

Supplementary Figure S3. *Tsc2*^{−/−} MEFs and 621-102 AML tumor spheroids recover after Ref-1 inhibitor treatment. *Tsc2*^{−/−} MEFs and 621-102 AML cells were plated on soft agar coated 96 well plates and treated with either vehicle only (DMSO), APX3330 (50 or 100 μM), APX2009 (5 or 10 μM), APX2014 (5 or 10 μM) or 10 μM etoposide for 11 days. Spheroids were then re-plated onto standard tissue culture plates and grown under drug-free conditions. Images were taken after 48 h. Relative outgrowth areas are outlined.
