Supplemental Table S1. Chemical Properties Used in PCA Analysis (Figure 6). Calculation of HBA, HBD, TPSA, LogS, and cLogP was performed using DataWarrior (Sander, T). Calculation of LogP and water solubility were performed using SwissADME (2). cLogD was calculated using Chemaxon Software (Chemaxon, San Diego, CA). The CNS MPO Score (denoted as Score) was calculated using the algorithm in (3). Violations of Lipinski's Rules (4) were calculated using existing data from the table.
