## Supplement

# Highly Species-Specific Foliar Metabolomes of Diverse Woody Species and Relationships with the Leaf Economics Spectrum 

Rabea Schweiger, Eva Castells, Luca da Sois, Jordi Martínez-Vilalta and Caroline Müller

Supplementary Table S1: Retention indices (RI) and mass to charge ratios $(\mathrm{m} / \mathrm{z})$ of the identified metabolites. RI were calculated from the GC-FID measurements while the $\mathrm{m} / \mathrm{z}$ values, shown as $\mathrm{m} / \mathrm{z}$ (intensity), were derived from the GC-MS measurements. All the metabolites were also identified via comparison with reference standards.

| Metabolite | RI | Mass to charge ratio (m/z) |
| :---: | :---: | :---: |
| Sugars |  |  |
| fructose | 1828/1838 | $\begin{aligned} & 73 \text { (100), } 307 \text { (81.6), } 217 \text { (80.7), } 103 \text { (78.9), } 147 \text { (39.6), } 308 \text { (22.5), } 277 \\ & (15.6), 133 \text { (14.1), } 205 \text { (10.2), } 364 \text { (10.2) } \end{aligned}$ |
| glucose | 1853/1873 | $\begin{aligned} & 319 \text { (100), } 73 \text { (74.9), } 205 \text { (57.8), } 147 \text { (40.0), } 160 \text { (31.0), } 320 \text { (29.5), } 321 \\ & (14.5), 206 \text { (14.4), } 103 \text { (11.7), } 204 \text { (8.5) } \end{aligned}$ |
| galactose | 1846/1869 | $\begin{aligned} & 319 \text { (100), } 205 \text { (74.6), } 147 \text { (37.8), } 320 \text { (31.7), } 160 \text { (22.4), } 206 \text { (18.3), } 321 \\ & (14.7), 204 \text { ( } 9.9), 75 \text { (9.5), } 229 \text { (8.7) } \end{aligned}$ |
| sucrose | 2607 |  |
| Organic acids |  |  |
| oxalic acid | 1134 | $\begin{aligned} & 147(100), 73(67.5), 148 \text { (15.3), } 190 \text { (8.2), } 149 \text { (7.5), } 74 \text { (6.0), } 66 \text { (5.1), } 72 \\ & (4.8), 219(4.8), 133(4.0) \end{aligned}$ |
| citric acid | 1779 | $\begin{aligned} & 273 \text { (100), } 73 \text { (67.8), } 147 \text { (59.3), } 363 \text { (26.9), } 347 \text { (24.8), } 375 \text { (23.5), } 465 \\ & (15.0), 75 \text { (11.1), } 275 \text { (9.8), } 149 \text { (9.5) } \end{aligned}$ |
| Polyalcohols |  |  |
| myo-inositol | 2051 | $\begin{aligned} & 305 \text { (100), } 217 \text { (82.4), } 73 \text { (64.9), } 318 \text { (57.4), } 147 \text { (51.0), } 191 \text { (39.3), } 319 \\ & (24.3), 265 \text { (19.8), (16.9), } 432(12.8) \end{aligned}$ |

Supplementary Figure S1: NMDS-contour line plots for $C$ per leaf area and N per area.

Primary metabolites

Specialized metabolites

Figure S1. Simplified non-metric multidimensional scaling plots of relative concentrations of metabolic features of the primary (left) and specialized (right) metabolism detected in leaves of 20 plant species (deciduous: circles; evergreen: squares). The deciduous species are highlighted by gray areas that are framed by convex hulls (closed curves surrounding all data points with minimum perimeter) for this group. Contour lines (green: low values; red: high) representing surface fits of generalized additive models for: ( $\mathbf{a}, \mathbf{b}$ ) carbon (C) per leaf area (Carea); (c, d) nitrogen (N) per area ( $\mathrm{N}_{\text {area) }}$ ).
