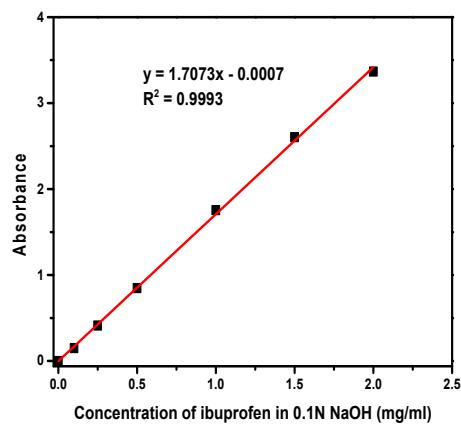

Figure S1. Calibration line of ibuprofen in 0.1 N NaOH solution.

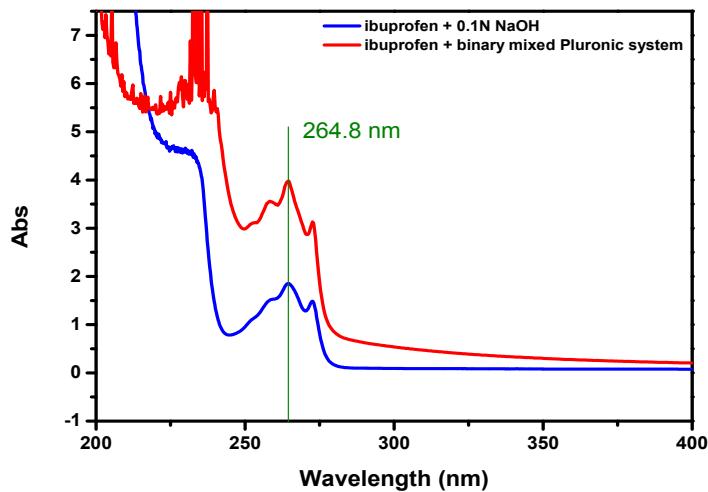

Figure S2. UV absorbance spectra of ibuprofen in different solvents. (blue line) in 0.1 N NaOH solution. (red line) in binary mixed Pluronic system.

There are some other studies in literature using UV-Vis technique to characterize physical-chemical properties of ibuprofen, such as the absorbance peak maximum λ_{max} . For example, Kesur et al. [1] found the $\lambda_{\text{max}} = 265 \text{ nm}$ for ibuprofen dissolved in 0.1N NaOH solution. Sunaric et al. [2] found the $\lambda_{\text{max}} = 264 \text{ nm}$ for ibuprofen dissolved methanol.

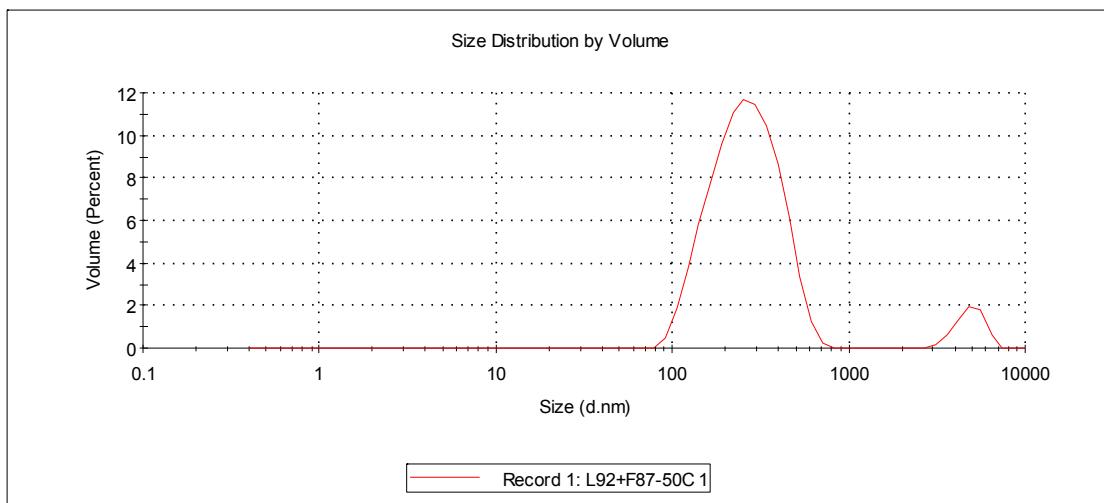

Figure S3. Volume based size distribution of system L92 + F87 at 50 °C

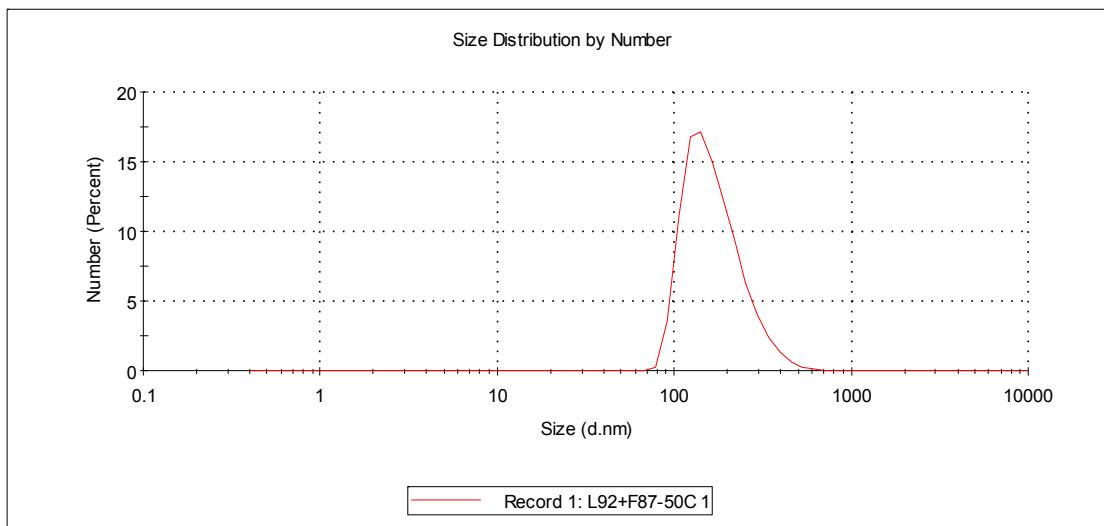

Figure S4. Number based size distribution of system L92 + F87 at 50 °C

Table S1. Hydrodynamic Diameters of neat F108, L92 and binary mixed system – 0.5wt% L92 + 1wt% F108.

Systems	0.5wt% L92		1wt% F108		0.5 wt% L92 + 1 wt% F108
