**Supplementary Figure S1:** Body weights of juvenile WT and *Fmr1<sup>KO</sup>* female and male mice in response to rodent diets. Mice were weighed on postnatal day 21 (P21) immediately prior to seizure testing: female WT/D07030301 (n=45), female WT/Purina 5015 (n=26), female *Fmr1<sup>KO</sup>*/D07030301 (n=10), female *Fmr1<sup>KO</sup>*/Purina 5015 (n=24), male WT/D07030301 (n=80), male WT/Purina 5015 (n=29), male *Fmr1<sup>KO</sup>*/D07030301 (n=17), and male *Fmr1<sup>KO</sup>*/Purina 5015 (n=32). Statistics were determined by 2-way ANOVA: females interaction  $F(1,101)=2.296$ ,  $p=0.13$ ; genotype  $F(1,101)=8.500$ ,  $p=0.0044$ ; diet  $F(1,101)=8.989$ ,  $p<0.0034$ ; males interaction  $F(1,154)=3.590$ ,  $p=0.06$ ; genotype  $F(1,154)=3.323$ ,  $p=0.070$ ; diet  $F(1,154)=18.49$ ,  $p<0.0001$ ; and Tukey's multiple comparison tests denoted by  $p<0.05$  (\*) and  $p<0.01$  (\*\*).

**Supplementary Figure S2:** Body weights of adult WT female and male mice in response to rodent diets. C57BL/6J mice were maintained on Purina 5015 for 1 month and then transferred to D07030301 or left on the Purina 5015 for an additional 1 month. Mice were weighed at 2 months of age immediately prior to PTZ-induced seizure testing: female D07030301 (n=26), female Purina 5015 (n=20), male D07030301 (n=39) and male Purina 5015 (n=20). Statistics were determined by Student's t-tests: females ( $p=0.074$ ) and males ( $p=0.067$ ).

**Supplementary Figure S3:** EchoMRI measurements of total body weight, fat mass, lean mass, total water, and free water in female *Fmr1<sup>HET</sup>* and *Fmr1<sup>KO</sup>* and male WT and *Fmr1<sup>KO</sup>* mice as a function of Teklad 2019, CIF and SIF diets at age P62.
