Not suitable filaments

Suitable filaments

Figure S1: Suitable and not suitable filaments.

Figure S2: Examples of non-suitable scaffolds. (A) Little extrusion: PCL+25%HA 198–202 °C. (B) Not enough extrusion: filament interruption PCL+15%HA 182–184 °C. (C) Material sticks around the nozzle, causing midway clog: bottom layers are ok but top layers show poor filament extrusion: PCL+20%HA at 110 mm/s speed 196–198 °C. (D) Small pore size (<550 μm): PCL+15%HA 186–187 °C. (E) Small pore size due to extruded material melted close together: PCL+20%HA 199–

200 °C. (F) Extruded material melt together due to too high temperature: PCL 200°C.

Figure S3: All suitable scaffolds (n = 10). (A) PCL scaffolds. (B) PCL+5%HA. (C) PCL+10%HA. (D) PCL+15%HA. (E) PCL+20%HA. (F) PCL+25%HA.
