Supplementary Figure 1. Predicted probability of the confirmed sustained progression (CSP) (CD3+/CD69+ at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

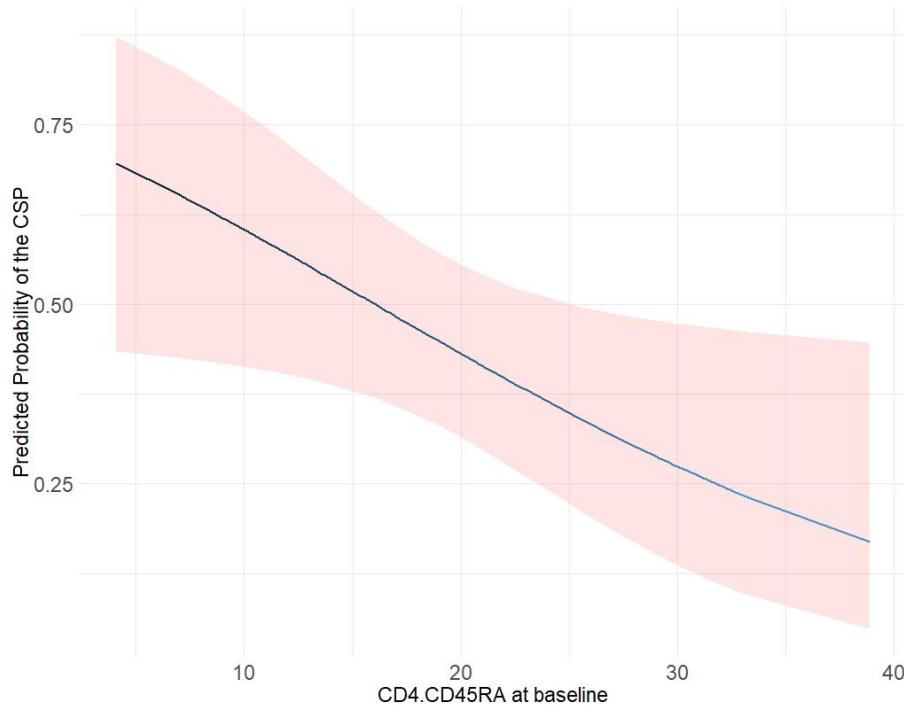

Supplementary Figure 2. Predicted probability of the CSP (CD3+/CD69+ab at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

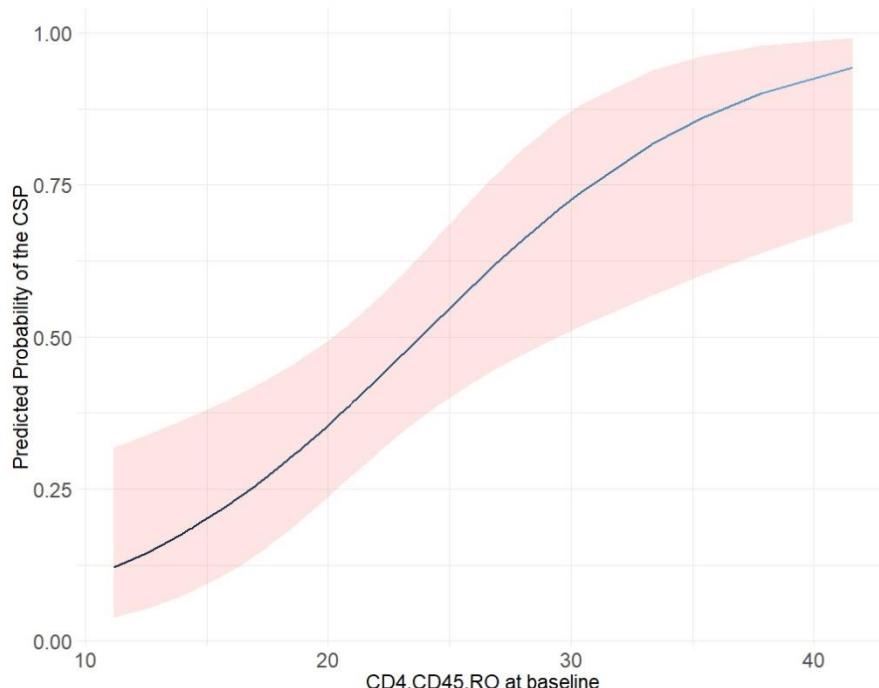

Supplementary Figure 3. Predicted probability of the CSP (CD4+/CD45RA+ at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue

curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

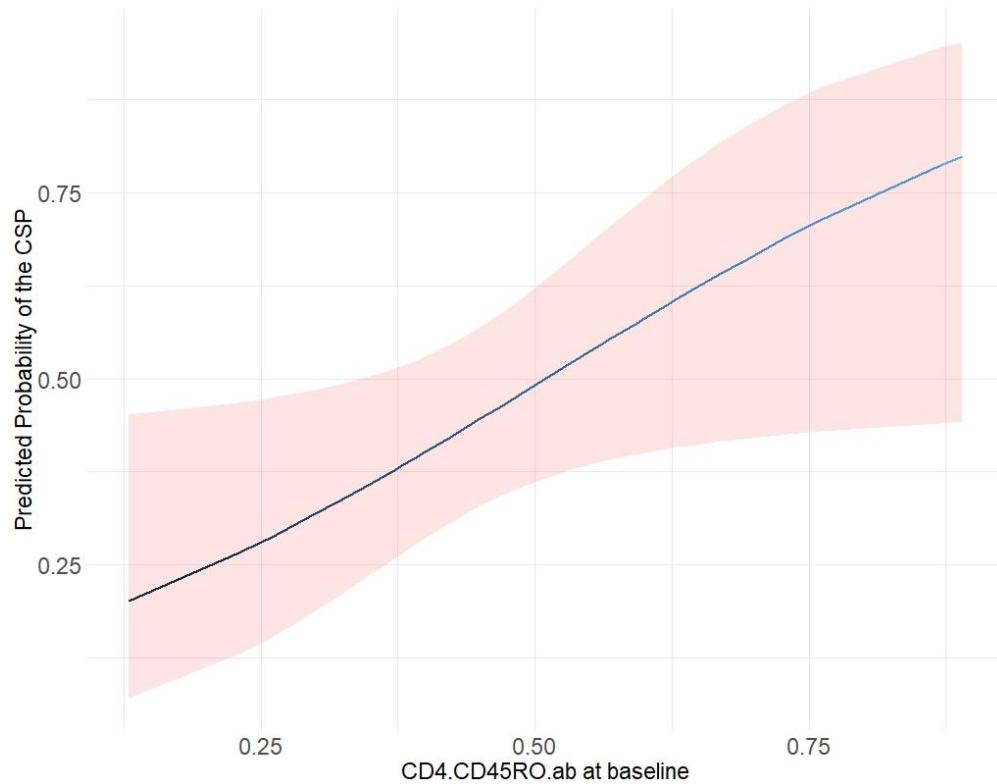

Supplementary Figure 4. Predicted probability of the CSP (CD4+/CD45RO+ at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

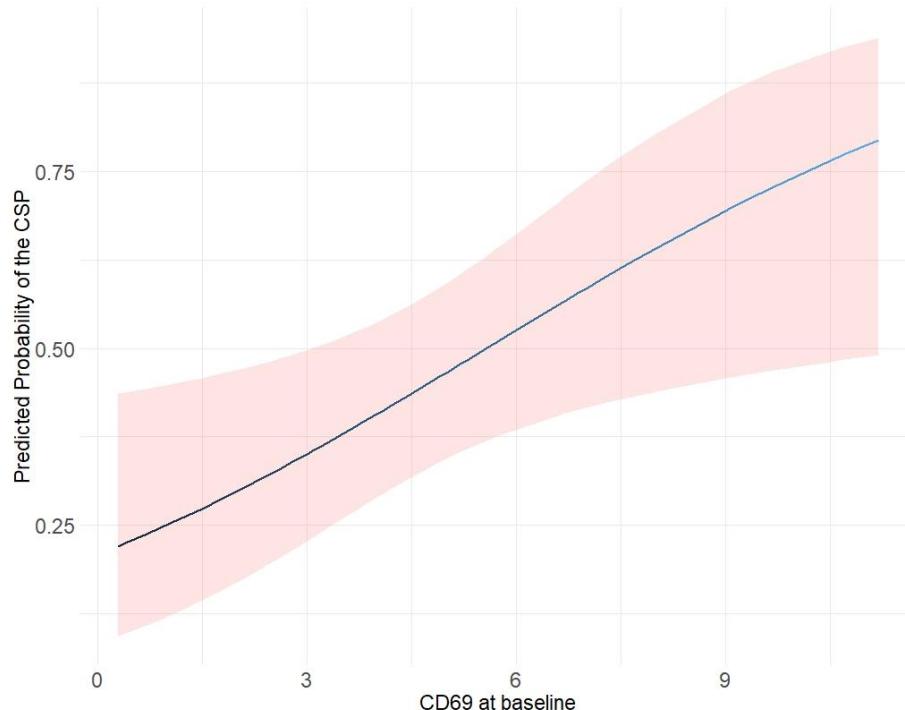

Supplementary Figure 5. Predicted probability of the CSP (CD4+/CD45RO+ab at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The

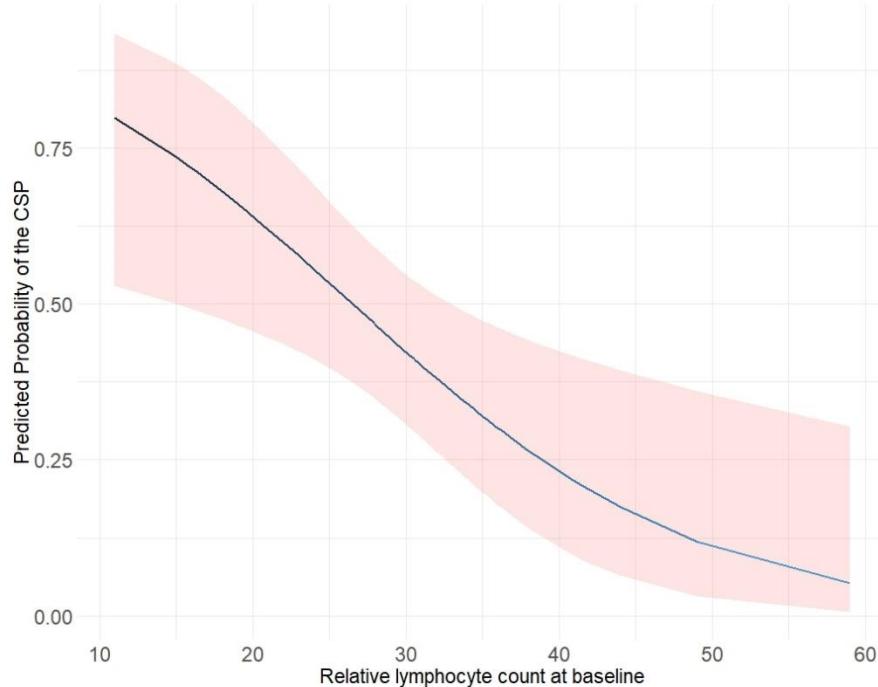

blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

Supplementary Figure 6. Predicted probability of the CSP (CD8 at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

Supplementary Figure 7. Predicted probability of the CSP (CD69 at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

Supplementary Figure 8. Predicted probability of the CSP (relative lymphocyte count at baseline). Legend: The figure shows the predicted probability of the CSP (on vertical axis) for the range of measured values (on the horizontal axis) of a lymphocyte parameter (labelled at the bottom of the figure). The blue curve depicts the point estimate of the probability and the pink area represents its 95% confidence interval.

Supplementary Table 1. Antibodies, their provenience and dilution.

specificity	clone	fluorochrome	amount of undiluted antibody use in test	manufacturer
anti-CD3	UCHT1	FITC	10 µl	Beckman Coulter
anti-CD4	13B8.2	FITC	10 µl	Beckman Coulter
anti-CD45RA	ALB11	FITC	10 µl	Beckman Coulter
anti-CD8	B9.11	FITC	10 µl	Beckman Coulter
anti-CD19	J3-119	FITC	10 µl	Beckman Coulter
anti-CD25	B1.49.9	PE	10 µl	Beckman Coulter
anti-CD69	TP1.55.3	PE	10 µl	Beckman Coulter
anti-CD4	13B8.2	PE	10 µl	Beckman Coulter

anti-CD45RO	UCHL1	PE	10 µl	Beckman Coulter
anti-CD38	LS198-4-3	PE	10 µl	Beckman Coulter
anti-CD5	BL1a	PE	10 µl	Beckman Coulter
anti-CD40	MAB89	PE	10 µl	Beckman Coulter
anti-CD40L	TRAP-1	PE	10 µl	Beckman Coulter

Supplementary Table 2. Descriptive characteristics for all 37 parameters and EDSS groups' comparison.

Characteristic		All (72)	CSP (32)	Non SP (40)	Groups' comparison

Legend: The reported statistics are mean±standard deviation. Effect size is assessed by Cohen's D. All P values are reported after Benjamini-Hochberg correction.

Supplementary Table 3. Univariate logistic regression models for values of lymphocytes' parameters in the fifth year and their changes (absolute and relative) and multivariate ones with adjustment by covariates: EDSS, age and gender.

Legend: OR - Odds ratio, 95% LCI OR is lower 95% confidence limit of OR, 95% UCI is upper 95% confidence limit of OR, R2 is Nagelkerke's pseudo R squared that assesses the quality of fit (the higher, the better). Suffix (in the name of variable) .5 is value at the 5th year, .abs and .rel are absolute and relative changes after 5 years.
