

**Table S2:** Conditional logistic regression for the predicted odds ratios and incidence of pre-diagnostic thrombocytosis occurrence, clustering by case-control matching. Adjusted for significant predictors of pre-diagnostic thrombocytosis: smoking status, previous COPD diagnosis, and anti-platelet drug prescriptions.. \* baseline variable, OR odds ratio, CI confidence interval.

	Adj. OR	95% CI	p-value
<u>Case-control</u>			
Control	1*		
Case	8.9	8.0 to 9.9	<0.001
<u>Smoking-status</u>			
Never-smoker	1*		
Ever-smoker	1.5	1.2 to 1.8	0.001
<u>Previous COPD diagnosis</u>			
No	1*		
Yes	2.7	2.2 to 3.3	<0.001
<u>Anti-platelet drug prescription</u>			
No	1*		
Yes	1.2	1.0 to 1.4	<0.05
