

Figure S1. Frequency distribution of seven traits in three RIL populations. TI = Teqing/IRBBs; ZM = Zhenshan 97/Milyang 46; XM = Xieqingzao/Milyang 46. BR = Brown rice recovery; MR = Milled rice recovery; HR = Head rice recovery; GY = Grain yield per plant; BRY = Brown rice yield per plant; MRY = Milled rice yield per plant; HRY = Head rice yield per plant. Parental values are shown by arrows.

Table S1 Phenotypic performance of seven traits in the three RIL populations

Trait	Population	Mean	SD	CV	Range	Skewness	Kurtosis	Parental		Mean
								Female	Male	
BR	TI	80.7	0.96	0.0119	77.8–82.8	-0.44	0.03	82.3	79.8	
	ZM	80.9	0.94	0.0116	78.7–83.4	0.21	-0.27	80.6	81.1	
	XM	80.7	0.94	0.0117	78.3–83.3	0.06	0.02	79.3	79.9
