Supporting Information

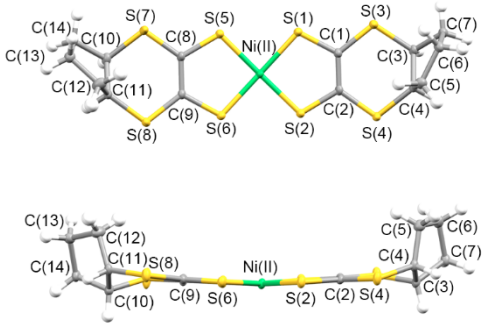

Figure S1. Molecular structure of **10** along vertical and parallel directions with atom labels.

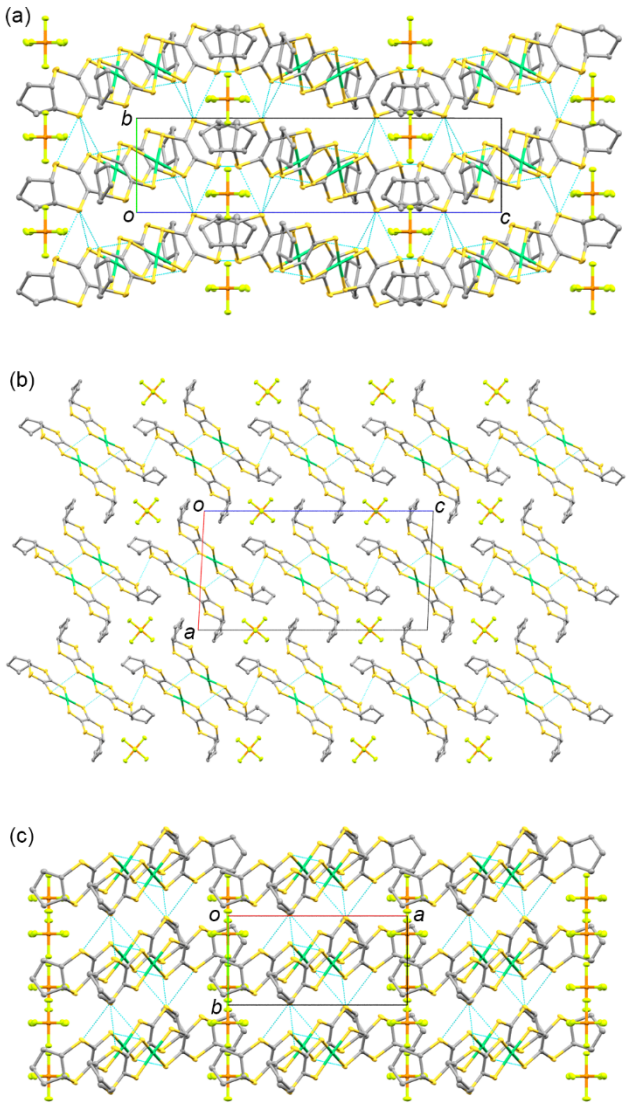

Figure S2. Crystal structure of **10** along (a) the a, (b) *b*, and (c) *c* axes. Hydrogen atoms are omitted for clarity. Dashed lines indicate sulfur–sulfur distances shorter than the sum of the van der Waals radius (< 3.70 Å).

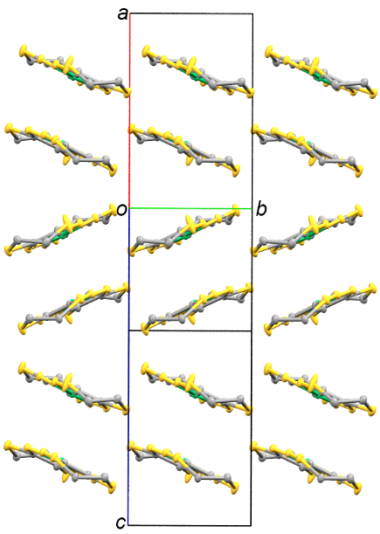

Figure S3. Molecular arrangement of the [Ni(dddt)$_2$] moiety of the donor molecules in Crystal **9** viewed along the end-on direction.
