*,** Asterisks denote that a parental mean is significantly higher than the other mean in that environment at the 0.05 and 0.01 levels of probability, respectively.

† The four environments obtained from different moisture levels in two growing seasons: Fort Collins limited irrigation (08FD), Fort Collins full irrigation (08FW), Greeley limited irrigation (09GD), and Greeley full irrigation (09GW).

‡ Plht, plant height; Ll, leaf length; Lw, leaf width; Sl, spike length; Dth, days to heading; Dpm, days to physiological maturity; Gfd, grain filling duration; Gfr, grain filling rate; Agb, above ground biomass; Hi, harvest index; 200Kwt, 200 kernel weight; Gy, grain yield; Phs, pre-harvest sprouting; Ndvi, normalized difference vegetation index.

Table S2. Pearson correlation coefficients among agronomic characteristics of the CO940610/Platte population (n=185) at Fort Collins under different irrigation levels in the 2007–2008 growing season. Values above the diagonal refer to the fully irrigated treatment and those below the diagonal refer to the limited irrigation treatment.
