

**Supplemental Figure 1. BCG treatment elevates EP4 expression.** **A**, BCG enhanced EP4 receptor gene expression in tumor tissue explants. **B**, EP4 receptor protein surface expression by cultured human macrophages measured by flow cytometry. Data from a representative donor. **C**, No changes in EP2 receptor gene expression in tumor tissue explants after BCG administration. Tumor tissue explants are from 4 different independent patients ( $n=4$ ). The results are shown as mean  $\pm$  SEM.
