C

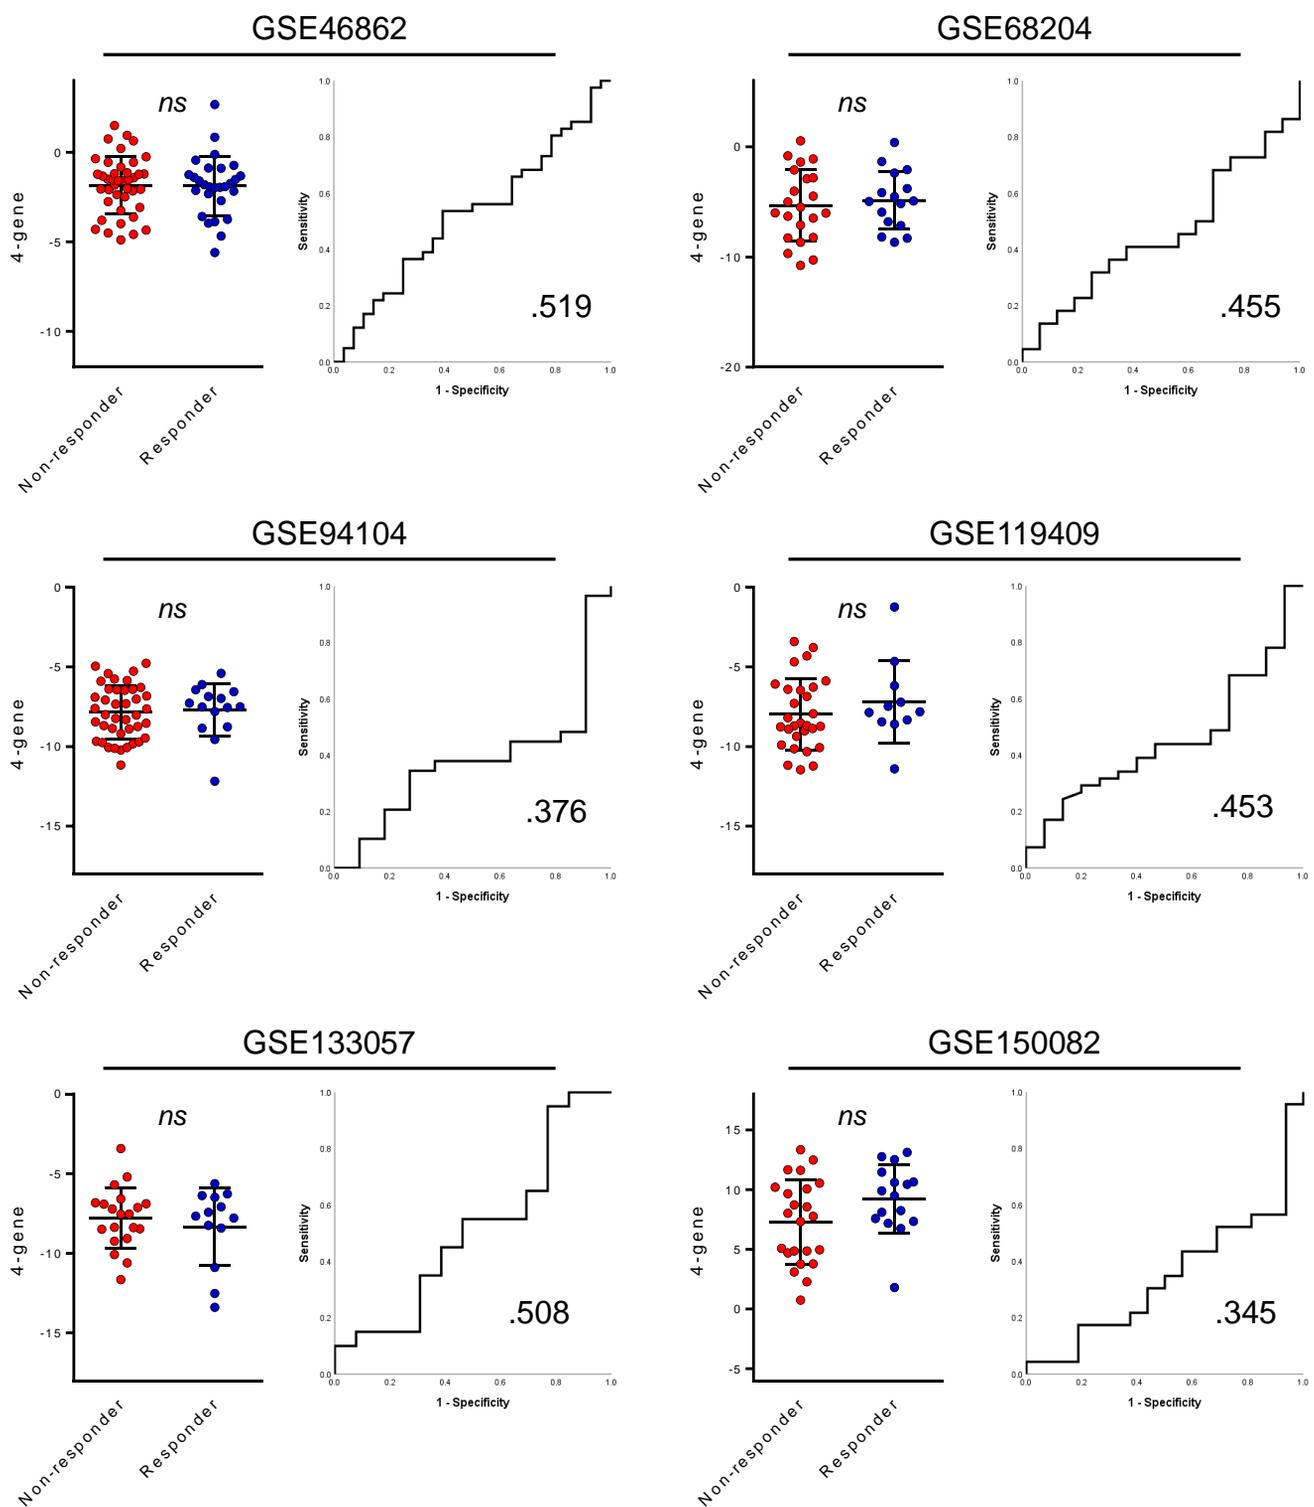

Supplementary Figure S1. Identification of 4 common genes that were significantly differentially expressed between biopsy specimens from non-responders and responders in three discovery cohorts, including GSE35452, GSE45404 and GSE53781. (A,B) The expression of GPR110 and TNIK was increased, but WDR4 and BRCA1 expression was decreased in non-responders compared to responders. (C) The levels of the 4-gene signature based on GPR110, TNIK, WDR4 and BRCA1 were higher in non-responders with AUCs ranging between 0.77 and 0.93 in each of the discovery cohort.
