Table S2. Genetic backgrounds and French-American-British (FAB) subtypes of tested cell lines

Cell lines	Leukaemia type	FAB subtype	Oncogenic drivers	Ref
HL-60	AML	M2	N-RAS	[24,25]
NB4	AML	M3	PML-RARA	
K-562	CML	M1	BCR-ABL	
U-937	AML	M5	MLLT10-PICALM	

Figure S1. Effect of rilpivirine on the formation of colonies of HL-60 and NB4 cells. Cells were treated with rilpivirine at indicated concentrations. After 10 days, cells were stained with MTT and colonies were observed in an inverted microscope. Representative images are shown.

HL-60

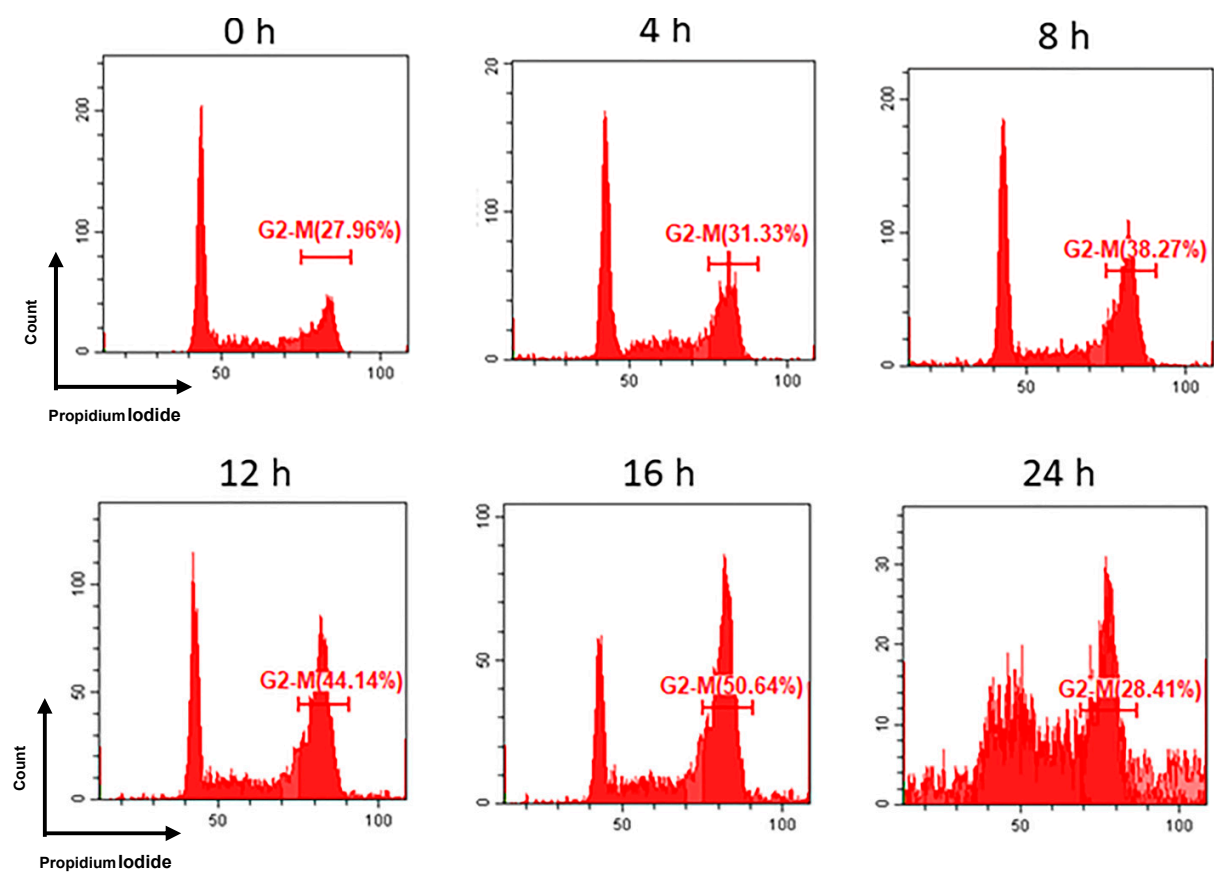

Figure S2. Cell cycle analysis of HL-60 cells following rilpivirine treatment (10 μ M) at indicated time points. Representative plots from flow cytometry are shown.

A**B**

Figure S3. Plasma concentration-time profile of rilpivirine in mice after a single oral dose of 50 mg/kg (A) or a single IV dose of 2 mg/kg (B).

Table S3. Pharmacokinetic properties of rilpivirine in mice.

Pharmacokinetic properties of rilpivirine in mice						
Route	Parameter					
	Dose (mg/kg)	C _{max} (μM)	AUC _{0-t} (μM*h)	t _{1/2} (h)	T _{max} (h)	F (%)
PO	50.00	33.30	247.3	4.91	1.50	49.1
IV	2.00	22.40	20.0	1.30	0.033	-

Figure S4. Effect of rilpivirine on body weight of mice. Female nude mice (n = 3 per group) were administered oral doses of rilpivirine at 300 mg/kg per day for seven days followed by seven days of observation. Body weight was assessed daily. Data were presented as mean ± SEM.

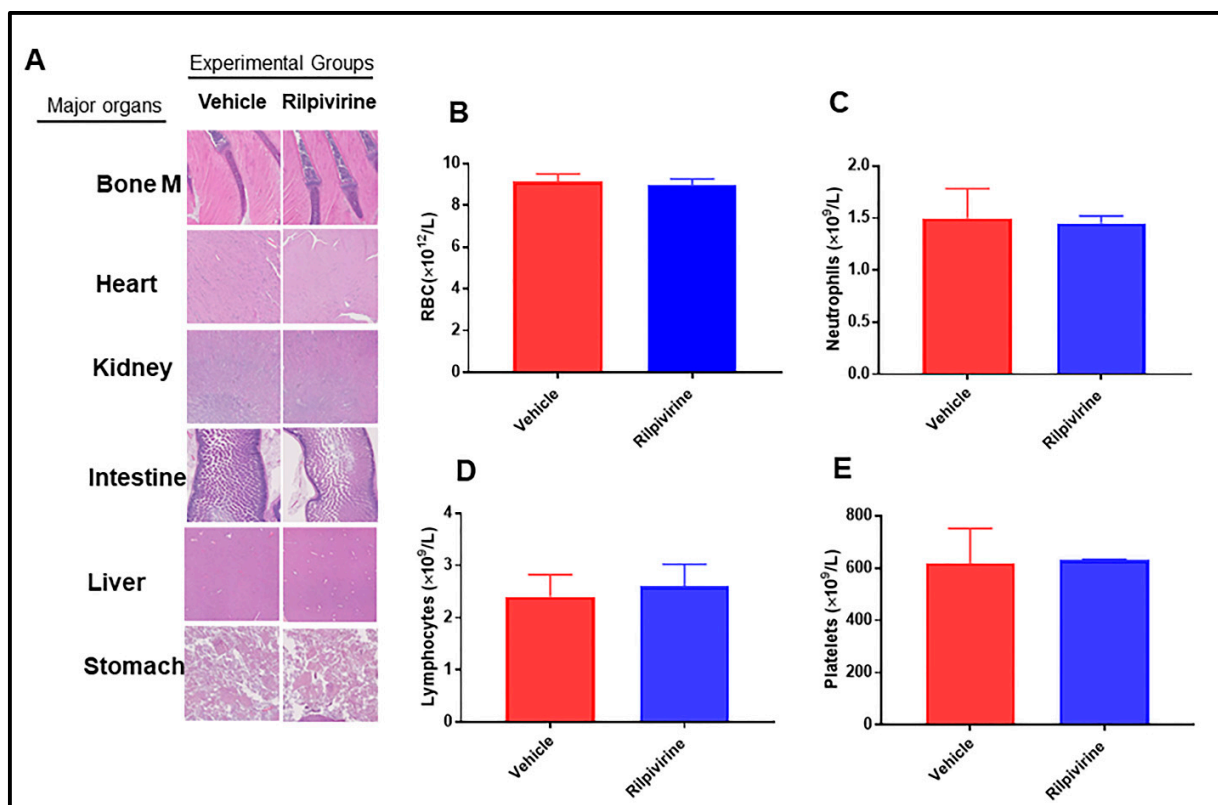

Figure S5. *In vivo* toxicity assessment of rilpivirine in mice: HL-60 tumour-bearing mice ($n = 3$) were treated with vehicle (0.5% HPMC, PO, QD) or rilpivirine (200 mg/kg, PO, QD) for 14 days. Blood, bone marrow, heart, kidney, intestine, liver and stomach were collected 24 hours post final dose. (A) Histopathological study of bone marrow, heart, kidney, intestine, liver and stomach. Complete blood count analysis of (B) red blood cells, (C) neutrophils, (D) lymphocytes, and (E) platelets 24 hours post final treatment.

Figure S6. Western blot analysis of HL-60 cells treated with rilpivirine, cytarabine, or the combination at indicated concentrations for 72 hours. Antibodies used are indicated on the left side of each panel, respectively. DMSO diluent is used as a control and β -actin used as an internal loading control.

Figure S7. PIM1 expression across a panel of myeloid leukaemia cell lines shown by western blot analysis of cell lysates. β -Actin was used as an internal loading control. KG1a cell line was used as a positive control.

A

B

Figure S8. (A) Dose-response curve for AZD1208 against K-562 cells at 72 hours. GI_{50} value (μM) is shown. (B) Cell cycle analysis of K-562 cells after incubation with AZD1208 (60 μM) for 48 hours. Representative histograms with DNA content are shown.

Figure S9. Cell cycle analysis of KG1 cells following treatment with 10 μM or 20 μM rilpivirine for 24 hours. Representative histograms with DNA content are shown.

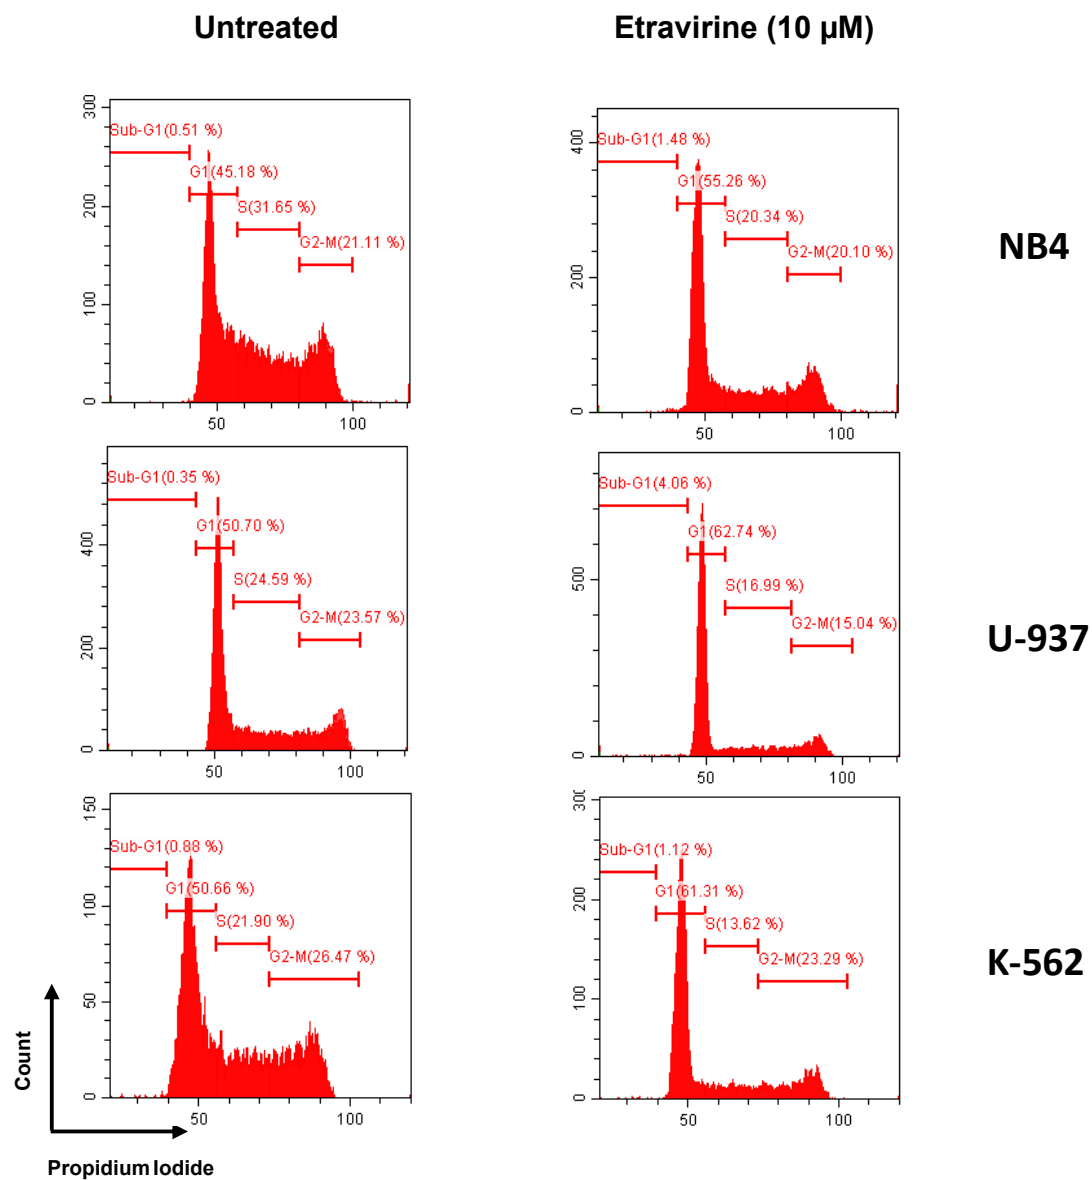

Figure S10. Cell cycle analysis of NB4, U-937 and K-562 cells following treatment with 10 μ M etravirine for 24 hours. Representative histograms with DNA content are shown.

MV4-11, 48h

Rilpivirine (μM)
