

Table S4: Conditional logistic regression for the predicted odds ratios and incidence of pre-diagnostic thrombocytosis occurrence for cases and controls, clustering by case-control matching identifier. Adjusted for significant predictors of pre-diagnostic thrombocytosis: smoking status, and previous COPD diagnosis. * baseline variable, OR odds ratio, CI confidence interval.

	Adj. OR	95% CI	p-value
<u>Case-control</u>			
Control	1*		
Case	6.3	5.6 to 7.2	<0.001
<u>Smoking-status</u>			
Never-smoker	1*		
Ever-smoker	1.3	1.0 to 1.6	<0.05
<u>Previous COPD diagnosis</u>			
No	1*		
Yes	1.6	1.3 to 2.0	<0.001
