Figure S1: Table showing composition from EDS mapping of the (a) ZnO+10%mol Au, (b) ZnO+20%mol Au, and (c) ZnO+30%mol Au films. This shows the actual amount of Au in the films after deposition.

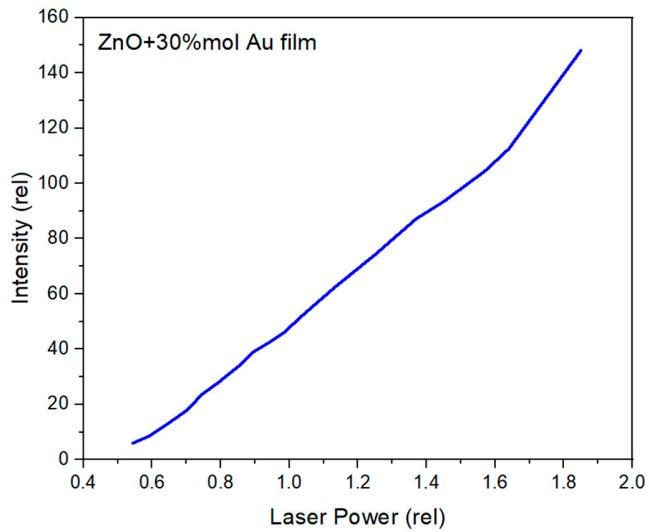

Figure S2: Initial second harmonic generation (SHG) measurements for the ZnO+30%mol Au film. There is no SHG behavior due to a linear relationship between power and intensity.

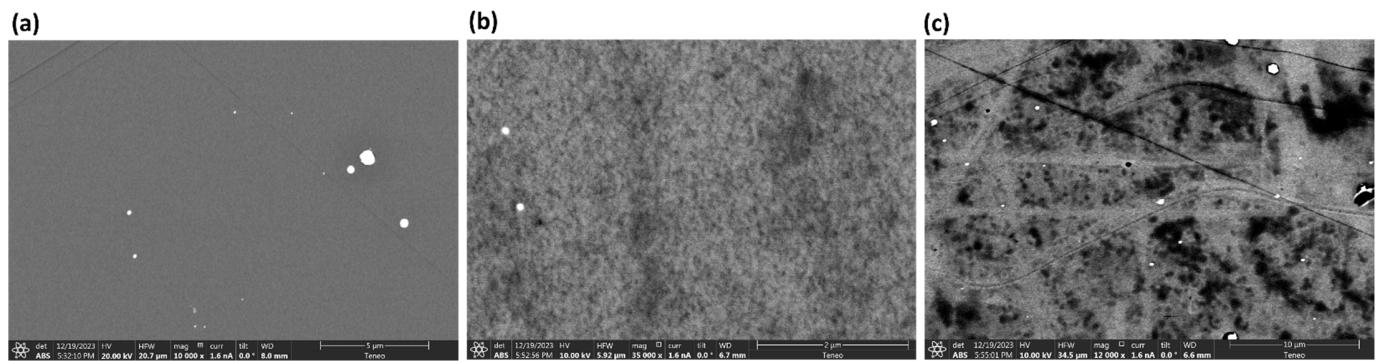

Figure S3: Backscattered electron (BSE) SEM images of the (a) 10% Au, (b) 20% Au, and (c) 30% Au samples. The bright contrast spots are the Au while the gray contrast area is the ZnO.
