

Table S1. Physical properties of three solvents used in this study and those of the P3HT solutions.

Solvent	CF	CB	TCB
Viscosity (cp)	0.45	0.91	1.93
Boiling point (°C)	61.20	131.70	214.00
Solubility parameter (cal cm ⁻³) ^{1/2}	9.50	9.30	9.90
Dielectric constant (-)	4.81	4.62/5.62	2.24
Conductivity (S cm ⁻¹)	1×10 ⁻¹⁰	7.0×10 ⁻¹¹	1.62×10 ⁻⁴
Surface tension (dyne cm ⁻¹)	26.53	33.28	39.10
P3HT Solution	CF	CB	TCB
Viscosity (cp)	6.22	5.40	21.00
Relative viscosity (-)	13.82	5.91	10.88

Table S2. State-of-the-art electrical performances of pure P3HT electrospun nanofiber-based organic field-effect transistors.

Reference	Method	Core	Shell	Thermal annealing temperature	Mobility (cm² V⁻¹ s⁻¹)
<i>Synth. Met.</i> , 2005 , 151, 275.	single capillary electrospinning	P3HT in chloroform	N/A	N/A	4.00 ×10 ⁻⁴
<i>J. Mater. Chem.</i> , 2009 , 19, 743.	core-shell electrospinning	P3HT in chloroform	chloroform	N/A	1.70 ×10 ⁻²
<i>Macromolecules</i> , 2011 , 44, 2883.	core-shell electrospinning	P3HT in chlorobenzene	PMMA in chlorobenzene	100 °C	1.92 ×10 ⁻¹
<i>Adv. Electron. Mater.</i> 2015 , 1: 1400028.	core-shell electrospinning and secondary electric field	P3HT in chloroform	PEO ^a in chlorobenzene	N/A	1.62 ×10 ⁻¹
This work	core-shell electrospinning	P3HT in chloroform	PMMA in chlorobenzene	100 °C	3.57×10 ⁻¹

^aPoly(ethylene oxide) (PEO)
