

Supplementary Figure S5. Dynamic change in the count and proportion of blood cells from day 0 to day 21. Wilcoxon matched-pairs signed rank test was performed to compare values between day 0 and day 7. The values from Day 21 were not compared with Day 0 and Day 7 due to the low sample size ($n = 8$). (a–i) No significant difference was found between day 0 to day 7 in White blood cell (WBC), Absolute neutrophil count (ANC), lymphocytes, the frequencies of T cells among lymphocytes, of CD8⁺ T cells among T cells, of CD4⁺ T cells among T cells, and of PD1⁺CD8⁺ T cells among CD8⁺ T cells.
