

## Supplementary Materials

**Table S1.** Antimicrobial action of nanoparticles and their fields of application in dentistry.

Nanoparticles	Antimicrobial action	Intended area of application	References
Silver nanoparticles	Activity against <i>Streptococcus mutans</i> , <i>Staphylococcus aureus</i> and <i>Escherichia coli</i> bacteria	Coatings for orthodontic appliances	[37]
	Activity against <i>Enterococcus faecalis</i> bacteria	Additives to endodontic sealer	[50]
	Activity against <i>Streptococcus mutans</i> bacteria	Components of toothpastes for the prevention of caries	[59]
	Inhibition of the growth of <i>Streptococcus mutans</i> , <i>Streptococcus salivarius</i> and <i>Lactobacillus acidophilus</i> bacteria	Additives to filling and restorative materials, adhesives for tooth restoration in dental therapy	[66]
	Inhibition of the growth of <i>Streptococcus mutans</i> bacteria	Fillers for dental restoration in dental therapy	[67]
	Activity against <i>Streptococcus mutans</i> bacteria	Components of self-etch adhesive system in dental therapy	[68]
	Activity against <i>Treponema denticola</i> bacteria	Additives to light-curing composite for orthodontic retainers	[69]
	Activity against <i>Staphylococcus aureus</i> and <i>Staphylococcus epidermidis</i> bacteria	Treatment of periodontal tissue diseases	[71]
	Activity against <i>Streptococcus mutans</i> , <i>Streptococcus sobrinus</i> and <i>Lactobacillus acidophilus</i> bacteria	Additives to orthodontic adhesives	[84], [85]
	Inhibition of the growth of biofilms cariogenic <i>Streptococcus mutans</i> , <i>Streptococcus sanguis</i> , <i>Lactobacillus acidophilus</i> bacteria	Components of composite resins used in fixed orthodontic retainers	[86]
Nanodiamond	Activity against <i>Candida albicans</i> fungi	Additives to materials for the manufacture of dentures and dental implants	[91]
	Inhibition of the growth of biofilm <i>Candida glabrata</i> fungi	Additives to materials for the manufacture of dentures and dental implants	[92]
	Activity against <i>Candida albicans</i> fungi	Component of resins for the manufacture of dentures	[51]
	Activity against anaerobic <i>Streptococcus mutans</i> , <i>Streptococcus mitis</i> and <i>Lactobacillus spp.</i> bacteria	Fillers of polymer fillings for one-stage caries treatment	[72]
	Inhibition of the growth of biofilm <i>Candida albicans</i> fungi	Component of orthodontic resins for the manufacture and repair of orthodontic appliances	[88]
	Inhibition of the growth of <i>Streptococcus mutans</i> bacteria	Component of resins for the manufacture of orthodontic attachments, brackets	[88]
	Reduction viability <i>Streptococcus mutans</i> bacteria	Component of resins for the manufacture of dentures	[94]

Zinc(II) oxide nanoparticles	Activity against <i>Streptococcus mutans</i> bacteria	Additives to restorative glass ionomer cements used in dental therapy	[41]
	Activity against <i>Streptococcus mutans</i> , <i>Enterococcus faecalis</i> and <i>Lactobacillus fermentum</i> bacteria, and <i>Candida albicans</i> fungi	Treatment of caries in dental therapy and endodontics	[73]
	Activity against <i>Porphyromonas gingivalis</i> and <i>Actinomyces naeslundii</i> bacteria	Additives to sealants for endodontic treatment of apical periodontitis	[74]
	Activity against <i>Streptococcus mutans</i> and <i>Lactobacillus acidophilus</i> bacteria	Components of adhesives for tooth restoration in dental therapy	[75]
	Inhibition of the metabolic activity of biofilms cariogenic <i>Streptococcus mutans</i> , <i>Streptococcus sobrinus</i> and <i>Lactobacillus acidophilus</i> bacteria after photoactivation	Components of orthodontic adhesive for fixing orthodontic appliances	[90]
Titanium(IV) oxide nanoparticles	Activity against <i>Streptococcus mutans</i> bacteria	Components of orthodontic adhesive for fixing orthodontic appliances	[26]
	Activity against <i>Streptococcus mutans</i> bacteria	Additives to light-curing adhesives for dental restorations	[52]
	Activity against <i>Staphylococcus aureus</i> and <i>Escherichia coli</i> bacteria	Fillers for maxillofacial prostheses	[98]
Zirconium(IV) oxide nanoparticles	Activity against <i>Streptococcus mutans</i> and <i>Streptococcus sobrinus</i> bacteria	Fillers for filling and restorative materials in dental therapy	[77], [78]
	Enamel remineralization in caries-like enamel lesions induced by <i>Streptococcus mutans</i> biofilm	Fillers for filling and restorative materials in dental therapy	[79]
Hydroxyapatite nanoparticles	Activity against <i>Enterococcus faecalis</i> and <i>Streptococcus mitis</i> bacteria	Components of root canal filling materials	[80]
Bioactive glass nanoparticles	Activity against gram-positive bacteria <i>Streptococcus mutans</i>	Components of orthodontic adhesive for fixing orthodontic appliances	[58]
	Inhibition of the growth of <i>Candida albicans</i> fungi	Components of soft-denture liners	[61]
Copper (II) oxide nanoparticles	Inhibition of the growth of <i>Candida dubliniensis</i> fungi, <i>Streptococcus salivarius</i> , <i>Streptococcus sanguis</i> , <i>Streptococcus mutans</i> bacteria	Components of partial and complete removable dentures	[98]
	Inhibition of the growth of <i>Streptococcus mutans</i>	Components of orthodontic composite resins	[58]
Calcium fluoride nanoparticles	Remineralization ability to protect enamel under biofilm <i>Streptococcus mutans</i> bacteria	Fillers for filling and restorative materials in dental therapy	[59]
Calcium phosphate nanoparticles	Remineralization ability to protect enamel under biofilm <i>Streptococcus mutans</i> bacteria	Fillers for filling and restorative materials in dental therapy	[83]
Chitosan nanoparticles	Inhibition of the growth of <i>Candida albicans</i> fungi, <i>Streptococcus mutans</i> , <i>Pseudomonas aeruginosa</i> and <i>Enterococcus faecalis</i> bacteria	Components of tissue conditioner	[93]
Halloysite nanotubes	Inhibition of the growth of <i>Candida albicans</i> fungi	Components of partial and complete removable dentures	[97]

**Table S2.** Major dental pathogens.

Microorganism	Pathology caused by a microorganism
<i>S. mutans</i>	Caries, apical periodontitis, peri-implantitis
<i>E. faecalis</i>	Apical periodontitis
<i>S. mitis</i>	Caries, peri-implantitis
<i>Lactobacillus spp.</i>	Caries
<i>P. gingivalis</i>	Apical periodontitis, periodontitis, peri-implantitis
<i>A. naeslundii</i>	Apical periodontitis, periodontitis
<i>S. aureus</i>	Caries, periodontitis, peri-implantitis
<i>S. salivarius</i>	Caries, peri-implantitis
<i>L. acidophilus</i>	Caries
<i>C. albicans</i>	Oral candidosis, prosthetic stomatitis
<i>C. glabrata</i>	Oral candidosis, prosthetic stomatitis
<i>C. dubliniensis</i>	Oral candidosis, prosthetic stomatitis
<i>S. sanguis</i>	Caries, periodontitis
<i>T. denticola</i>	Periodontitis
<i>S. sobrinus</i>	Caries
<i>E. coli</i>	Caries

**Table S3.** Minimum inhibitory concentration (MIC).

Nanoparticles	Microorganisms	MIC, $\mu\text{g mL}^{-1}$	References
CuO NPs (18.3 nm)	<i>C. albicans</i>	64	
	<i>S. mutans</i>	128	
	<i>S. sobrinus</i>	128	[61]
	<i>S. salivarius</i>	64	
Ag NPs	<i>S. mutans</i>	12.5	[68]
	<i>S. mutans</i>	0.625	
	<i>E. faecalis</i>	0.312	[73]
ZnO NPs (20 nm)	<i>L. fermentum</i>	5	
	<i>C. albicans</i>	10	
ZnO NPs (40 nm)	<i>S. mutans</i>	1.04	
	<i>E. faecalis</i>	0.625	[73]
	<i>L. fermentum</i>	10	
	<i>C. albicans</i>	>10	
ZnO NPs (140 nm)	<i>S. mutans</i>	1.66	
	<i>E. faecalis</i>	1.25	
	<i>L. fermentum</i>	>10	[73]
C. albicans	<i>C. albicans</i>	>10	
	<i>P. gingivalis</i>	10	
ZnO NPs (10 nm)	<i>A. naeslundii</i>	40	[74]
MgO NPs (20 nm)	<i>S. mutans</i> , <i>S. sobrinus</i>	500	[78]
ZnO NPs (38.19 nm)	<i>S. mutans</i>	32	
Cs NPs (82.87 nm)	<i>S. mutans</i>	2048	
ZnO NPs + Cs NPs (185.7 nm)	<i>S. mutans</i>	1024	[81]
TiO <sub>2</sub> NPs (17 nm)	<i>S. salivarius</i> , <i>S. sanguis</i> , <i>C. dubliniensis</i>	32-64	[97]
CuO NPs (40 nm)			

**Table S4.** Surface roughness values ( $R_a$ ).

Materials	Surface roughness, nm	References
Heat-polymerized (control)	150±10	
Acrylic resin reinforced with 0.5 wt.% ND	60±10	[44]
Heat-cured PMMA (control)	150±10	
Heat-cured PMMA + 5 wt. % $ZrO_2$ NPs	200±10	[45]
Heat-polymerized acrylic resin Major base 20 (control)	129±11	
Heat-polymerized acrylic resin Major base 20 + 0.5 wt. % ND	39±9	[51]
Composite resin Filtek Z350 XT (control)	190±10	
Composite resin Filtek Z350 XT + 2 wt. % $TiO_2$ NPs	220±10	[76]
Orthodontic acrylic resin system Ortho-Jet (control)	146.792±22.06	
Orthodontic acrylic resin system Ortho-Jet + 0.1 wt. % ND	162.502±4.24	[88]
Acrylate-based resin PMMA material (control)	470±110	
Acrylate-based resin PMMA material + 0.1 wt. % ND powder	480±160	[89]
Untreated PMMA (control)	123±15	
PMMA + 3 wt. % Ag NPs	61±6	[90]
PMMA + 3.5 wt. % Ag NPs	41±3	
Untreated PMMA (control)	142±38	
PMMA + 1 wt. % $TiO_2$ NPs	65±15	
PMMA + 3 wt. % $TiO_2$ NPs	40±10	[96]
PMMA + 1 wt. % HNTs	38±10	
PMMA + 3 wt. % HNTs	15±2	
Neat silicone (control)	567±10.8	
Silicone + 1 % wt. $ZrO_2$ nanopowder	570±6.3	[100]
