

Supplementary Figure S1. APX3330 and mTOR inhibitors do not reduce RelA S276 or STAT3 Y705 phosphorylation in *Tsc2*^{−/−} MEFs. *Tsc2*^{−/−} MEFs were treated with either DMSO, 50 nM rapamycin, 1 μ M Ku-0063794 (KU) or APX3330 (25 or 50 μ M) for 18 h under hypoxia (1 % O₂). Western blots for total and phosphorylated RelA and STAT3 were carried out, *n*=3.
