

Supplementary material

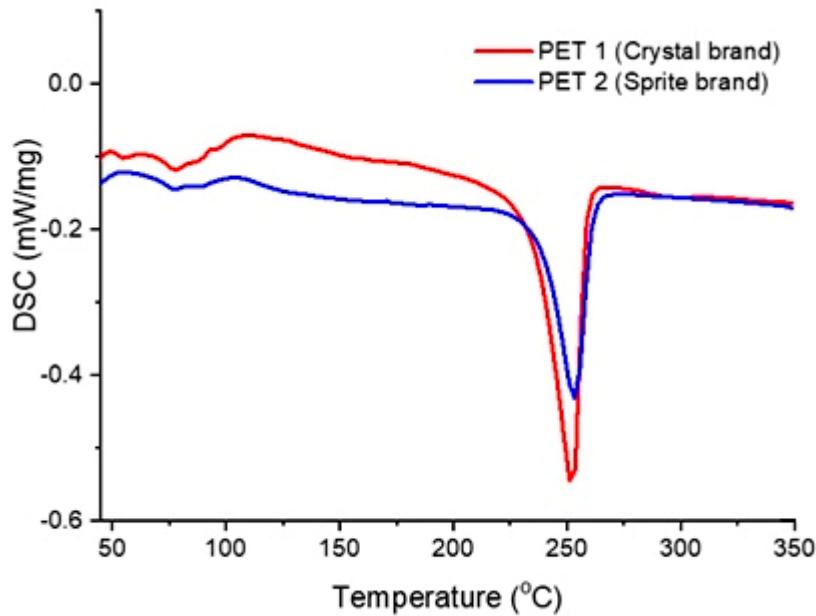

Figure S1. The thermograms for PET1 (Crystal brand) and PET2 (Sprite brand) fragments, with melting temperatures of 251.12 °C for PET1 and 253.41 °C for PET2.

$$X_c = \frac{\Delta H_m}{\Delta H_{mc}} \times 100 X_c = \frac{\Delta H_m}{\Delta H_{mc}} \times 100 X_c = \frac{\Delta H_m}{\Delta H_{mc}} \times 100 \quad (S1)$$

Equation S1. Percentage calculation of the crystallinity of the samples, where ΔH_m is the sample melting enthalpy and ΔH_{mc} is the melting heat of crystalline PET.

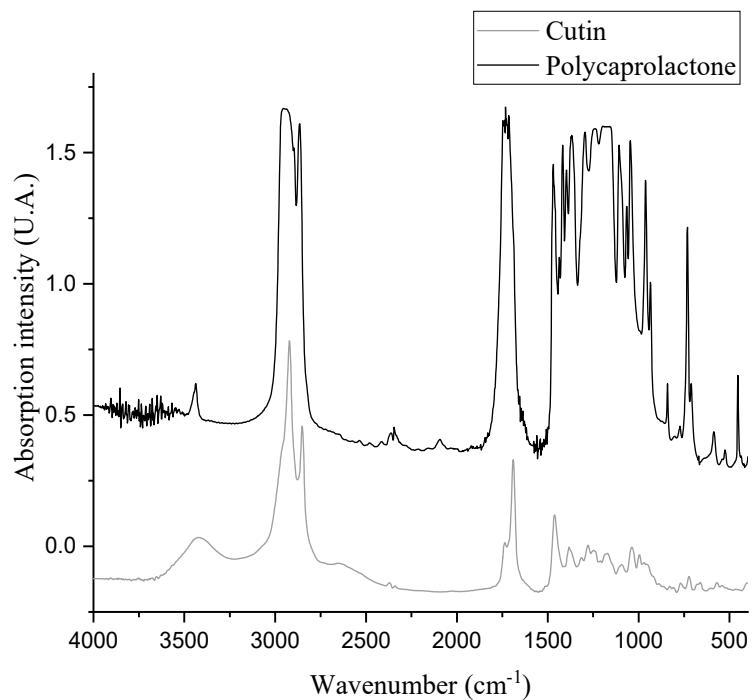

Figure S2. Infrared absorption spectra for Polycaprolactone (in dichloromethane) and powdered cutin extracted from *Fuji* apple peels. The samples were prepared in KBr tablets.

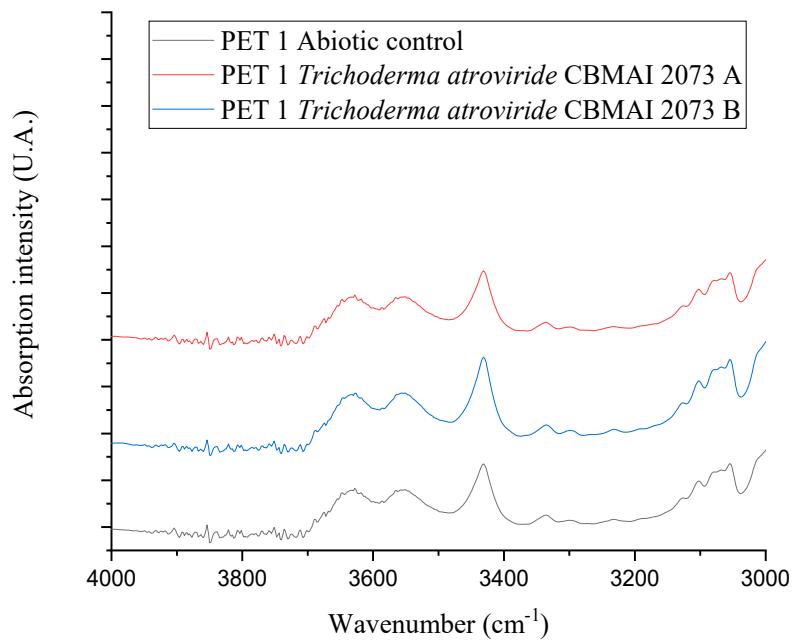

Figure S3. A. FTIR spectra of the 4000 cm⁻¹ to 3000 cm⁻¹ region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET1.

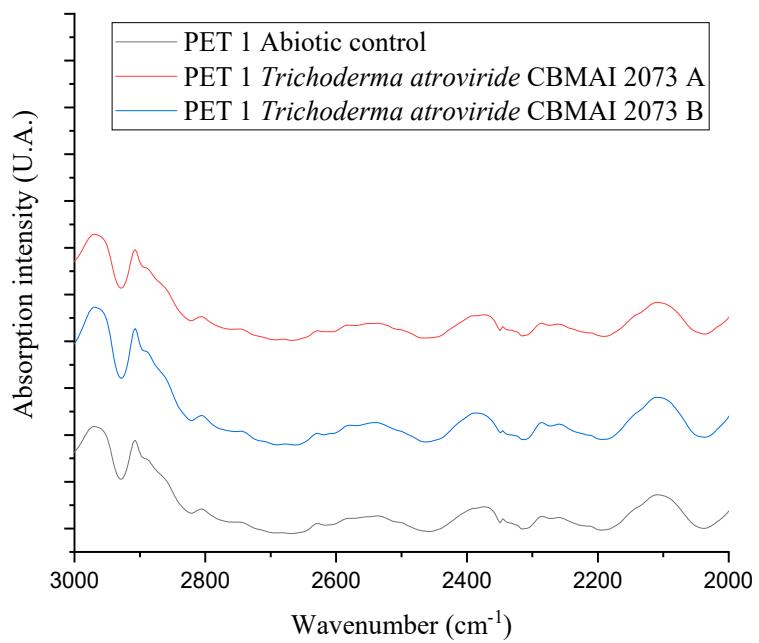

Figure S3. B. FTIR spectra of the 3000 cm^{-1} to 2000 cm^{-1} region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET1.

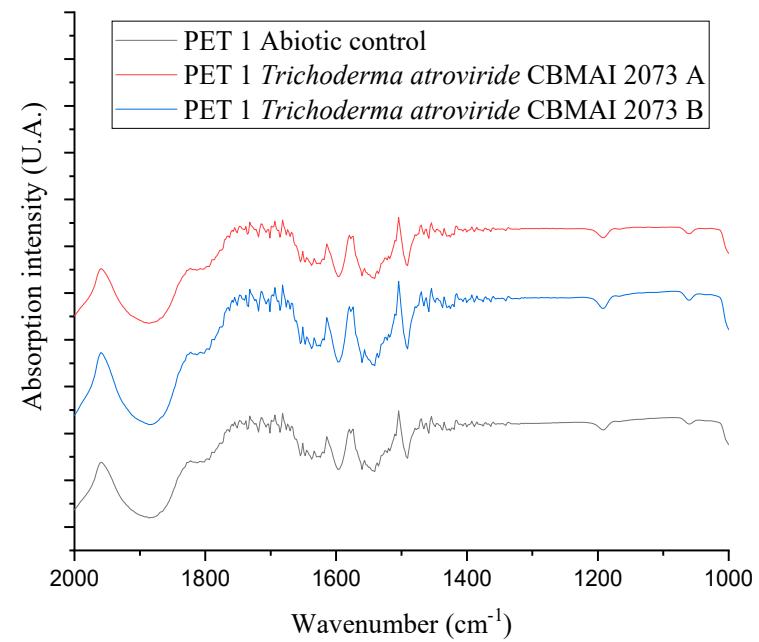

Figure S3. C. FTIR spectra of the 2000 cm^{-1} to 1000 cm^{-1} region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET1.

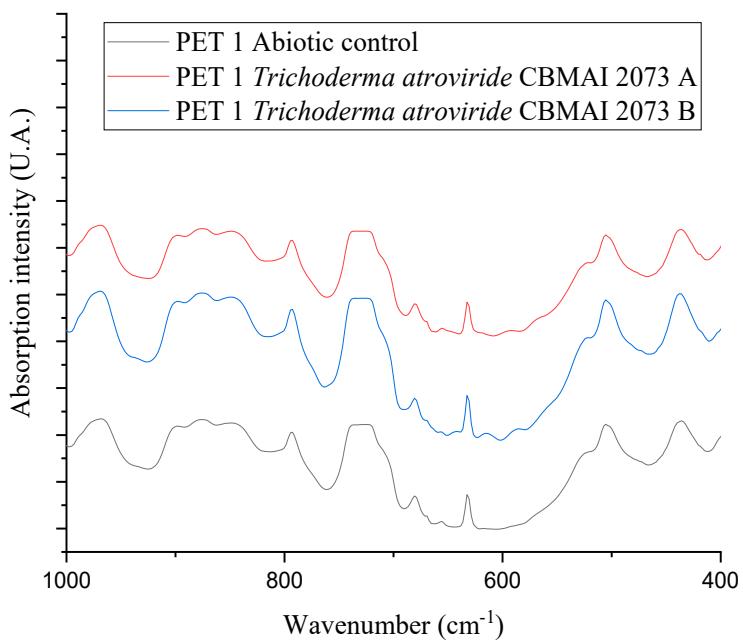

Figure S3. D. FTIR spectra of the 1000 cm⁻¹ to 400 cm⁻¹ region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET1.

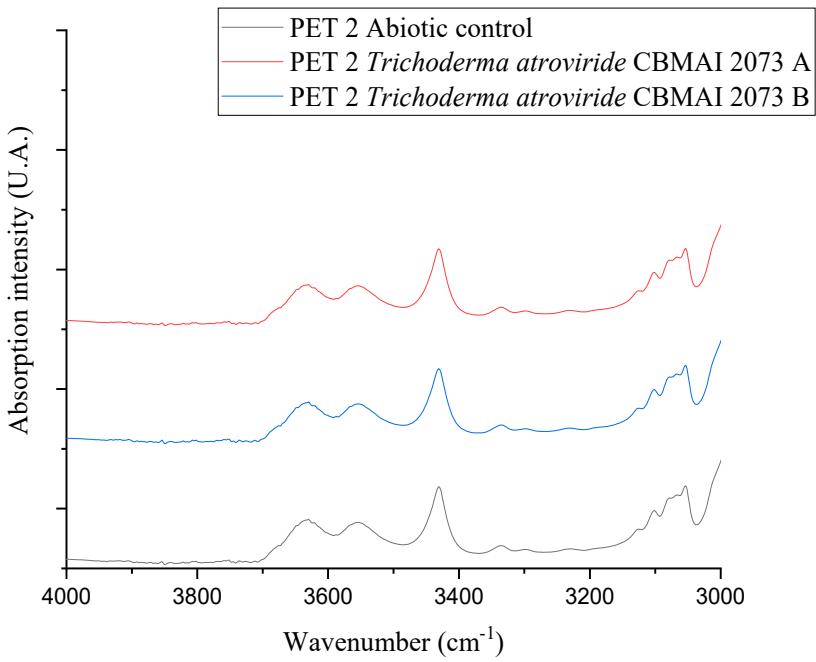

Figure S3. E. FTIR spectra of the 4000 cm⁻¹ to 3000 cm⁻¹ region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET2.

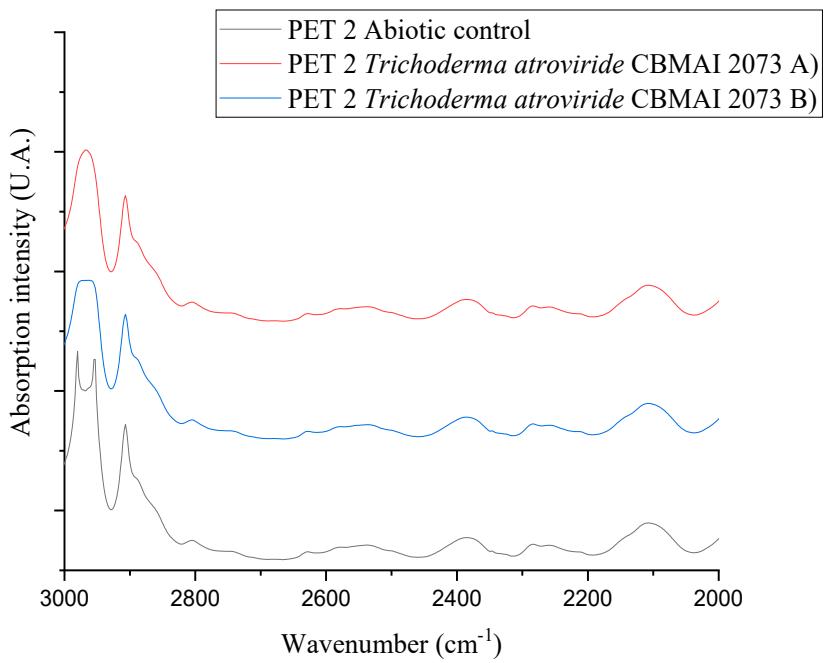

Figure S3. F. FTIR spectra of the 3000 cm^{-1} to 2000 cm^{-1} region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET2.

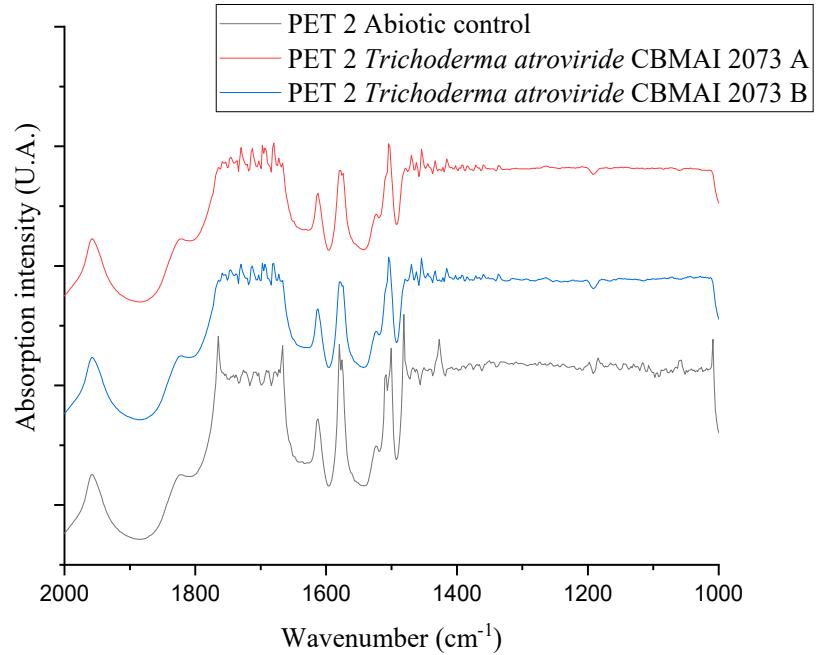

Figure S3. G. FTIR spectra of the 2000 cm^{-1} to 1000 cm^{-1} region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET2.

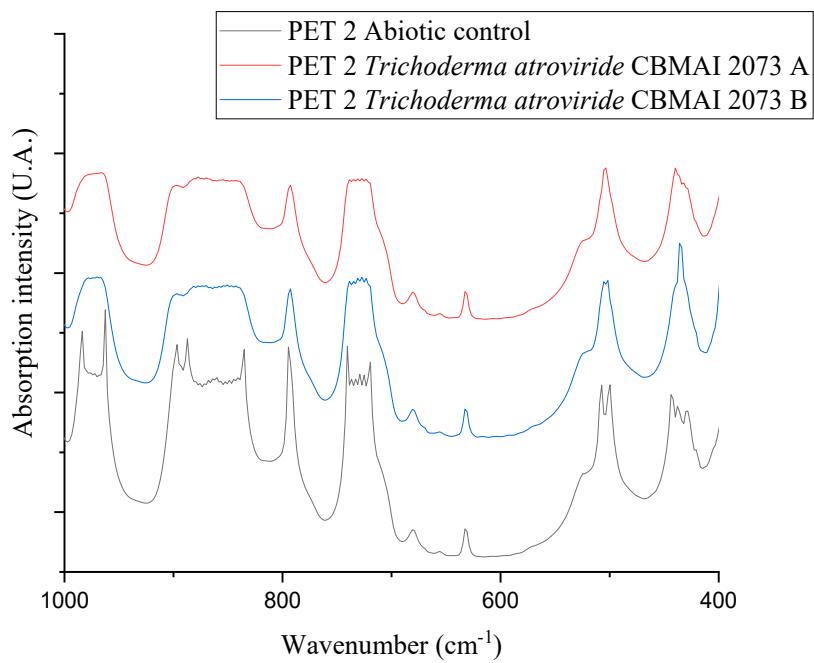

Figure S3. H. FTIR spectra of the 1000 cm^{-1} to 400 cm^{-1} region of the treatment with the isolate *Trichoderma* sp CBMAI 2073 in PET2.

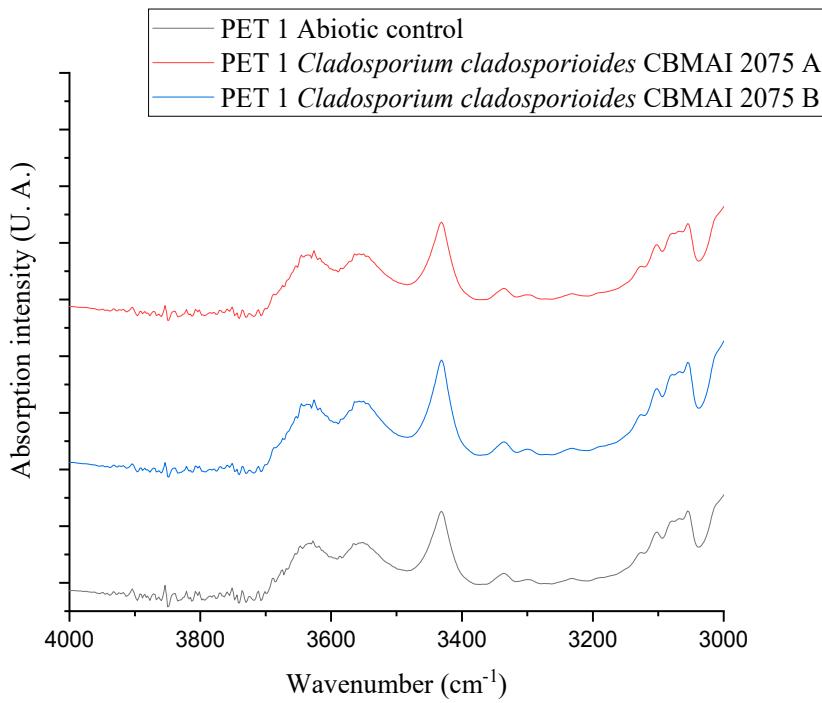

Figure S3. I. FTIR spectra of the 4000 cm^{-1} to 3000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET1.

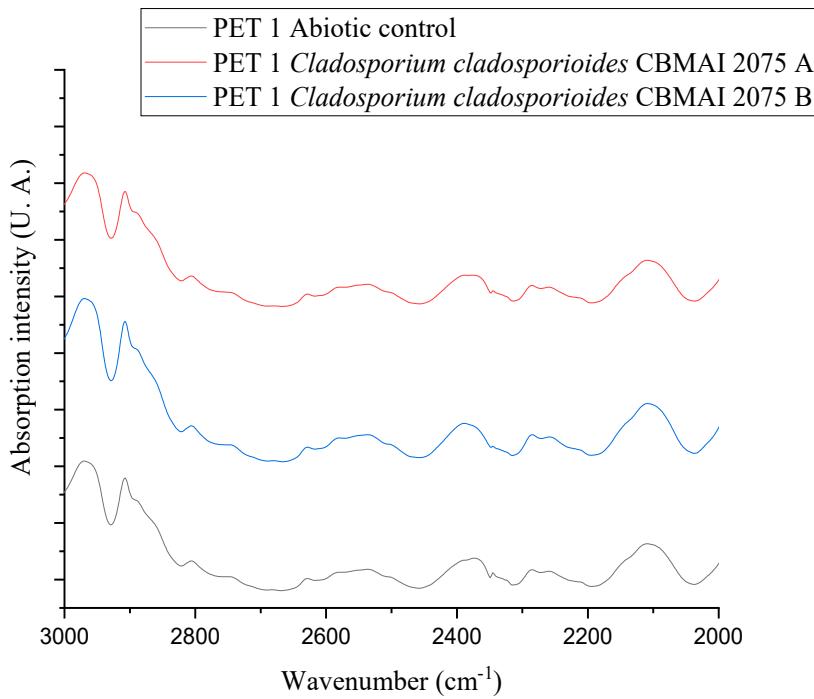

Figure S3. J. FTIR spectra of the 3000 cm^{-1} to 2000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET1.

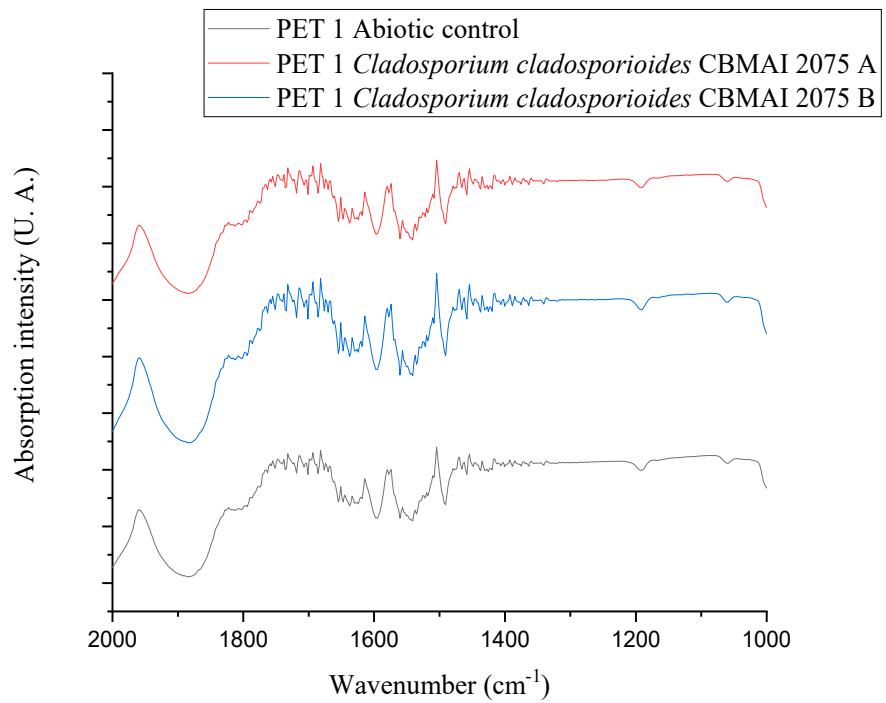

Figure S3. K. FTIR spectra of the 2000 cm^{-1} to 1000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET1.

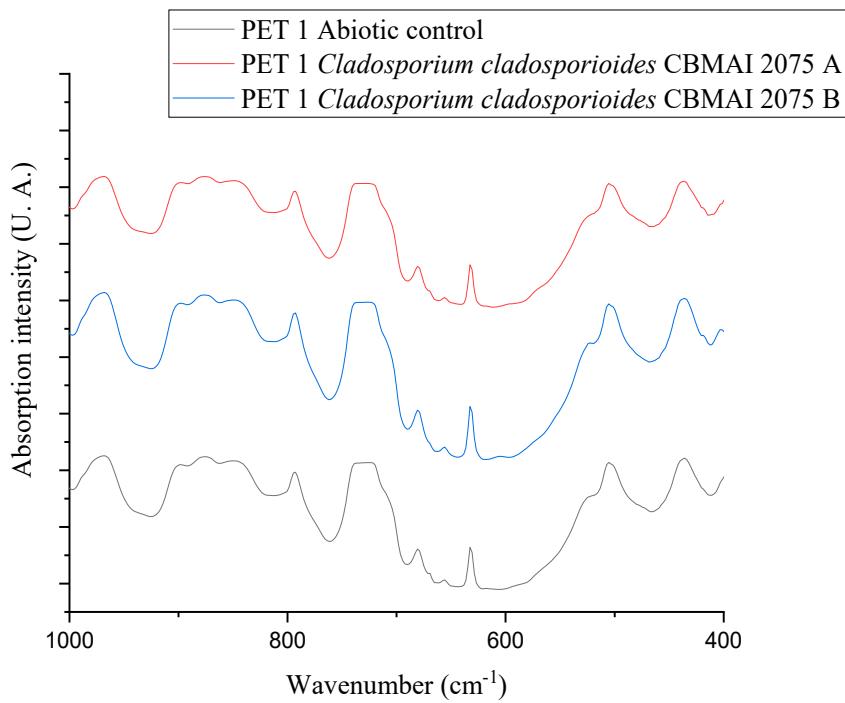

Figure S3. L. FTIR spectra of the 1000 cm^{-1} to 400 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET1.

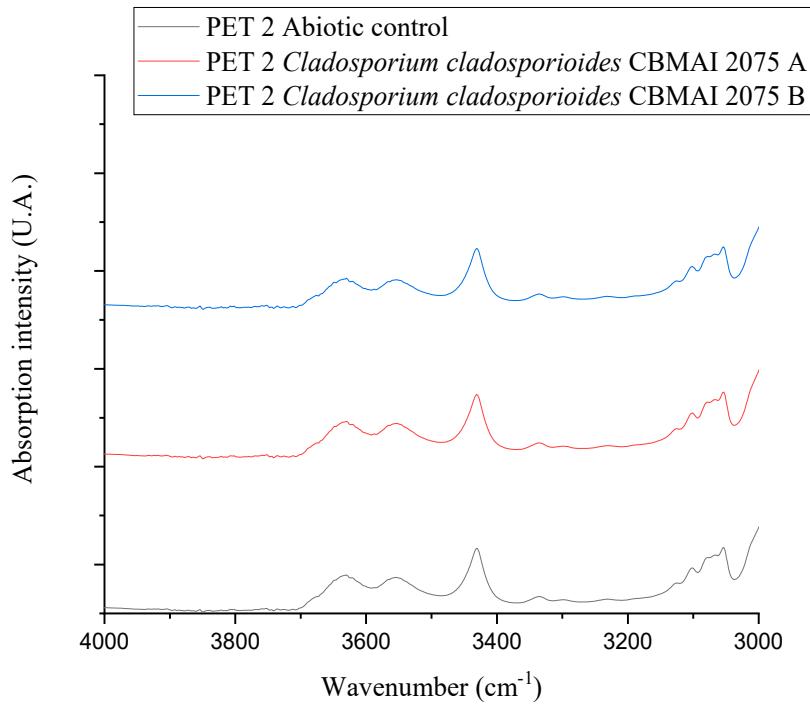

Figure S3. M. FTIR spectra of the 4000 cm^{-1} to 3000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET2.

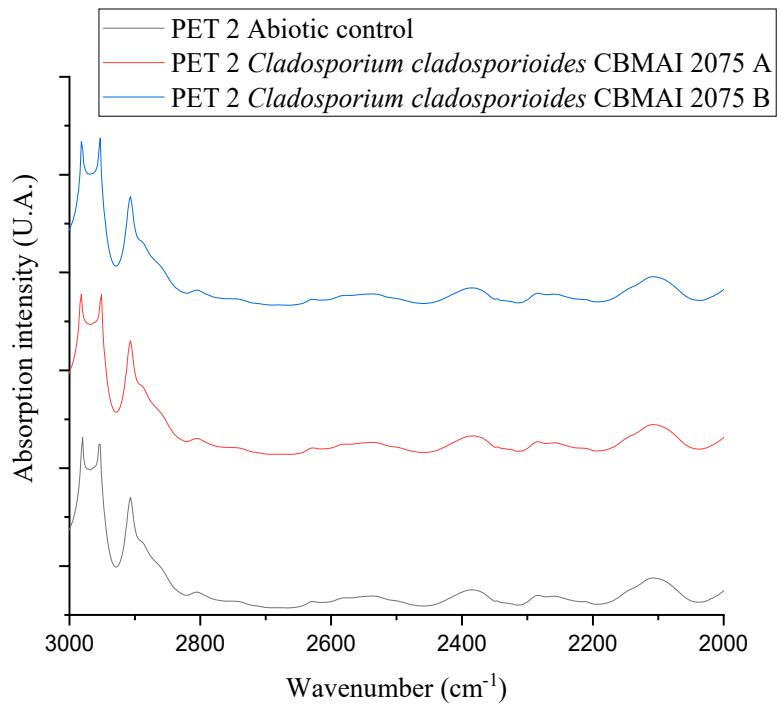

Figure S3. N. FTIR spectra of the 3000 cm^{-1} to 2000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET2.

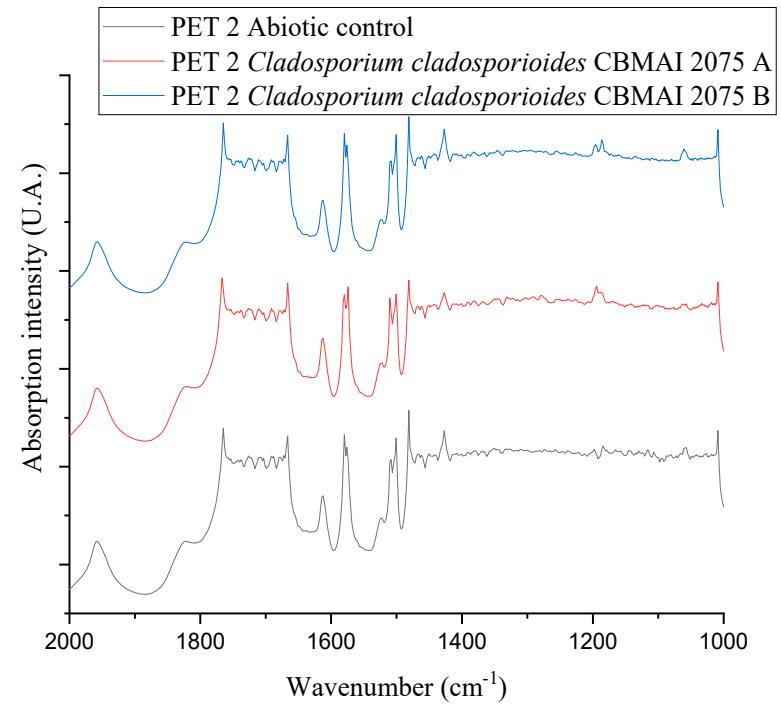

Figure S3. O. FTIR spectra of the 2000 cm^{-1} to 1000 cm^{-1} region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET2.

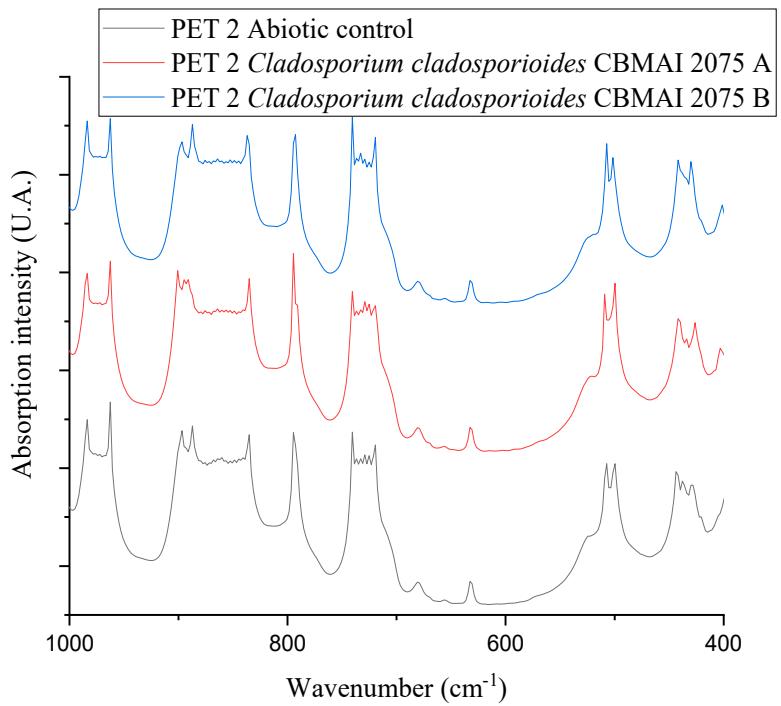

Figure S3. P. FTIR spectra of the 1000 cm⁻¹ to 400 cm⁻¹ region of the treatment with the isolate *Cladosporium cladosporioides* CBMAI 2075 in PET2.

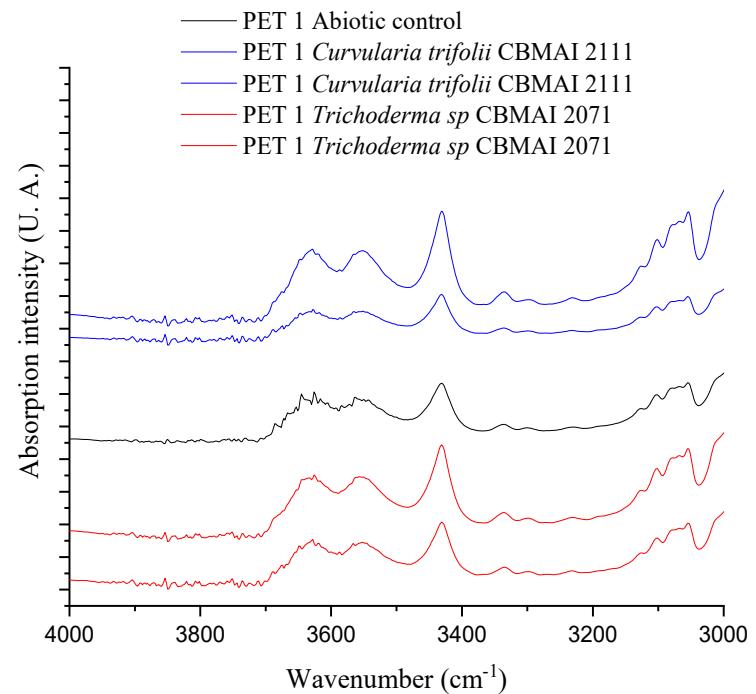

Figure S4. A. FTIR spectra of the 4000 cm⁻¹ to 3000 cm⁻¹ region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET1.

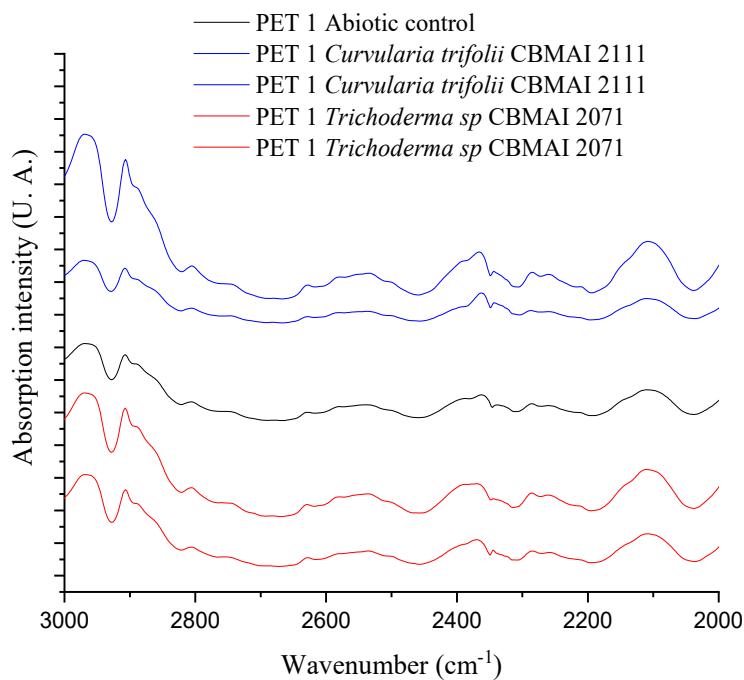

Figure S4. B. FTIR spectra of the 3000 cm⁻¹ to 2000 cm⁻¹ region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET1.

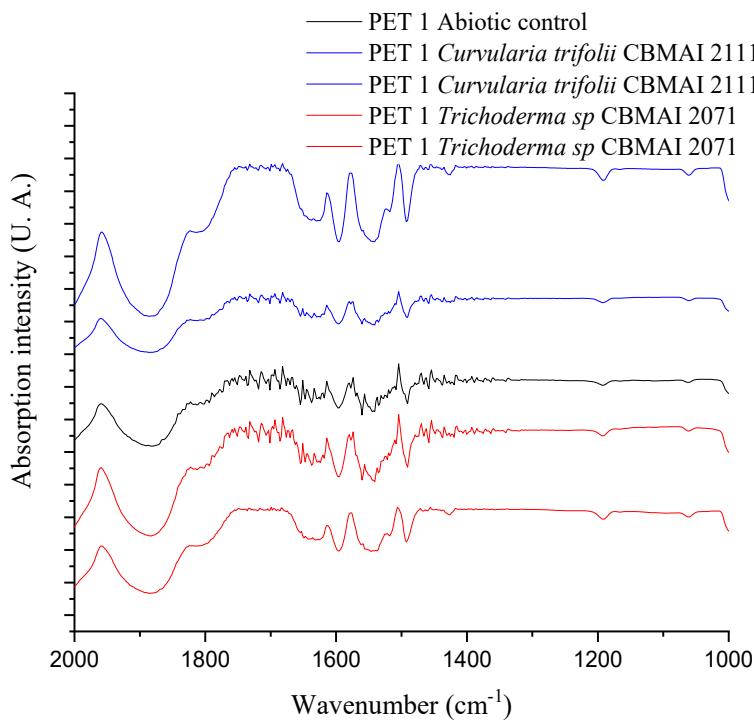

Figure S4. C. FTIR spectra of the 2000 cm⁻¹ to 1000 cm⁻¹ region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET1.

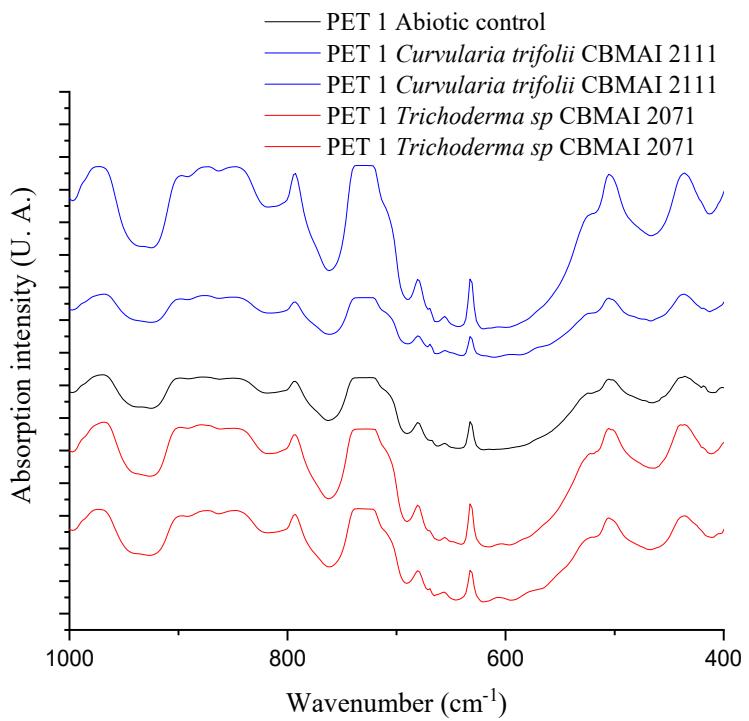

Figure S4. D. FTIR spectra of the 1000 cm^{-1} to 400 cm^{-1} region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET1.

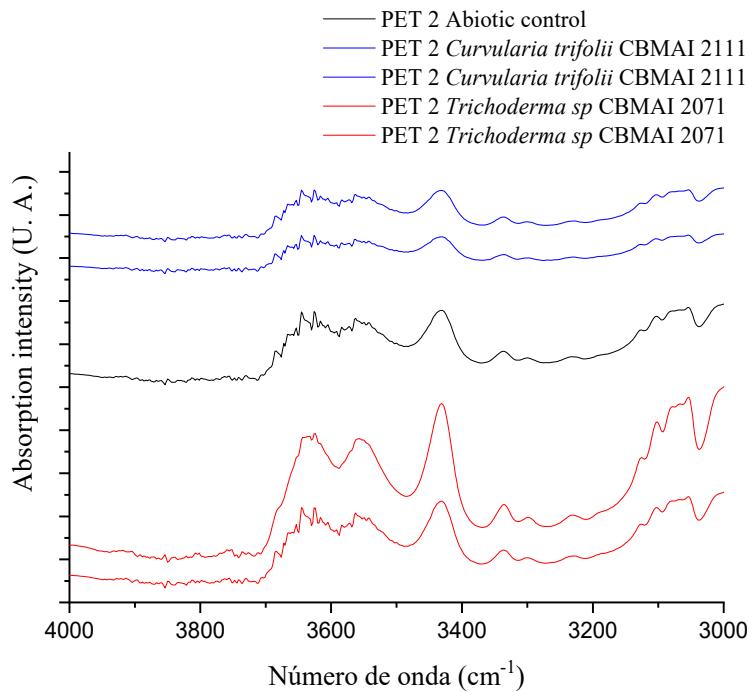

Figure S4. E. FTIR spectra of the 4000 cm^{-1} to 3000 cm^{-1} region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET2.

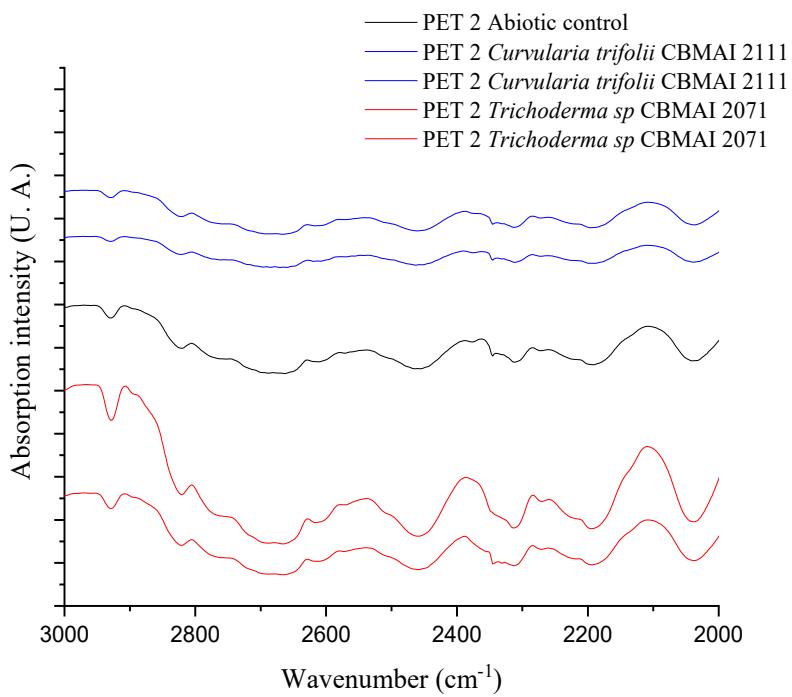

Figure S4. F. FTIR spectra of the 3000 cm⁻¹ to 2000 cm⁻¹ region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma* sp CBMAI 2071 in PET2.

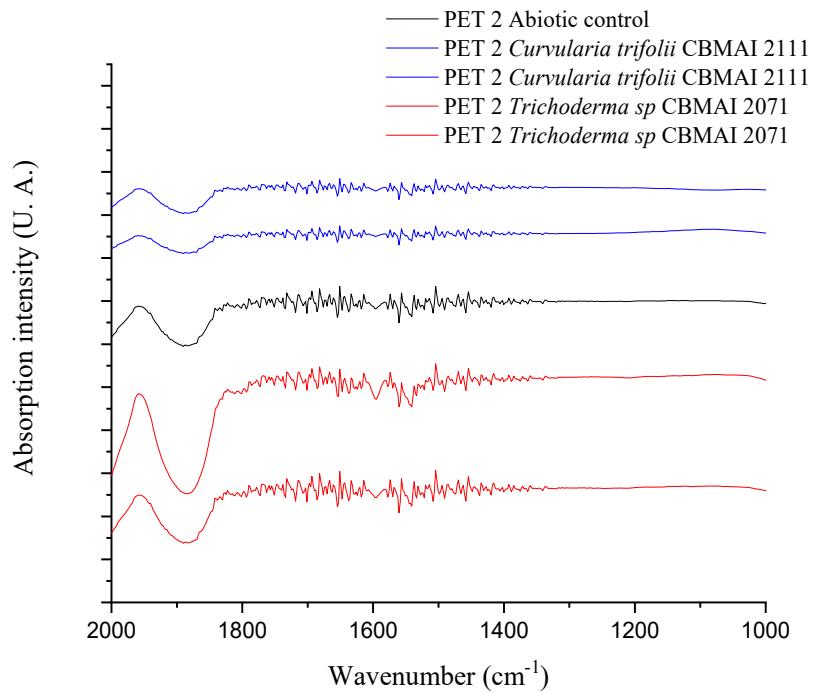

Figure S4. G. FTIR spectra of the 2000 cm⁻¹ to 1000 cm⁻¹ region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma* sp CBMAI 2071 in PET2.

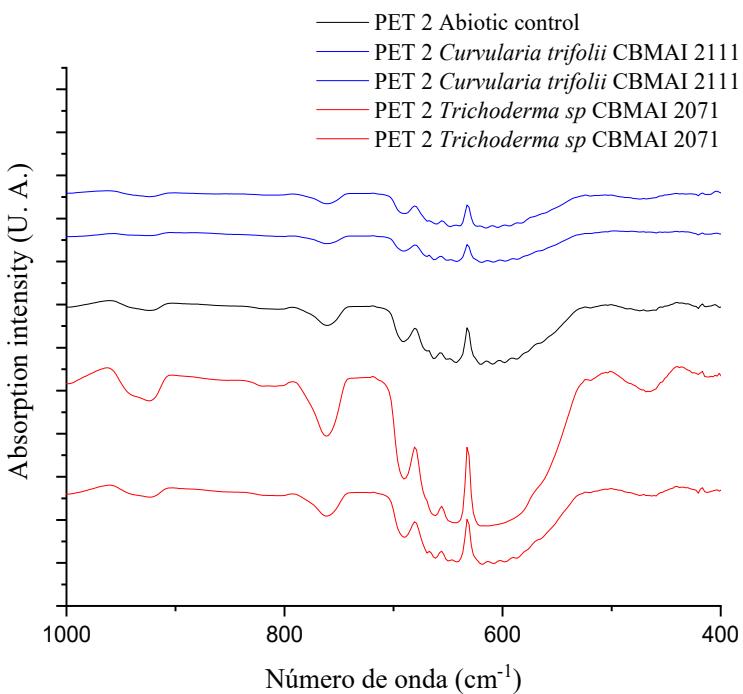

Figure S4. H. FTIR spectra of the 1000 cm^{-1} to 400 cm^{-1} region of the treatment with the isolates *Curvularia trifolii* CBMAI 2111 and *Trichoderma atroviride* CBMAI 2071 in PET2.

Table S1. Gradient programming applied to the chromatographic separations.

Time (minutes)	Mobile phase B (%)
0.01	80
5.0	40
13.0	50
16.0	0
24.0	0
25.0	80
30.0	80
35.0	80
40.0	80

Table S2. PET nanoparticle conversion (%) results after fifteen days of analysis.

Code	Identification	NP/PET conversion (%)*
CBMAI 2111	<i>Curvularia trifolii</i>	9.0±1.1
CBMAI 2073	<i>Trichoderma atroviride</i>	6.1±0.2
CBMAI 2071	<i>Trichoderma sp.</i>	3.6±0.8
CBMAI 2111	<i>Microsphaeropsis arundinis</i>	2.7±0.9
CBMAI 2109	<i>Microsphaeropsis arundinis</i>	2.0±0.4
LMA 1269	<i>Fusarium</i> sp.	1.9±0.5
CBMAI 2159	<i>Pseudallescheria</i> sp. (<i>Pseudallescheria</i> / <i>Scedosporium</i> complex)	1.9±1.0
CBMAI 2083	<i>Paecilomyces</i> sp.	1.7±0.7
CBMAI 2189	<i>Aspergillus fumigatus</i>	0.8±0.6
CBMAI 2075	<i>Cladosporium cladosporioides</i>	0.8±0.6
LMA1251	<i>Trichoderma</i> sp.	0.7±0.4
CBMAI 2158	<i>Paraconiothyrium cyclothyrioides</i>	0.7±0.1
CBMAI 2191	<i>Penicillium koreense</i>	0.7±0.1
CBMAI 2203	<i>Paraconiothyrium cyclothyrioides</i>	0.6±0.3
LMA 216	<i>Phoma herbarum</i>	0.6±0.6
LMA 28	<i>Aspergillus fumigatus</i>	0.5±0.0
LMA 1825	<i>Fusarium</i> sp.	0.4±0.0

LMA 1172	<i>Fusarium</i> sp.	0.4±0.0
CBMAI 2190	<i>Aspergillus fumigatus</i>	0.4±0.2
CBMAI 2186	<i>Talaromyces veerkampii</i>	0.3±0.2
CBMAI 2187	<i>Paraconiothyrium cyclothyrioides</i>	0.3±0.3
CBMAI 2149	<i>Trichoderma capillare</i>	0.3±0.0
CBMAI 2155	<i>Microsphaeropsis arundinis</i>	0.3±0.2
LMA 167	<i>Penicillium</i> sp.	0.3±0.1
LMA 11	<i>Paecilomyces-like</i>	0.2±0.0
LMA 1145	<i>Fusarium</i> sp.	0.1±0.0

*conversion results from NPPEt into HOPP expressed as mean percentage ± standard deviation (n = 3)

Table S3. Lipase and esterase activities determined by HTS with esterified fluorescent probes (results expressed as mean ± standard deviation, n = 4, analysis time of 96 h).

Strain	Conversion % (2-carbon probe)	Conversion % (8-carbon probe)
<i>C. trifolii</i> CBMAI 2111	11.9±0.1	10.8±2.1
<i>T. atroviride</i> CBMAI 2073	37.2±4.9	46.0±3.4
<i>Trichoderma</i> sp. CBMAI 2071	0.0±0.0	0.0±0.0
<i>C. cladosporioides</i> CBMAI 2075	41.66±0.8	41.2±0.9
