

Supplemental Table S3 – Reader concordance on bone remineralization

Concordance for the presence of rim sclerosis in lesions suspected by at least one of the readers was 72% (60/[60+21+2]). For trabecular sclerosis, reader concordance was 73% (29/[29+3+8]).

<b>Rim sclerosis</b>		<b>Reader 2</b>		
		Absent	Present	Sum
<b>Reader 1</b>	Absent	105 (56%)	2 (1%)	107 (57%)
	Present	21 (11%)	60 (32%)	81 (43%)
	Sum	126 (67%)	62 (33%)	188 (100%)
<b>Trabecular sclerosis</b>		<b>Reader 2</b>		
		Absent	Present	Sum
<b>Reader 1</b>	Absent	148 (79%)	8 (4%)	156 (83%)
	Present	3 (2%)	29 (15%)	32 (17%)
	Sum	151 (80%)	37 (20%)	188 (100%)

**Note.** – Concordance was calculated for all 188 lesions described by both readers at baseline and follow-up imaging.
