† Co-authorship

19 **Supplementary Figures**

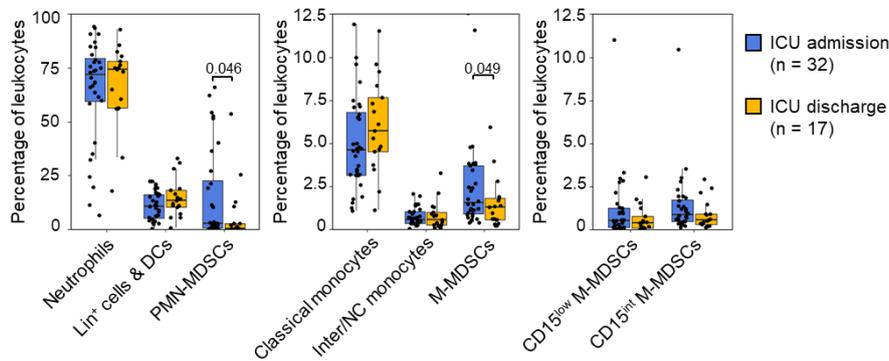

**Figure S1.** Gating strategy of flow cytometry data to exclude debris, doublets and CD45- non-hematopoietic cells (A), univariate histogram plots of cell surface marker expression by whole blood cells from the endotoxemia study (B) and ICU study (C) study, and back-gating of samples from ICU study (D).

20  
21

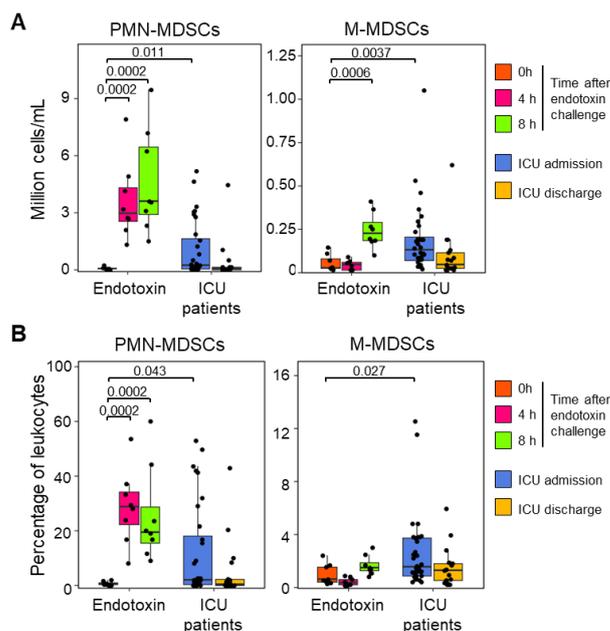

**Figure S2. Leukocyte counts in the blood of healthy subjects infused with endotoxin.** Eight healthy subjects were infused with 2 ng/kg endotoxin. Blood was collected just before (0) and 1, 2, 3, 4, 6, 8, 24 and 168 hours after endotoxin infusion. CD45<sup>+</sup> cells were quantified by flow cytometry as described in *Materials and Methods*, and data expressed as millions of leukocytes/mL of blood. **Left)** The graph shows medians with standard deviations. **Right)** Data are medians and interquartile ranges (IQR).

22  
23

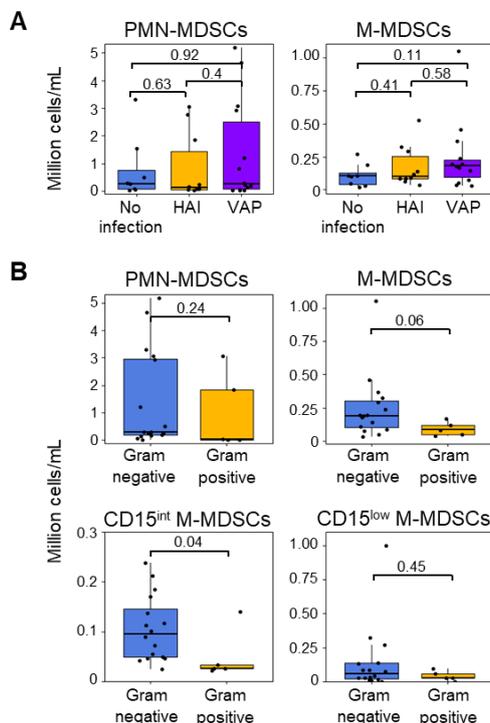

**Figure S3. MDSC-like cells in non-infectious mechanically ventilated ICU patients.** Blood was collected at ICU admission (n = 32) and at ICU discharge (n = 17) from mechanically ventilated ICU patients without infection and analyzed by flow cytometry and unsupervised clustering as described in **Figure 1**. Data are expressed as the percentage in leukocytes of neutrophils, lineage positive (lin<sup>+</sup>) cells and dendritic cells (DCs), polymorphonuclear MDSCs (PMN-MDSCs), classical monocytes, intermediate/non-classical (inter/NC) monocytes, monocytic MDSCs (M-MDSCs), and CD15<sup>low</sup> and CD15<sup>intermediate</sup> (CD15<sup>int</sup>) M-MDSCs. Boxplots show medians and upper and lower quartiles. The whiskers show 5 to 95 percentiles. Each dot represents an individual sample. \* P < 0.05.

24  
25

**Figure S4. Comparison of MDSC-like cells levels between healthy subjects challenged with endotoxin and ICU patients.** Absolute counts (A) and percentages (B) of PMN-MDSCs and M-MDSCs in healthy subjects (n = 8) infused for 0, 4 and 8 hours with endotoxin, and in ICU patients at study inclusion (n = 32) and at ICU discharge (n = 17). Boxplots show medians and upper and lower quartiles. The whiskers show 5 to 95 percentiles. \*, P < 0.05; \*\*, P ≤ 0.01; \*\*\*, P ≤ 0.001 (healthy patients before endotoxin challenge versus other groups of subjects).

26  
27

**Figure S5. Absolute counts of MDSC-like cells in relation with the development of infection in mechanically ventilated ICU patients.** A) PMN-MDSCs and M-MDSCs in patients who did not develop an infection (No HAI, n = 8), and in patients who developed hospital-acquired infection (HAI, other than ventilator-associated pneumonia-VAP, n = 10) and VAP (n = 14). B) PMN-MDSCs, M-MDSCs, CD15<sup>int</sup> M-MDSCs and CD15<sup>low</sup> M-MDSCs at ICU admission in patients who subsequently developed Gram-negative or Gram-positive bacterial infections. Boxplots show medians and upper and lower quartiles. The whiskers show 5 to 95 percentiles. Each dot represents an individual sample.

28

Table S1

Healthy volunteers challenged with with 2 ng/kg of LPS  
Cell counts in blood

	Hours post endotoxin challenge	Leukocytes	Neutrophils	Neutrophils	PMN-MDSCs	PMN-MDSCs	Classical monocytes	Classical monocytes	Intermediate & non-classical monocytes	Intermediate & non-classical monocytes	M-MDSCs	M-MDSCs
