

Table S1. Residue properties of winter crops before rice season in 2019

Rotation	Components	Residue DM ¹ (kg m ⁻²)	Residue N (g m ⁻²)	Residue C (g m ⁻²)	C/N ratio	N (%)	C (%)
RP ²	Rice straw	2.09	27.7	708.8		1.3	33.9
	Roots, straw	0.09	1.8	25.2		2.0	28.1
	Total	2.18a ⁵	29.4a	734.0a	27.9		
RW ³	Roots	0.10	0.6	17.2		0.7	17.4
	Straw	0.39	2.4	135.8		0.6	34.6
	Total	0.49b	3.1c	153.0b	50.1		
RC ⁴	Roots	0.04	0.9	10.8		2.1	26.5
	Straw	0.50	15.1	163.1		3.0	32.8
	Total	0.54b	16.0b	173.9b	10.9		

¹DM: dry matter;

²RP: rice-potato with rice straw mulch;

³RW: rice-wheat;

⁴RC: rice-green manure (Chinese milk vetch).

⁵Different lower letters in the same column indicate statistical significance at $P = 0.05$.

The same as below

Table S2. Rice biomass and grain yield in the last four years under rotations

Rotation	Biomass (g m ⁻²)				yield (t ha ⁻¹)			
	2016	2017	2018	2019	2016	2017	2018	2019
RF ¹	1539.5c	1811.9b	1543.5b	1411.3a	8.5b	9.8c	7.7c	7.7a
RP	1772.8a	1895.1a	1884.3a	1636.5a	10.0a	10.7a	8.8a	8.6a
RW	1675.6b	1698.4a	1821.2a	1322.4a	9.6a	9.9ab	8.3b	7.8a
RC	1756.6a	1832.6a	1867.9a	1651.5a	9.3ab	10.2b	8.5ab	8.5a

¹RF: Rice-fallow.

The same as below

Table S3. Percentage share of total soil C and N content in investigated layers in ratio total stock in 0-50 cm (%)

Soil depth (cm)	Rotation	SOC _D ¹	TN _D ²	AN _D ³
0-10	RF	25.9±2.6a	26.0±0.6a	25.4±1.6a
