Figure S1. Metabolomics Pathway Analysis (MetPA) of rachis tissue from the resistant *Fhb7E* carrier (HOM+) and susceptible non-carrier (HOM-) lines at 4 dpi after water (*mock*) or *Fg* treatment: (a) *Fg*-HOM+ vs. *mock*-HOM+, and (b) *Fg*-HOM- vs. *mock*-HOM- comparisons. All the matched pathways are displayed as circles. The colour of each circle is based on *p*-values (darker colours indicate more significant changes of metabolites in the corresponding pathway), whereas the size of the circle corresponds to the pathway impact score. The most impacted pathways having high statistical significance scores are annotated by their full name or numbers (see legend).

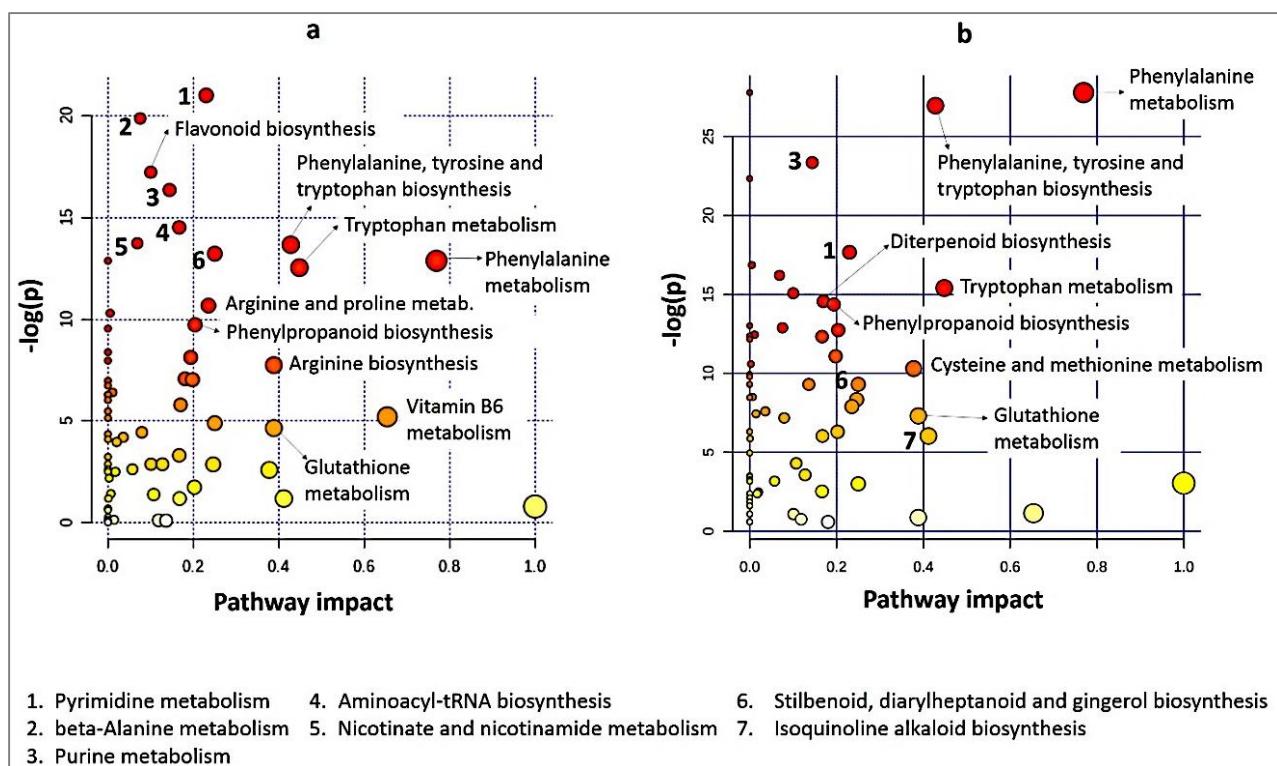

Figure S2. A) EICs of DON-GSH catalyzed by the *Fhb7E-GST* gene in *Fg*-inoculated *Fhb7E+* (green) and *Fhb7E-* rachis samples (yellow). B) Base peak chromatogram of DON-GSH precursor ion (m/z 604.2173, retention time 7.03 min) of *Fg*-inoculated *Fhb7E+* samples. C) Tandem mass spectra generated by fragmentation of the DON-GSH precursor ion. The m/z values for possible fragments and the corresponding formula are indicated.
