Figure S1. Typical physical property evolution of woven PE, woven PPP, and woven PA in the isothermal–isobaric (NPT) ensemble. (**a**) Radius of gyration evolution of woven PE, woven PPP, and woven PA in the NPT ensemble; (**b**) Volume evolution of woven PE, woven PPP, and woven PA in the NPT ensemble; (**c**) Density evolution of woven PE, woven PPP, and woven PA in the NPT ensemble; (**d**) Total energy evolution of woven PE, woven PPP, and woven PA in the NPT ensemble; (**d**) Total energy evolution of woven PE, woven PPP, and woven PA in the NPT ensemble; (**d**) Total energy evolution of woven PE, woven PPP, and woven PA in the NPT ensemble.

Figure S2. The pristine structure of PE-CNT, PE-BN, and PE-Cu. (**a**) Main view of PE-CNT; (**b**) Lateral view of PE-CNT; (**c**) Main view of PE-BN; (**d**) Lateral view of PE-BN; (**e**) Main view of PE-Cu; (**f**) Lateral view of PE-Cu.

Figure S3. Typical physical property evolution of PE-CNT, PE-BN, and PE-Cu in the isothermal–isobaric (NPT) ensemble. (**a**) The volume evolution of PE-CNT, PE-BN, and PE-Cu in the NPT ensemble; (**b**) The total energy evolution of PE-CNT, PE-BN, and PE-Cu in the NPT ensemble.

Figure S4. Steady state energy tally and temperature distribution in non-equilibrium molecular dynamics simulation for PE-CNT, PE-BN, and PE-Cu. (**a**) Steady state energy tally of PE-CNT; (**b**) Steady state temperature distribution of PE-CNT; (**c**) Steady state energy tally of PE-BN; (**d**) Steady state temperature distribution of PE-BN; (**e**) Steady state energy tally of PE-Cu; (**f**) Steady state temperature distribution of PE-Cu.
