

Table S1 : Implication of miR-21-5p in human renal pathology.

Kidney disease	Renal expression of miR-21-5p	Circulating miR-21-5p	Urinary level of miR-21-5p	Other expression of miR-21-5p	References
Acute kidney injury (AKI)			Elevated urinary level of miR-21-5p in AKI patients. No association with AKI no recovery at 90 days.		[1]
		Increased miR-21-5p level after cardiopulmonary bypass surgery with ischemic preconditioning.			[2]
		Increased miR-21-5p level in AKI patients. miR-21-5p associated with AKI clinical stage.	Higher level of miR-21-5p in AKI patients.		[3]
		Lower serum and urinary levels of miR-21-5p in patients with cardiac surgery-associated AKI.			[4]
		Elevated levels of miR-21-5p in acute tubular necrosis and Hepatorenal Syndrom.			[5]
		Decreased circulating miR-21-5p associated with post cardiac surgery AKI			[6]
	Increased renal expression of miR-21-5p in transplanted patients with acute tubular necrosis		Increased urinary level of miR-21-5p after: - acetaminophen-induced AKI - cisplatin-induced AKI		[7]
		Increased urinary and circulating miR-21-5p levels in patients with post cardiac surgery AKI			[8]

			Increased urinary level of miR-21-5p in patients with AKI		[9]
			Increased urinary level of miR-21-5p in patients with AKI		[10]
Nephrolithiasis	Increased miR-21-5p expression		Increased miR-21-5p urinary level		[11]
papillary renal cell carcinoma		Increased miR-21-5p levels			[12]
Nephroangiosclerosis			Increased urinary level of miR-21-5p associated with a better renal outcome		[13]
Diabetic nephropathy			Increased urinary exosomal expression of miR-21-5p associated with: - higher serum creatinine level - lower eGFR		[14]
	Increased miR-21-5p glomerular expression negatively associated with eGFR				[15]
		Increased circulating miR-21-5p level associated with - a low eGFR - a high proteinuria - IRC progression			[16]
		Increased circulating miR-21-5p level associated with renal function worsening			[17]

		Increased circulating miR-21-5p level is not associated with nephropathy			[18]
	Increased renal miR-21-5p level associated with - kidney function worsening - proteinuria - fibrosis (glomerular and interstitial)				[19]
	Increased glomerular miR-21-5p expression associated with proteinuria				[20]
	Increased renal miR-21-5p level				[21]
			Increased urinary levels of miR-21-5p		[22]
			Increased urinary levels of miR-21-5p associated with : - a better renal function - less fibrotic lesions		[23]
			Increased urinary levels of miR-21-5p associated with a better renal outcome		[13]
Kidney transplantation			Increased urinary levels of miR-21-5p in patients with moderate and severe IFTA		[24]
			Increased urinary levels of miR-21-5p in patients with interstitial fibrosis and tubular atrophy		[25]

				Increased levels of miR-21-5p in hypothermic machine perfusate associated with a worse renal function	[26]
	Increased renal miR-21-3p level in patients developing post-transplant AKI				[27]
	Increased miR-21-5p level in patients with high IF/TA grade	Increased circulating miR-21-5p level in patients with grade 3 IF/TA			[28]
	Increased renal miR-21-5p level associated with graft function, graft survival and renal fibrosis				[29]
IgA nephropathy	Increased miR-21-5p expression				[30]
	Increased miR-21-5p level associated with - glomerular and interstitial fibrosis - renal survival				[31]
	Increased glomerular and tubular miR-21-5p associated with : - glomerular and interstitial fibrosis - proteinuria - renal function				[32]
			Increased urinary levels of miR-21-5p associated with a better renal function		[33]

			Increased urinary levels of miR-21-5p associated with a better renal outcome		[13]
Minimal change nephrotic syndrome			Increased urinary levels of miR-21-5p		[22]
Polycystic Kidney Diseases	miR-21-5p is increased in cyst walls				[34]
Uremic Vascular Calcification		Increased levels of miR-21-5p			[35]
Chronic Kidney Disease			Increased urinary levels of miR-21-5p		[36-37]

AKI : Acute Kidney Injury ; DFG : Débit de filtration glomérulaire ; IF/TA : Interstitial Fibrosis / Tubular Atroph ; eGFR : estimated Glomerular Filtration Rate ; ESRD: End Stage Renal Disease ; CKD: Chronic Kidney Disease ; VC: Vascular Calcification ; IFTA: Interstitial Fibrosis and Tubular Atrophy

Table S2 : Implication of miR-21a-5p in animal models of acute and chronic renal pathologies.

Kidney disease	miR-21a-5p role	Animal model	Expression of miR-21a-5p	Molecular target : (cell type : miR-21a-5p direct target)	Référence
Acute Kidney Injury (AKI)	Protective	Cecal ligation and puncture (CLP) in rats	miR-21a-5p \uparrow in kidney	<i>Endothelial progenitor cells (rat)</i> : RUNX1	[38]
		Overexpression of miR-21a-5p (agomir)	<u>Overexpression of miR-21a-5p :</u> \uparrow renal function \downarrow histological injuries \downarrow apoptosis, inflammatory and oxidative stress response		
		Ischemia-reperfusion mouse model	miR-21a-5p \downarrow in dendritic cells	<i>Bone Marrow Derived Dendritic Cell (human)</i> : CCR7	[39]
		Inhibition of miR-21a-5p (KO in dendritic cells)	<u>Inhibition of miR-21a-5p :</u> \downarrow renal function \uparrow histological injuries		
		Ischemia-reperfusion mouse model Cobalt chloride (protective)	miR-21a-5p \uparrow kidney <u>Inhibition of miR-21a-5p :</u> \downarrow renal function \uparrow histological injuries	<i>Umbilical vein endothelial cells (human)</i> : thrombospondin-1	[40]
		Ischemia-reperfusion mouse model Delayed ischemic preconditioning (protective)	miR-21a-5p \uparrow whole kidney after preconditioning <u>Inhibition of miR-21a-5p :</u> Loss of preconditioning benefit (renal function, histology)	<i>HK2 (Human renal epithelial cells)</i> : PHD2 – HIF1	[41]
		Inhibition of miR-21a-5p (LNA)			
		Ischemia-reperfusion rat model Ghrelin (protective)	miR-21a-5p \uparrow miR-21a-5p $\uparrow\uparrow$ with ghreline	<i>NRK-52E cells (Rat renal epithelial cells)</i> : PTEN –Akt Bcl2	[42]
		Ischemia-reperfusion mouse model Ischemic preconditioning (protective)	miR-21a-5p \uparrow 24h after preconditioning	<i>HEK-296 (human embryonic kidney) and HK-2 :</i>	[43]

				MKK3 – p38 MAPK – IL-6/TNF- α	
		Ischemia-reperfusion rat model	miR-21a-5p \uparrow whole kidney	<i>Cellules NRK-52E</i> :	[44]
		Inhibition of miR-21a-5p (oligonucleotides)	<u>Inhibition of miR-21a-5p</u> : \uparrow renal function \uparrow histological injuries	Rab11a	
		Ischemia-reperfusion mouse model, Preconditioning with xenon (protective)	miR-21a-5p \uparrow kidney miR-21a-5p $\uparrow\uparrow$ with xenon		[45]
		Inhibition of miR-21a-5p (LNA)	<u>Inhibition of miR-21a-5p</u> : Loss of xenon benefit (renal function, histology)		
AKI	protective	Injections of gentamycine in rats Preconditioning with xenon (protective)	miR-21a-5p \uparrow kidney miR-21a-5p $\uparrow\uparrow$ with xenon		[46]
		Ischemia-reperfusion mouse model Ischemic preconditioning (protective)	miR-21a-5p \uparrow whole kidney after preconditioning (4h-4 days)	<i>Epithelial renal cells (human)</i> :	[47]
		Inhibition of miR-21a-5p (LNA)	<u>Inhibition of miR-21a-5p</u> : Loss of preconditioning benefit (renal function, histology) No effect in absence of preconditioning	PDCD4 HIF1	
		Ischemia-reperfusion mouse model	miR-21a-5p \uparrow kidney (D1 to D30)	<i>Tubular cells (mouse)</i> :	[48]
	deleterious	Aristolochic acid treated mice	miR-21a-5p \uparrow kidney	<i>HK2</i> :	[49]
		Inhibition of miR-21a-5p (KO or LNA)	<u>Inhibition of miR-21a-5p</u> : Protection against fibrosis injuries \uparrow renal function	Wnt2b	
		Ischemia-reperfusion rat model	miR-21a-5p \uparrow kidney		[50]

		Vitamin D3 and erythropoietin preconditioning			
		Ischemia-reperfusion mouse model Administration of erythropoietin (protective)	miR-21a-5p \uparrow kidney Erythropoietin \downarrow miR-21a-5p kidney		[51]
		Cisplatin injections in rat	Urinary miR-21a-5p \uparrow		[52]
		Ischemia-reperfusion mouse model	miR-21a-5p \uparrow kidney miR-21a-5p $\uparrow\uparrow$ 24h post reperfusion		[53]
		Ischemia-reperfusion rat model Gentamycine-induced AKI in rats	miR-21a-5p \uparrow cortex $\uparrow\uparrow$ medulla \downarrow miR-21a-5p in blood \uparrow miR-21-5p in urine miR-21a-5p \uparrow cortex and medulla \downarrow miR-21a-5p in blood and urine		[10]
		Ischemia-reperfusion mouse model Inhibition of miR-21a-5p (KO or oligonucleotide)	\uparrow miR-21a-5p kidney <u>Inhibition of miR-21a-5p :</u> Protection against fibrosis injuries	<i>Myofibroblasts, renal epithelial cells :</i> ERK/MAPK PPARα MPV17-like RECK	[54]
		HMOX1 ^{-/-} mice with low salt diet and injection of Cyclosporin A	miR-21a-5p \uparrow whole kidney		[55]
		Low salt diet in mice and injection of Cyclosporin A	miR-21a-5p \uparrow whole kidney Up to 2 weeks of treatment then decrease	<i>Proximal tubular cells (human) :</i> PTEN – Akt	[56]

Renal transplantation	deleterious	Streptozotocin (STZ)-induced diabetic mice Inhibition of miR-21a-5p (KO)	miR-21a-5p \uparrow kidney <u>KO miR-21a-5p :</u> \uparrow proteinuria \downarrow renal function \uparrow glomerulosclerosis	<i>Podocytes (mice) :</i> SMAD7 PDCD4 p53 TIMP3	[20]
		db/db mice Overexpression of miR-21a-5p (plasmide)	miR-21a-5p \downarrow whole kidney <u>Overexpression of miR-21a-5p :</u> \downarrow mesangial proliferation \downarrow albuminuria	<i>Mesangial cells (mouse) :</i> PTEN - PI3K - Akt	[57]
Diabetic nephropathy (DN)	protective	STZ-induced DN rats Inhibition of miR-21a-5p (oligonucleotides)	miR-21a-5p \uparrow kidney <u>Inhibition of miR-21a-5p :</u> \downarrow inflammatory response and progression of the disease \downarrow renal function	<i>Podocytes (mouse) :</i> TIMP3	[58]
		KK-Ay mice + high fat diet (diabetes + moderate obesity)	miR-21a-5p \uparrow kidney and serum		[59]
	deleterious	STZ-induced diabetic mice Treatment with C66 (curcumin analogue) Inhibition of miR-21a-5p (LNA)	C66 \downarrow miR-21a-5p kidney <u>Inhibition of miR-21a-5p :</u> - \downarrow albuminuria - \downarrow renal fibrosis		[60]

		KK-Ay mice + high fat diet (diabetes + moderate obesity)	miR-21a-5p correlated expression in kidney and sera circulating miR-21a- \uparrow associated with : - albuminuria - altered renal function - glomerular injuries <u>Inhibition of miR-21a-5p</u> : improvement of albuminuria, renal function and glomerular injuries	<i>HKC (Human Kidney Cells)</i> : SMAD 7	[61]
		KK-Ay mice + high fat diet Inhibition of miR-21a-5p (lentivirus)	miR-21a-5p \uparrow whole kidney <u>Inhibition of miR-21a-5p</u> : - \downarrow EMT and fibrosis markers - \downarrow albuminuria	<i>HKC (Human Kidney Cells)</i> + TGF- β : TGF- β – SMAD 3 / SMAD 7 α -SMA, E-cadherin	[61]
		KK-Ay mice Inhibition of miR-21a-5p (oligonucleotide)	miR-21a-5p \uparrow whole kidney associated with \uparrow albuminuria, renal failure and glomerular sclerosis <u>Inhibition of miR-21a-5p</u> : \downarrow injuries		[62]
		Streptozotocin-induced diabetic mice TIMP3 ^{-/-} mice	miR-21a-5p \uparrow whole kidney	<i>Mesangial cells (mice)</i> : TIMP3 SirT1	[21]
	Deleterious	db/db mice Inhibition of miR-21a-5p (ultrasound-microbubble-mediated miR-21 small hairpin RNA transfer)	miR-21a-5p \uparrow whole kidney <u>inhibition of miR-21a-5p</u> : - improvement of renal function - inhibition of renal fibrosis and inflammation	<i>Tubular and mesangial cells (rat)</i> : SMAD 7 TGF- β NF κ B	[63]

		OVE26 mice (Type 1 diabetes)	miR-21a-5p \uparrow renal cortex	<i>Mesangial cells (rat and human):</i> PTEN – AKT – GSK3 β - Tor complex 1	[64]
		NOD mice (Non Obese Diabetic mice) PDCD4 ^{-/-} (type 1 diabetes)	miR-21a-5p \uparrow β islands	<i>β cells (mice) :</i> PDCD4 – NF κ B	[65]
		Col4a3 ^{-/-} mice Inhibition of miR-21a-5p (oligonucleotide)	miR-21a-5p \uparrow kidney <u>Inhibition of miR-21a-5p :</u> Protection against disease progression and improvement of survival \downarrow albuminuria \downarrow expression markers of kidney injury, fibrosis, inflammation, mitochondrial function and lipid metabolism		[32]
Alport nephropathy	deleterious	Col4a3 ^{-/-} mice Inhibition of miR-21a-5p (oligonucleotide)	miR-21a-5p \uparrow whole kidney <u>Inhibition of miR-21a-5p :</u> Improvement of renal function and proteinuria Survival increased \downarrow glomerular and interstitial fibrosis	<i>Proximal tubular cells, podocytes, fibroblasts (mice and human) :</i> PPAR-α – RXR (Retinoid X Receptor)	[66]
Glomerulonephritis	deleterious	Nephrotoxic serum injections in rat (contains antibodies against the glomerular basement membrane)	Urinary miR-21a-5p \uparrow		[67]
		Glomerulonephritis induced by anti-Thy 1.1 in rats	miR-21a-5p \uparrow kidney		[68]

				<i>Circulating T cells (human lupus disease) :</i> PDCD4	[69]
Polycystic renal disease	deleterious	Kif3a ^{-/-} mice Pkd1 ^{-/-} mice Pkd2 ^{-/-} mice Hnf-1β ^{-/-} mice miR-21 ^{-/-} mice	miR-21a-5p ↗ whole kidney and cysts <u>KO miR-21a-5p :</u> ↘ cysts Improvement of renal function	<i>Renal epithelial cells (mice) :</i> PDCD4	[70]
Kidney Stone Disease	deleterious	Calcium oxalate crystal deposition induced by injection of glyoxylate in mice Inhibition of miR-21a-5p (oligonucleotides)	miR-21a-5p ↗ kidney <u>Inhibition of miR-21a-5p :</u> ↘ creatinemia ↘ renal tubular injury ↘ lipid accumulation	<i>HK2 :</i> PPARα	[34]
Renal fibrosis / Chronic kidney disease	deleterious	TGF-β transgenic mice (model of glomerular sclerosis) Inhibition of miR-21a-5p (KO)	miR-21a-5p ↗ kidney <u>KO miR-21a-5p :</u> ↗ proteinuria ↗ glomerulosclerosis	<i>Podocytes (mice) :</i> SMAD7 PDCD4 p53 TIMP3	[11]
		UUO mice	miR-21a-5p ↗ kidney	<i>Epithelial renal cells (mice) :</i> SPRY1/ERK/NFκB signalling pathway	[20]
		Angiotensin II-treated mice Inhibition of miR-21a-5p (lentivirus)	↗ miR-21a-5p cortical kidney <u>Inhibition of miR-21a-5p :</u> ↘ albuminuria Protection against fibrosis	<i>HK2 :</i> PPARα	[71]

	deleterious	UUO mice	⬆ miR-21a-5p kidney	HK2 : ERK1/2	[72]
		Adenine-induced renal fibrosis mouse model	⬆ miR-21a-5p cortical kidney		[73]
		Unilateral ureteral obstruction mice (UUO)	⬆ miR-21a-5p kidney D4-D28	Fibroblasts (mice) : α -SMA, collagen 1A1	[19]
		UUO mice	⬆ miR-21a-5p kidney	Myofibroblasts, renal epithelial cells (mice) : ERK/MAPK	[28]
		Inhibition of miR-21a-5p (KO or oligonucleotide)	<u>Inhibition of miR-21a-5p</u> : Protection against fibrosis	PPARα MPV17 RECK	
		UUO mice SMAD3 ^{-/-} (protective)	⬆ miR-21a-5p kidney ⬇ miR-21a-5p kidney SMAD3 ^{-/-} with UUO		[54]
		Inhibition of miR-21a-5p (shRNA)	<u>Inhibition of miR-21a-5p</u> : Improvement of histological injuries		
		UUO mice	⬆ miR-21a-5p- kidney		[75]
		Inhibition of miR-21a-5p (LNA)	<u>Inhibition of miR-21a-5p</u> : Improvement of histological injuries		
		UUO rats SHRSP rats (hypertensive rats)	miR-21a-5p ⬆ kidney		[76]

Abbreviations : AKI : Acute Kidney Injury ; CLP : cecal ligation and puncture ; DN : diabetic nephropathy ; HKC : Human Kidney Cells ; KO : Knock Out ; LNA : Locked Nucleic Acid ; UUO : Ureteral Unilateral Obstruction; shRNA : small hairpin RNA, SHRSP : Spontaneously hypertensive rat stroke-prone ; STZ : Streptozotocin
