

Figure S1. Rarefaction curves generated for 16S rRNA gene sequences obtained from samples. Panels represent the rarefaction curves of aggregates of the 16 samples of bulk soil (BS) and samples of the rhizosphere soil of durum wheat (cv. Iride, IR) and Tritordeum (cv. Bulel, cv. HTC-444) under organic (org) and conventional (conv) management.

Table S2: Bacterial phyla with relative variations (var) and significance level (*p*-value) in bulk soil and rhizosphere soil of durum wheat (cv. Iride) and tritordeum (cv. HTC-444 and Bulel) cultivated under organic (org) and conventional (conv) agricultural managements. Data reported are presented as percentages of abundance of the mean values of 2 biological replicates.
