Figure Captions

Figure S1. The temporal change of (a) ammonium (NH_4^+ -N) release, (b) nitrate (NO_3^- -N) release, (c) Total inorganic nitrogen (TIN) (NH_4^+ -N + NO_3^- -N) release, and (d) pH for all treatments from SAO, MAI, and SAI soil during the incubation period.

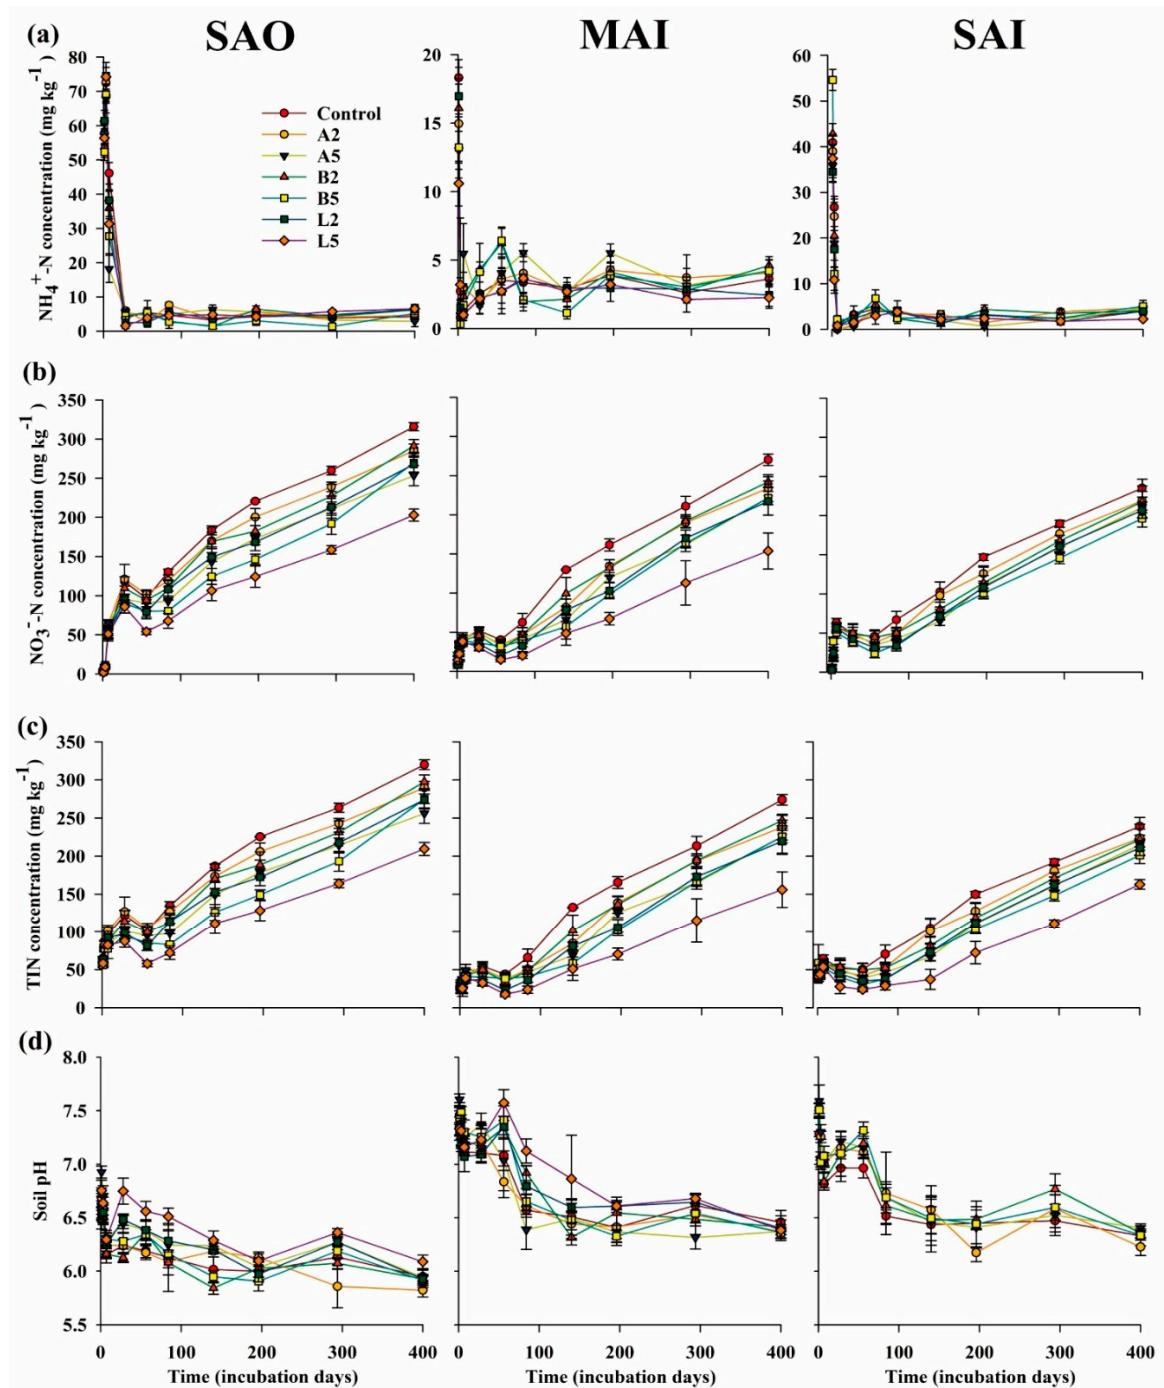

Figure S1. The temporal change of (a) ammonium (NH_4^+ -N) release, (b) nitrate (NO_3^- -N) release, (c) Total inorganic nitrogen (TIN) (NH_4^+ -N + NO_3^- -N) release, and (d) pH for all treatments from SAO, MAI, and SAI soil during the incubation period. A2 (2% ash biochar), A5 (5% ash biochar), B2 (2% bamboo biochar), B5 (5% bamboo biochar), L2 (2% lead tree biochar), L5 (5% lead tree biochar). Values represent means ($n = 5$) \pm standard deviation (error bars).

Table S1. Pearson correlation coefficients between measured parameters at 1 week and 57 weeks for all treatments.

¹ TIN = total inorganic N (nitrate + ammonium); TC = total carbon; TN = total nitrogen; TP = total phosphorus; ² The bold number indicated the significant correlations analyzed by SAS (P < 0.0001).
