**Table S1.** Crystallite size of the prepared materials.

| Samples  | Crystallite size (nm) |
|--|-----------------------|
| BiO <sub>2-x</sub>                                     | 48.9                  |
| Bi <sub>2</sub> WO <sub>6</sub>                        | 6.4                   |
| 5%Bi <sub>2</sub> WO <sub>6</sub> /BiO <sub>2-x</sub>  | 40.4                  |
| 10%Bi <sub>2</sub> WO <sub>6</sub> /BiO <sub>2-x</sub> | 39.5                  |
| 15%Bi <sub>2</sub> WO <sub>6</sub> /BiO <sub>2-x</sub> | 38.9                  |
| 20%Bi <sub>2</sub> WO <sub>6</sub> /BiO <sub>2-x</sub> | 37.4                  |
| 25%Bi <sub>2</sub> WO <sub>6</sub> /BiO <sub>2-x</sub> | 36.5                  |

The average crystallite sizes for pure BiO<sub>2-x</sub> as well as Bi<sub>2</sub>WO<sub>6</sub>/BiO<sub>2-x</sub> composites are calculated using the Scherrer equation:

$$D = \frac{0.9\lambda}{\beta \cos\theta} \quad (1)$$

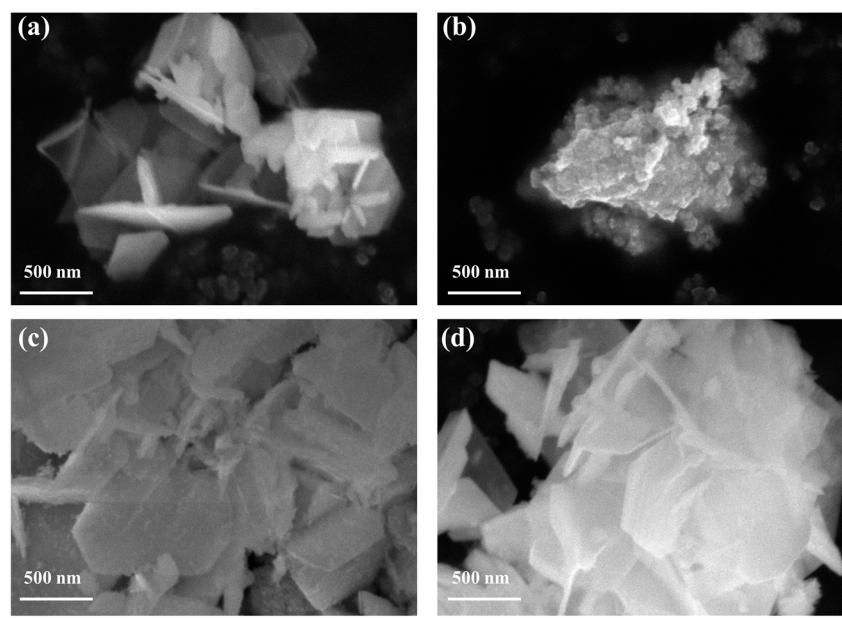

where D is the crystallite size,  $\lambda$  is the wavelength of the incident X-ray,  $\beta$  is the value of full width at half maxima (FWHM), and  $\theta$  is the diffraction angle corresponding to the most intense peak, i.e. (1 1 1) plane. The lattice parameters were calculated from the inter-planar distance (d) and the miller indices (h k l) of the most intense (1 1 1) plane using the equation[1]:

$$\frac{1}{d^2} = \frac{h^2}{a^2} + \frac{k^2}{b^2} + \frac{l^2}{c^2} \quad (2)$$

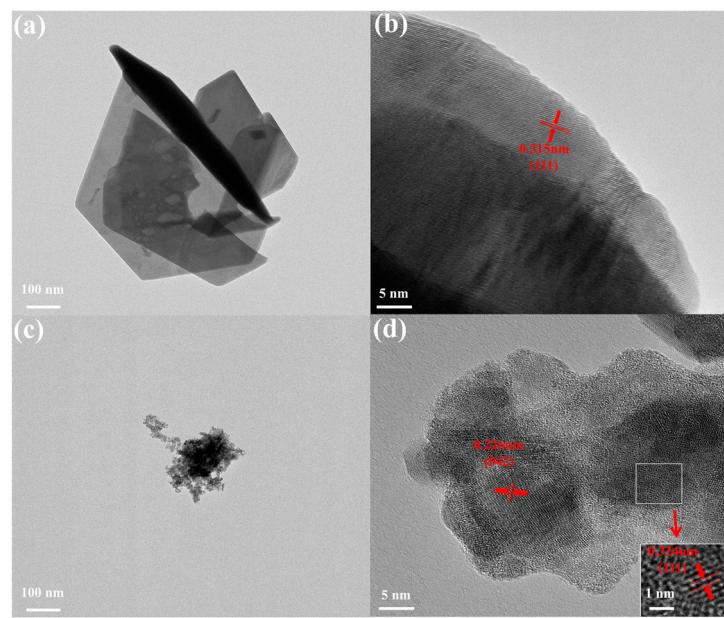

These results indicated that the proposed heterostructure induced lattice strain in Bi<sub>2</sub>WO<sub>6</sub>/BiO<sub>2-x</sub> did not reflect any significant changes in the lattice parameters a, b, and c.

**Table S2.** Porous parameters of  $\text{BiO}_{2-x}$ ,  $\text{Bi}_2\text{WO}_6$  and 20%  $\text{Bi}_2\text{WO}_6/\text{BiO}_{2-x}$ .

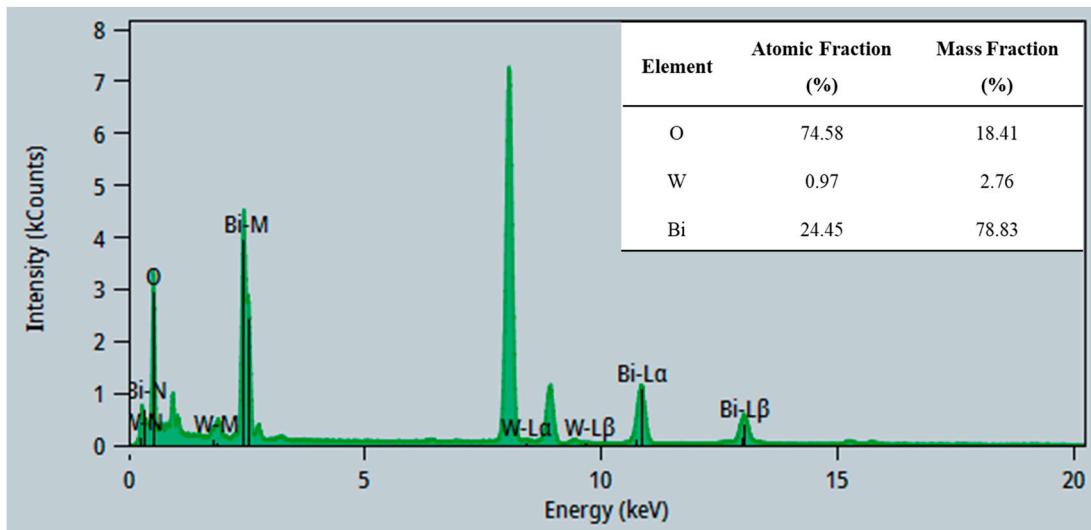

| Samples                                       | Surface Area<br>( $\text{m}^2/\text{g}$ ) | Pore Volume<br>( $\text{cm}^3/\text{g}$ ) | Pore Size<br>(nm) |
|---|---|---|-------------------|
| $\text{BiO}_{2-x}$                            | 5.1639                                    | 0.032946                                  | 53.7777           |
