

Figure S2. Absence of Cre recombinase activity in uninduced *Rbpms*^{CreERT2/+}; *Rosa26*^{tdT/+} mice. Representative images of the ganglion cell layer (GCL) of retinal flat-mounts (top panels) and cryosections (bottom panels) immunolabeled with antibodies against RFP (red) and RBPMS (green) and nuclear counterstained with DAPI (blue). Without tamoxifen, no RFP signal was detected in retinal cells above the background. ONL and INL indicate outer nuclear layer and inner nuclear layer, respectively. Scale bars equal 50 μ m.
