

Supplementary Figure S1 Effect of PBK-asd DNA vaccine on testosterone of Yiling goats.

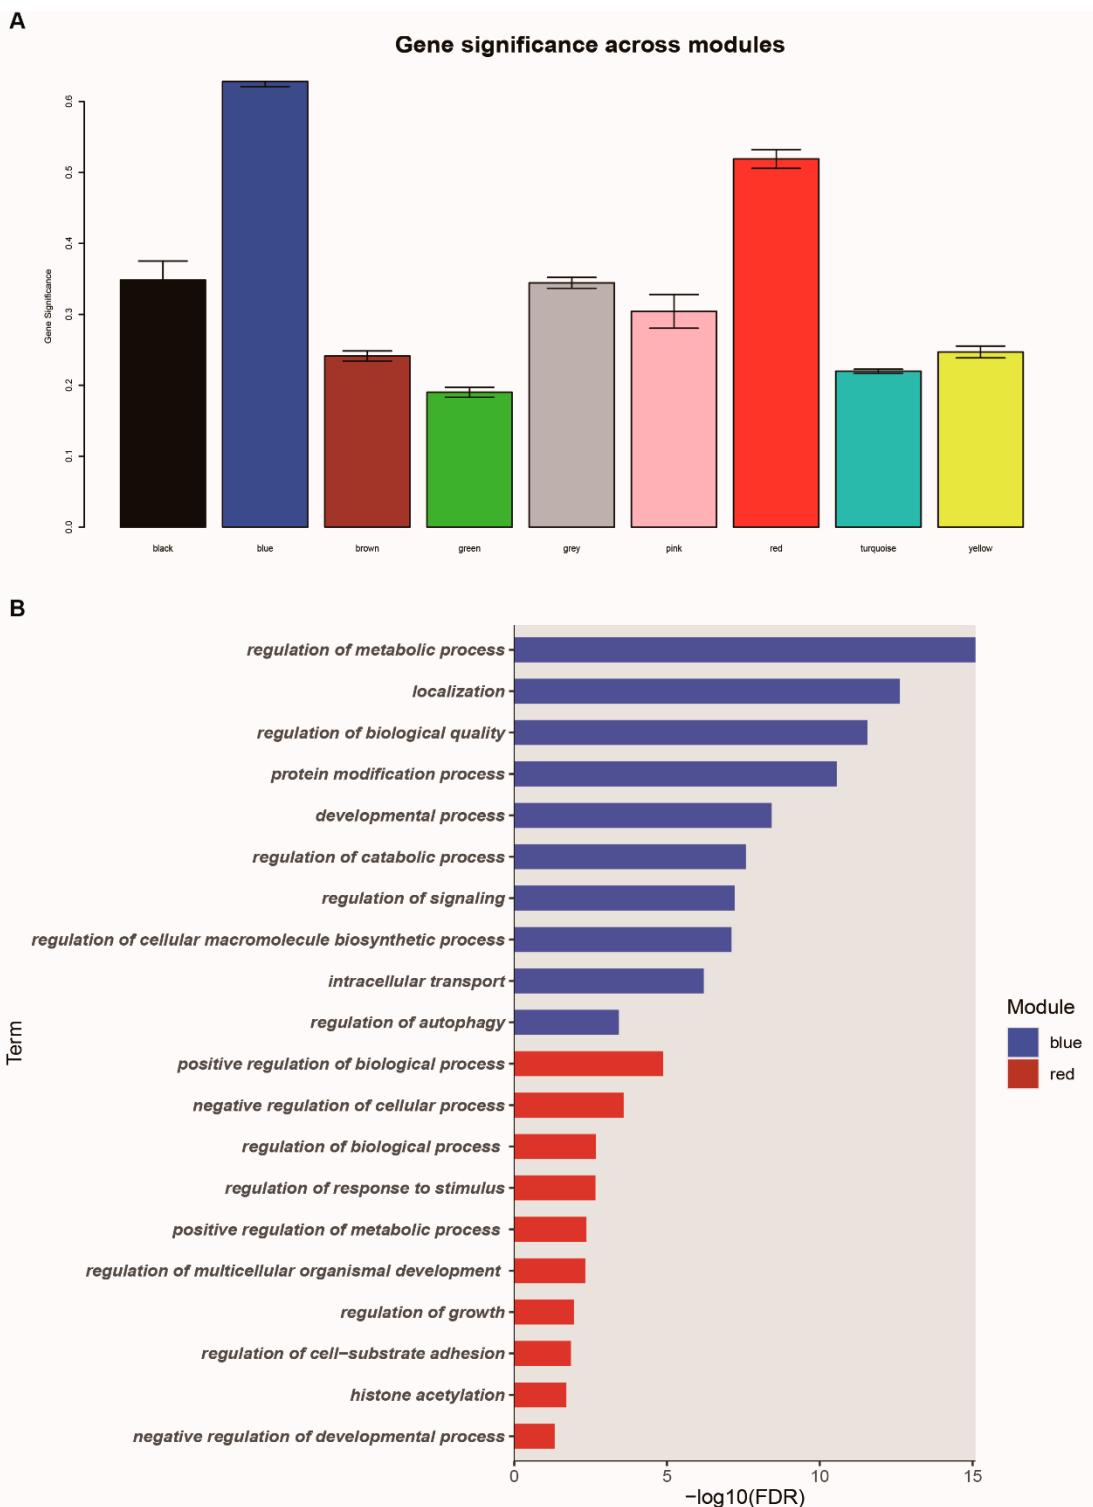

The mean \pm SEM serum testosterone hormone concentration in kid goats immunized with PBK-asd ($n=5$), surgically castrated ($n=5$), and control group ($n=5$), respectively. Different superscript letter among weeks within a treatment group indicates significant difference at $p < 0.05$.

Supplementary Figure S2. Functional enrichment of DEG in buck groups. **A** The 10 items of GO enrichment in biological process. **B** The 10 items of KEGG pathway enrichment.

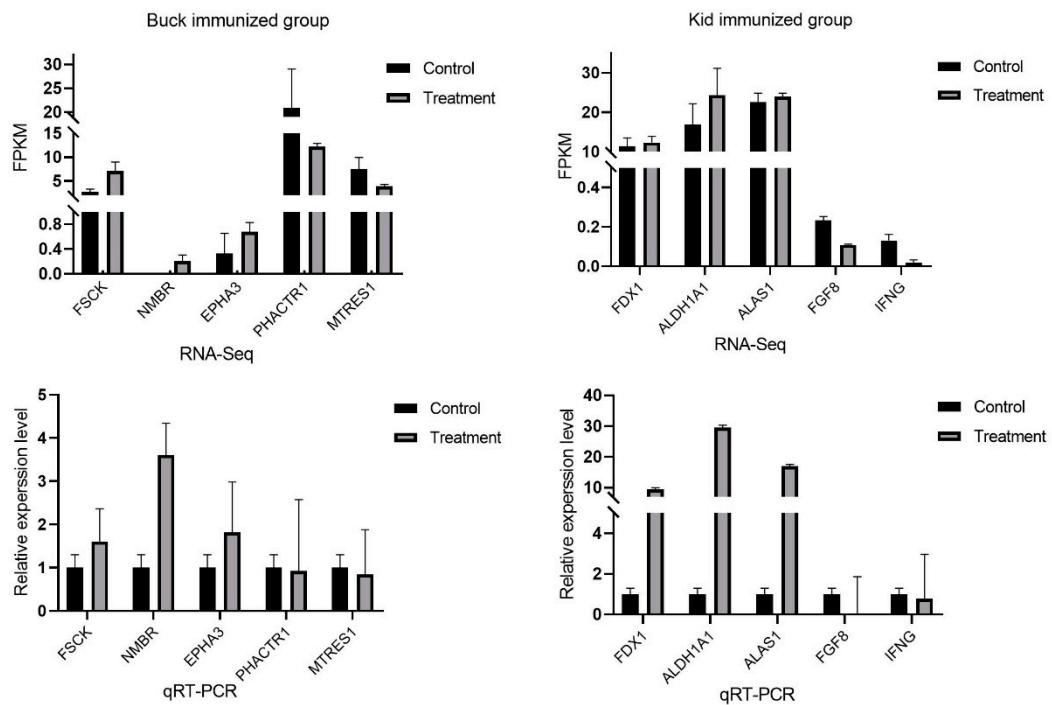

Supplementary Figure S3 The ME values in control group were correlated with phenotype traits. Each row in the table corresponds to a consensus module, and each column to a trait. Within each table cell, upper values represent correlation coefficients between ME and the variable, while lower values in brackets correspond to Student's asymptotic *p*-value.

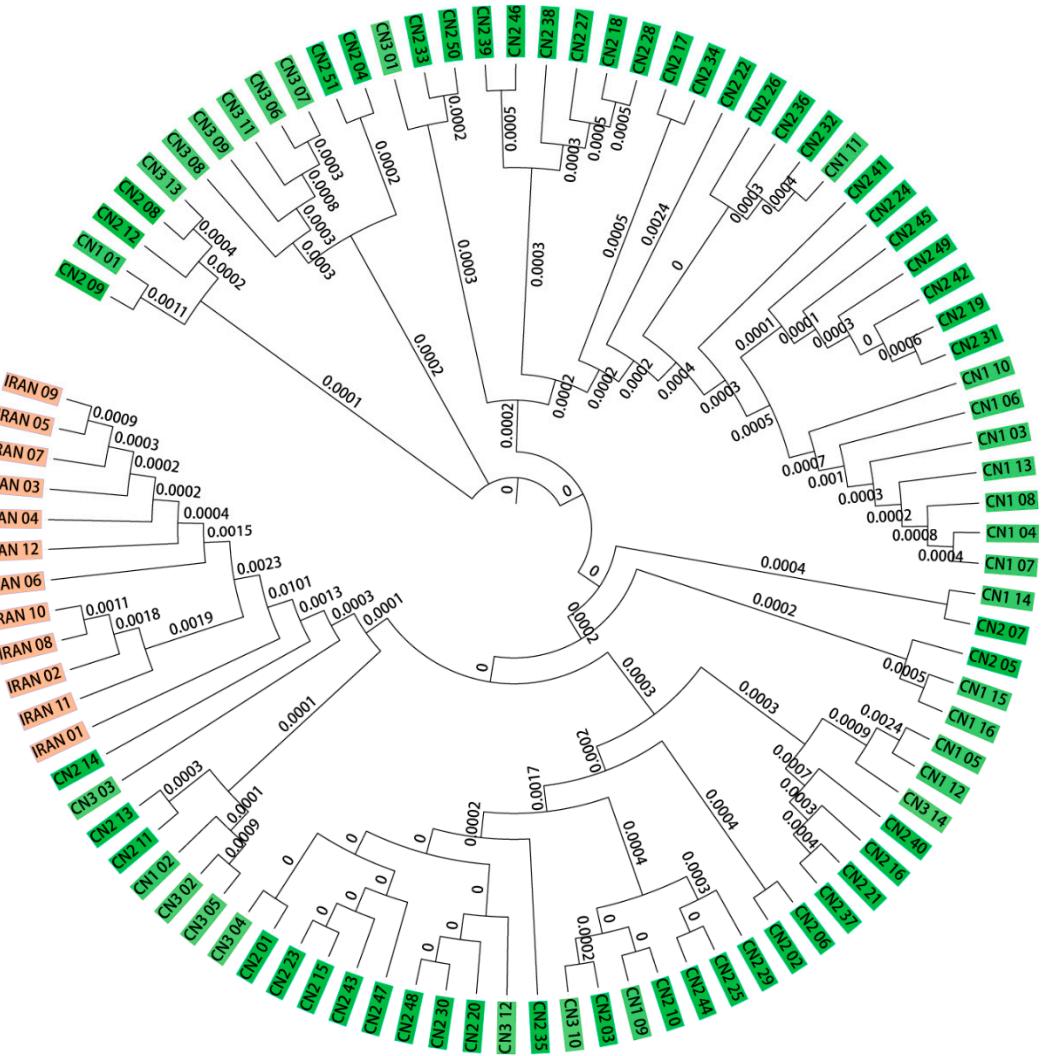

Supplementary Figure S4 Gene significance (GS) across module and functional enrichment. **A** GS of testis weight in each module. **B** Summary of Gene Ontology (GO)

analysis present under biological process of red and blue modules.

Supplementary Figure S5. Validation of transcriptome analysis results using qPCR analysis. The goat β -actin gene was used as reference gene. Data are shown as mean \pm SD (n=3).

Supplementary Figure S6 The Neighbor-Joining phylogenetic tree of domestic and wild goats based on complete mitochondrial DNA sequences. Note: The green labels represent domestic goats and the orange labels represent wild goats. The values refer to genetic distance.

Supplement Table S1. Primers used for quantitative reverse transcriptase PCR for goat.
