77y,mean age=53.93y, SD= 10.75)	-TES -Multi-train (p=8,f=250-500Hz, ISI=0.05-0.5ms, si=100-400V)	APB,AH	- Exclusion of anesthetic/physiological effects -Release of temporary clip -Reposition of permanent clip
Park et al.(2021)	ACA,ICA, MCA, AChA AcoA,PcoA aneurysms  (mean age=61.27y, SD=9.04)	-TES -Multi-train (p=5,ISI=1-4ms, pd=0.5 ms,si=200–350 V)	Bilateral: APB,FCR,TA,AH	-Release of temporary clip -Release / reposition of permanent clip -Relief of brain retractor - Ruling out changes of BP, BT and anesthesia
You et al.(2021)	ICA aneurysms  (mean age=53.7y, SD=10.6)	- TES -Multi-train (p=5-8 ,f=250-500Hz, pd=0.05-0.5ms,si=100-400V)	Bilateral: APB,AH	N/A

Kameda et al.(2020)	MCA aneurysms (age:N/A)	-DCS & TES -Multi-train (p=5, pd= 0.5ms, si=20% above ST)	Bilateral: thenar	-Release of temporary clip -Reposition of permanent clip
Byoun et al.(2019)	AChA aneurysms (mean age=54.66y, SD=9.12)	-TES -Multi-train (p=5, ISI=2-4ms, pd=0.05 ms, si=250-500V)	Contralateral: APB, ADM, TA, AH	Increase of stimulation intensity within 30% of baseline
Greve et al.(2019)	ACA, ICA, MCA Aneurysms (20–77y, mean age=57y, SD= 11)	-TES -Multi-train (p=4-5, ISI= 2-4msec, pd=0.5ms )	Bilateral: APB, TA	Technical, surgical, and anesthesiological troubleshooting
Li et al.(2019)	Anterior and posterior circulation aneurysms (18–77y, mean age=54y)	-TES -Multi-train (p=8, pd=0.5-1ms, ISI=2-5ms, si= 100–400 V)	Bilateral: APB, AH	-Loosening the clip -Unblocking the occlusion
Choi et al.(2017)	ACA, AchA, MCA, PCA, PcoA aneurysms (27–86y, mean age=57.5y, SD= 9.3)	-TES - Multi-train at 300-350V	Bilateral: DELT, thenar, TA, AH	-Stop of dissection -Relief of brain retractor -Release / reposition of aneurysm clips
Komatsu et al. (2017)	AChA, ICA, LSA, MCA aneurysms (temporal occlusion of the parent artery)	-DCS -si=5-15mA	Bilateral: APB, BB, DELT QUAD, GAST, TA	Release of temporary clip
Staaran et al.(2017)	ACA, ICA, MCA, PCA AChA AcoA, PcoA, ophthalmic, BA, VA, SCA, PICA aneurysms	-TES -Multi-train (p≤7, pd=0.3ms, si=30-125V )	APB, ADM, FCU, GAST, TA, AH	N/A
Kim et al.(2016)	Cerebral aneurysms (26–82y, mean age=56.8y)	-TES -Multi-train (p=6, pd=0.5ms, ISI=3ms, si= 265.6±72.67 V)	Bilateral: APB, TA, AH	Reposition of clip
Maruta et al.(2016)	ACA, ICA, MCA, AcoA aneurysms 30-89y, mean age=61.1y, SD=11.1)	-DCS & TES -Multi-train (p=5, pd=0.2-0.5ms, f=500Hz, si/DCS=ST+2mA si/TES= ST+2V)	APB, SOL, TA, AH	N/A

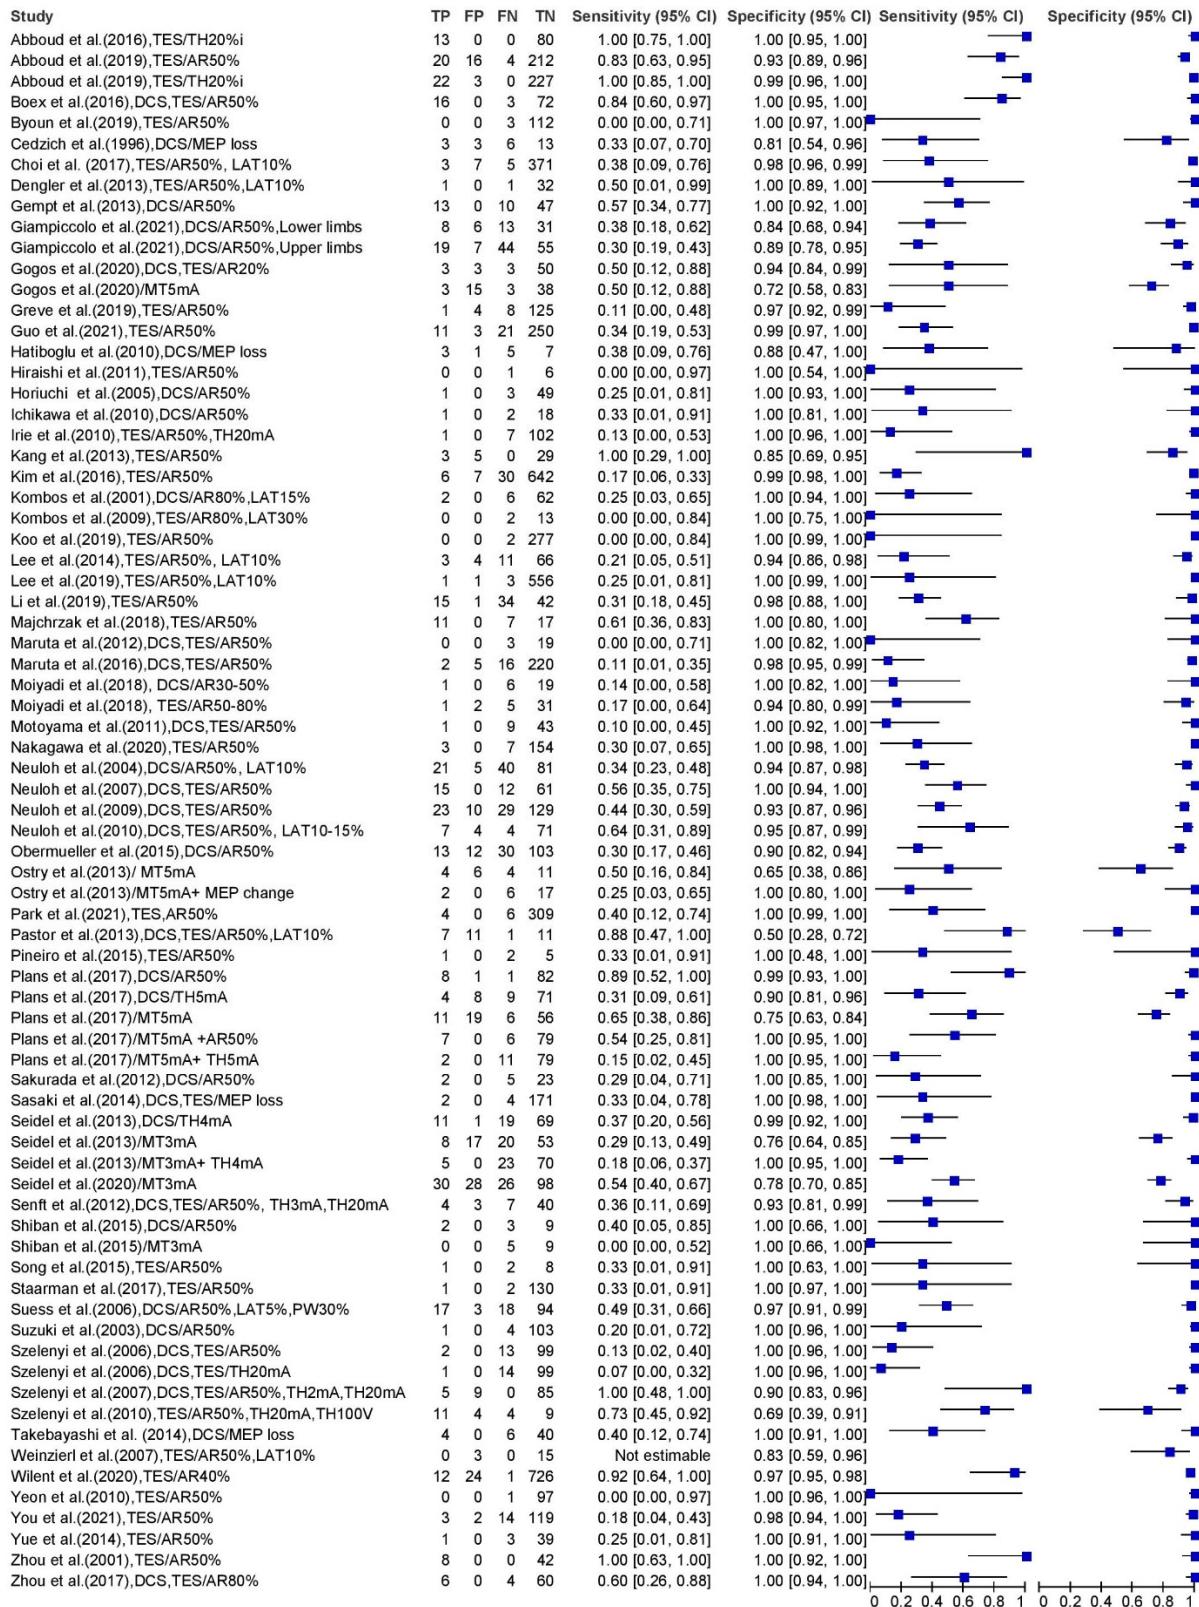

Song et al.(2015)	Giant intracranial ICA aneurysms  (24–60y, mean age=44y,SD=12.1)	-TES -Multi-train (p=5, pd=0.1ms, ISI=2ms, si=300-400V)	Bilateral: APB,AH  *ipsilateral as negative control	-Release of temporary clip -Increase of BP
Sasaki et al.(2014)	AchA,LSA,MCA aneurysms  (age:N/A)	-DCS & TES -N/A simulation parameters	N/A	Reposition of clip
Takebayashi et al. (2014)	ICA, MCA large and giant aneurysms  (14-79 years (mean age=53.2y, SD= 8.9)	-DCS -Multi-train (p=5, f=500Hz,pd=0.2ms)	Contralateral: thenar	-Correction of clip position -Readjustment of retractors -Increase of BP -Papaverine
Yue et al.(2014)	MCA aneurysms  (17-67y, mean age=48.1y,SD=10.6)	-TES -Multi-train (p=5, ISI=2ms,pd=0.1ms, si=100-400V)	Bilateral: APB,AH	-Relief of brain retractor -Release of temporary clip -Reposition of permanent clip
Dengler et al.(2013)	EC-IC bypass surgery (giant intracranial aneurysms)  (14-76 y, mean age=50.2y)	-TES -Multi-train (p=5, f=500Hz,pd=0.3ms, si≤400V)	Contralateral: forearm flexor, thenar, TA	-Ruling out nonsurgical factors -Release of temporary clip -Increasing the speed of suturing -Increase of BP
Kang et al.(2013)	ACA, ICA, MCA, AcoA,PcoA aneurysms  (33-74y, mean age=48y,SD=8.7y)	-TES - Multi-train (p=5, ISI=2 ms, pd=0.2ms)	Contralateral: BR,APB,TA,AH	-Nimodipine -Papaverine
Maruta et al.(2012)	ACA, ICA, MCA, AcoA aneurysms (3 meningiomas, 1GBM)  (40-85y, mean age= 63y,SD= 10.8)	-DCS & TES - Multi-train (p=5,pd=0.5-1ms,ISI=2ms,si=ST+2mA and ≤30mA)	SOL,TA,AH	N/A
Shi et al.(2012)	ACA, ICA, MCA, PCA,AcoA,PcoA, aneurysms	-TES Multi-train (p=3-7,pd=0.05,ISI=1-2ms,si=100-400V)	OO,APB,AH	-Adjustment of temporary clip -Papaverine -Relief of brain retractor

Motoyama et al. (2011)	ACA, ICA, MCA aneurysms  (42-79y, mean age= 62.1y, SD= 8.9)	-DCS & TES - Multi-train (p=5, ISI=2ms, si/TES= ST +20V, si/DCS= ST +2 mA and ≤30mA)	Bilateral: APB	Reposition/Release of the clip
Irie et al. (2010)	ICA,MCA,AchA, PCoA,ophthalmic/ paraclinoid artery aneurysms  (mean age=66y, SD=11)	-TES - Multi-train (p= 5, ISI=0.5 ms, si=500 V)	Bilateral: APB,thenar	Reposition/ Release of the clip
Yeon et al.(2010)	ACA,ICA, MCA, AChA AcoA,PcoA aneurysms  (mean age=55y)	-TES - Multi-train (p=5, ISI=2ms, si=300–400 V)	Bilateral: APB,ADM,TA,AH	N/A
Szelényi et al.(2007)	ACA,ICA, MCA, AcoA, posterior circulation aneurysms  (mean age=51.5y, SD=14.7)	-DCS & TES -Multi-train (p=5, ISI=4ms, pd=0.5 ms, si/TES=ST+5%ST, si/DCS≤ 25mA)	Bilateral: APB, TA,AH  Contralateral: BB,ED	-Ruling out non-surgical confounders by recording TES-MEPs from both hemispheres  -Reappraisal of surgical strategy
Weinzierl et al.(2007)	ICA, MCA, PcoA aneurysms  (age range of the 18 aneurysm-patients N/A)	-TES -Multi-train (p=4, ISI=2ms, pd=0.2 ms, si=100-700 V)	Bilateral: APB, TA	-Ruling out hemodynamic/systemic factors and technical confounders  -Release of temporary clip  -Release of retraction  -Reposition of permanent clip
Szelényi et al.(2006)	ACA, ICA, MCA, PCA,AcoA,PcoA, AchA, ophthalmic Artery,BA, PICA,SCA aneurysms  (9-85y, mean age=51.2y, SD=15.8)	-DCS & TES -Multi-train (p=5, ISI=4ms, pd=0.5 ms, si/TES≤ 240 mA, si/DCS≤ 33mA)	Bilateral: APB, TA  Contralateral: BB,ED	-Reposition of brain retractor  -After permanent clip: Doppler U/S, reposition of clip  -After temporary clip: clip reopening, duration of clipping as short as possible  -DCS MEP loss: Ruling out strip electrode displacement and

				attempt to elicit MEP with TES
Horiuchi et al.(2005)	LSA and MCA aneurysms  (age N/A for all patients)	-DCS -Multi-train ( $p=5$ , $f=500$ Hz, $pd=0.2$ ms, $si=ST+2mA$ )	Contralateral: thenar	N/A
Suzuki et al. (2003)	ICA(AchA, MCA,PcoA) aneurysms  (age N/A for all patients)	-DCS - Multi-train ( $p=5$ , $f=500$ Hz, $pd=0.2ms, si= ST+2mA$ )	Contralateral: thenar	Adjustment of surgical maneuvers
<b>ENDOVASCULAR PROCEDURES FOR ANEURYSMS</b>				
Nakagawa et al.(2020)	Anterior and posterior circulation aneurysms  (mean age=61y, SD=14)	-TES -Multi-train ( $p=5$ , $ISI=2ms$ , $pd= 1.5-2$ ms., $si=supramaximal$ )	Bilateral: APB, TA, GAST,AH	-Balloon deflation -Guiding catheter reposition -Intraarterial antithrombotic drug injection -Coil retrieval
Wilent et al.(2020)	aneurysm AVM fistula acute ischemic stroke stenosis vasospasm  (average patient age=57.1y)	-TES -N/A simulation parameters	N/A	-Adjustment of instruments -Increase of BP -Active hemostasis -Thrombolysis/ Thrombectomy
Lee et al.(2019)	Cerebral artery aneurysms AVM Arteriovenous/ Carotid-cavernous fistula Stenosis  (11–87y, mean age=59.5y)	-TES -Multi-train ( $p=8$ , $ISI=0.75ms, si=350-450 V$ )	Bilateral: APB,QUAD,TA,AH	N/A
Piñeiro et al.(2015)	ICA,MCA,BA aneurysms AVM  (38-74y)	-TES -Multi-train ( $p=5-7, ISI=4ms$ , $pd=0.5ms, si\leq300V$ )	Bilateral: APB,TA,AH	-Stop embolization - Optimizing hemodynamic/systemic conditions

Hiraishi et al.(2011)	AChA aneurysms	-TES -Multi-train (p=5, ISI=2ms, si=230-550 V)	BR, APB, AT,AH	Extraction of the coils

**AR:** Amplitude criterion; **DCS:** Direct Cortical Stimulation; **FN:** False Negative; **FP:** False Positive;  
**i:**ipsilateral ; **LAT:** Latency criterion; **MEP:** Motor Evoked Potential ; **MT:** Motor Threshold/Mapping criterion; **PW:** Pulse Width Increase; **TES:** Transcranial Electrical Stimulation; **TH:** Threshold criterion; **TN:** True Negative; **TP:** True Positive

**Supplementary Figure S4:** Heatmap depicting the diagnostic accuracy measures of MEPs for permanent motor deficits

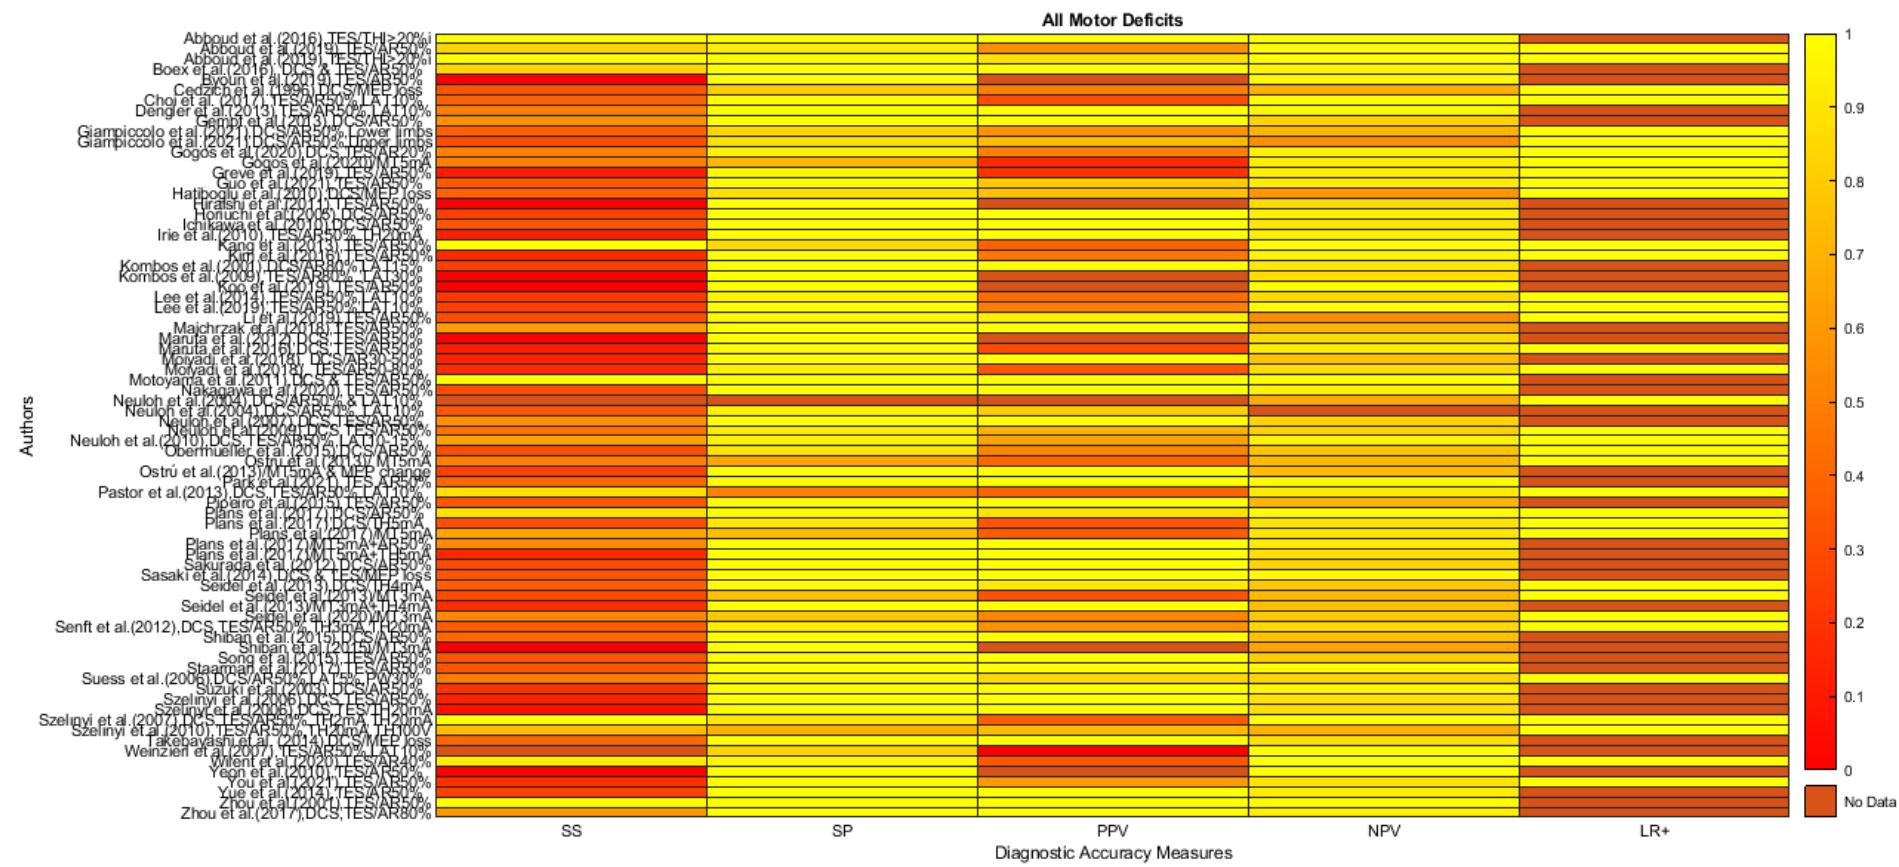

**Supplementary Figure S5:** Heatmap depicting the diagnostic accuracy measures of MEPs for transient motor deficits

**Supplementary Figure S6:** Heatmap depicting the diagnostic accuracy measures of MEPs for early-transient motor deficits

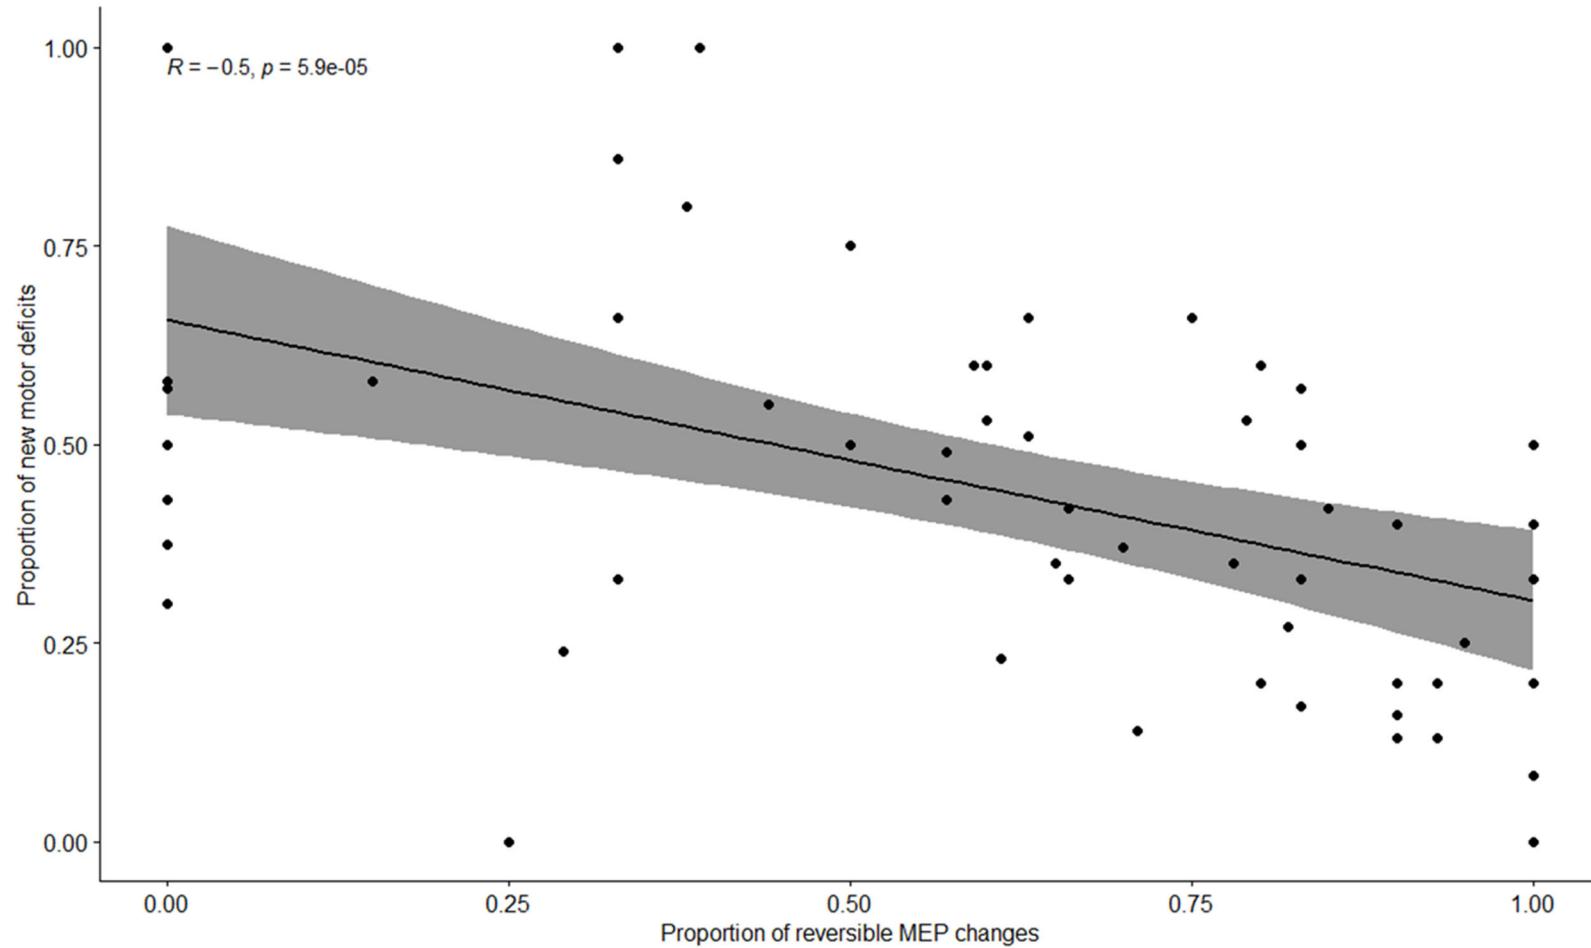

**Supplementary Figure S7:** Heatmap depicting the diagnostic accuracy measures of MEPs for all motor deficits

#### Abbreviations for Supplementary Figures S4,S5,S6 and S7

**AR:** Amplitude criterion; **DCS:** Direct Cortical Stimulation; **i:**ipsilateral; **LAT:** Latency criterion;  
**LR+:**Positive Likelihood Ratio; **MEP:** Motor Evoked Potential ; **MT:** Motor Threshold/Mapping  
criterion; **NaN:** Not available ; **NPV:** Negative Predictive Value; **PPV:** Positive Predictive Value ; **PW:**  
Pulse Width; **SS:** Sensitivity; **SP:** Specificity ; **TES:** Transcranial Electrical Stimulation; **TH:** Threshold  
criterion

**Supplementary Figure S8:** Scatterplot with regression line and 95% confidence intervals depicting the negative correlation between the proportion of reversible MEP changes and the proportion of new motor deficits associated with MEP changes. Each dot represents one study. Spearman's rank correlation coefficient= -0.498( $p < 0.001$ ).

**Supplementary Table S3:** Diagnostic accuracy measures for all postoperative motor deficits

**All motor deficits**

#### Abbreviations for Supplementary Tables S3,S4,S5 and S6

**AR:** Amplitude criterion; **DCS:** Direct Cortical Stimulation; **i:**ipsilateral; **LAT:** Latency criterion;  
**LR+:**Positive Likelihood Ratio; **MEP:** Motor Evoked Potential ; **MT:** Motor Threshold/Mapping  
criterion; **NaN:** Not available ; **NPV:** Negative Predictive Value; **PPV:** Positive Predictive Value ; **PW:**  
Pulse Width; **SS:** Sensitivity; **SP:** Specificity ; **TES:** Transcranial Electrical Stimulation; **TH:** Threshold  
criterion

**Supplementary Table S7:** The table summarizes the relative rates of all motor deficits as well as the total number of early-transient, transient and permanent motor deficits in conjunction with MEP changes.

Authors	No of all new motor deficits/ Total no of patients(%)	No of early-transient motor deficits/ No of all MEP changes(%)	No of transient motor deficits/ No of all MEP changes(%)	No of permanent motor deficits/ No of all MEP changes(%)
<b>TUMORS AND OTHER BRAIN LESIONS</b>

**Supplementary Table S8:** Causes of injury in tumor patients with permanent motor deficits

Authors		Mechanical Injury	Vascular injury	Unclear nature of the injury
Gogos et al.(2020)		-	2/58 (3.4%) <sup>1)</sup>	-
Seidel et al.(2020)		3/182 (1.6%)	3/182 (1.6%)	-
Plans et al. (2017)		-	1/92 (1.1%)	13/92( 14.1%)
Boex et al.(2016)		-	5/104 (4.8%)	-
Obermueller et al.(2015)	Glioma Metastasis	4/105 (3.8%) 1/53 (1.9%)	1/105 (1%) 1/53 (1.9%)	-
Shiban et al.(2015)		-	1/14 (7.1%)	-
Lee et al. (2014)		-	3/84 (3.6%) <sup>2)</sup>	-
Gempt et al.(2013)		-	8/70 (11.4%)	2/70 (2.9%)
Seidel et al.(2013)		3/100(3%)	2/100(2%)	-
Sakurada et al.(2012)		-	1/30 (3.3%)	-
Hatiboglu et al.(2010)		-	1/16 (6.3%)	2/16 (12.5%)
Ichikawa et al.(2010)		-	1/21 (4.8%)	-
Neuloh et al.(2010)		3/86 (3.5%)	-	-
Szelényi et al.(2010)		15/25 (60%)	4/25 (16%)	-

Neuloh et al.(2009)	-	2/191(1%)	2/191(1%)
Neuloh et al.(2007)	-	7/88(8%)	-
Suess et al.(2006)	17/232 (7.3%)	2/232 (0.9%)	-

**Notes:**

- 1)The authors also report about previous series with almost equal distribution of vascular and mechanical injuries ( in this previous series they applied Penfield stimulation without MEP monitoring and without monopolar short train mapping)
- 2) The authors stated they could only speculate on the cause

In the remaining 14 included tumor papers no specification about the type of injury that led to permanent motor deficit was described
