

## SUPPLEMENTARY MATERIALS

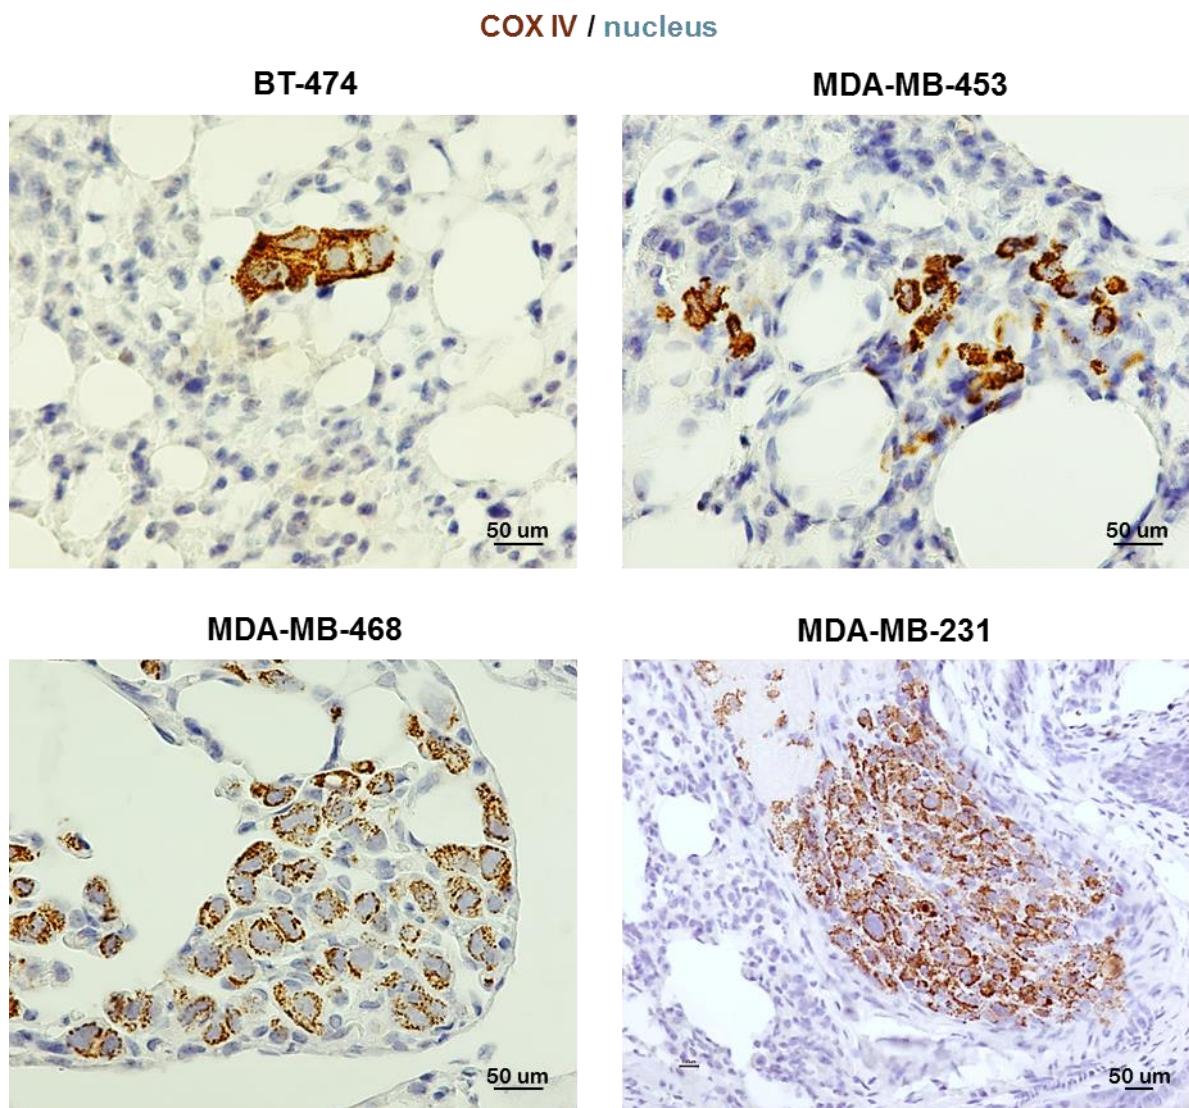

**Figure S1. Species-specificity of anti-human COX IV antibody.** Image represents spleen mononuclear cells from a BALB/c Nude mouse acquired by FITC (anti-COX IV antibody, *left*) and DAPI (nuclei, *right*) filters (40x oil immersion objective).

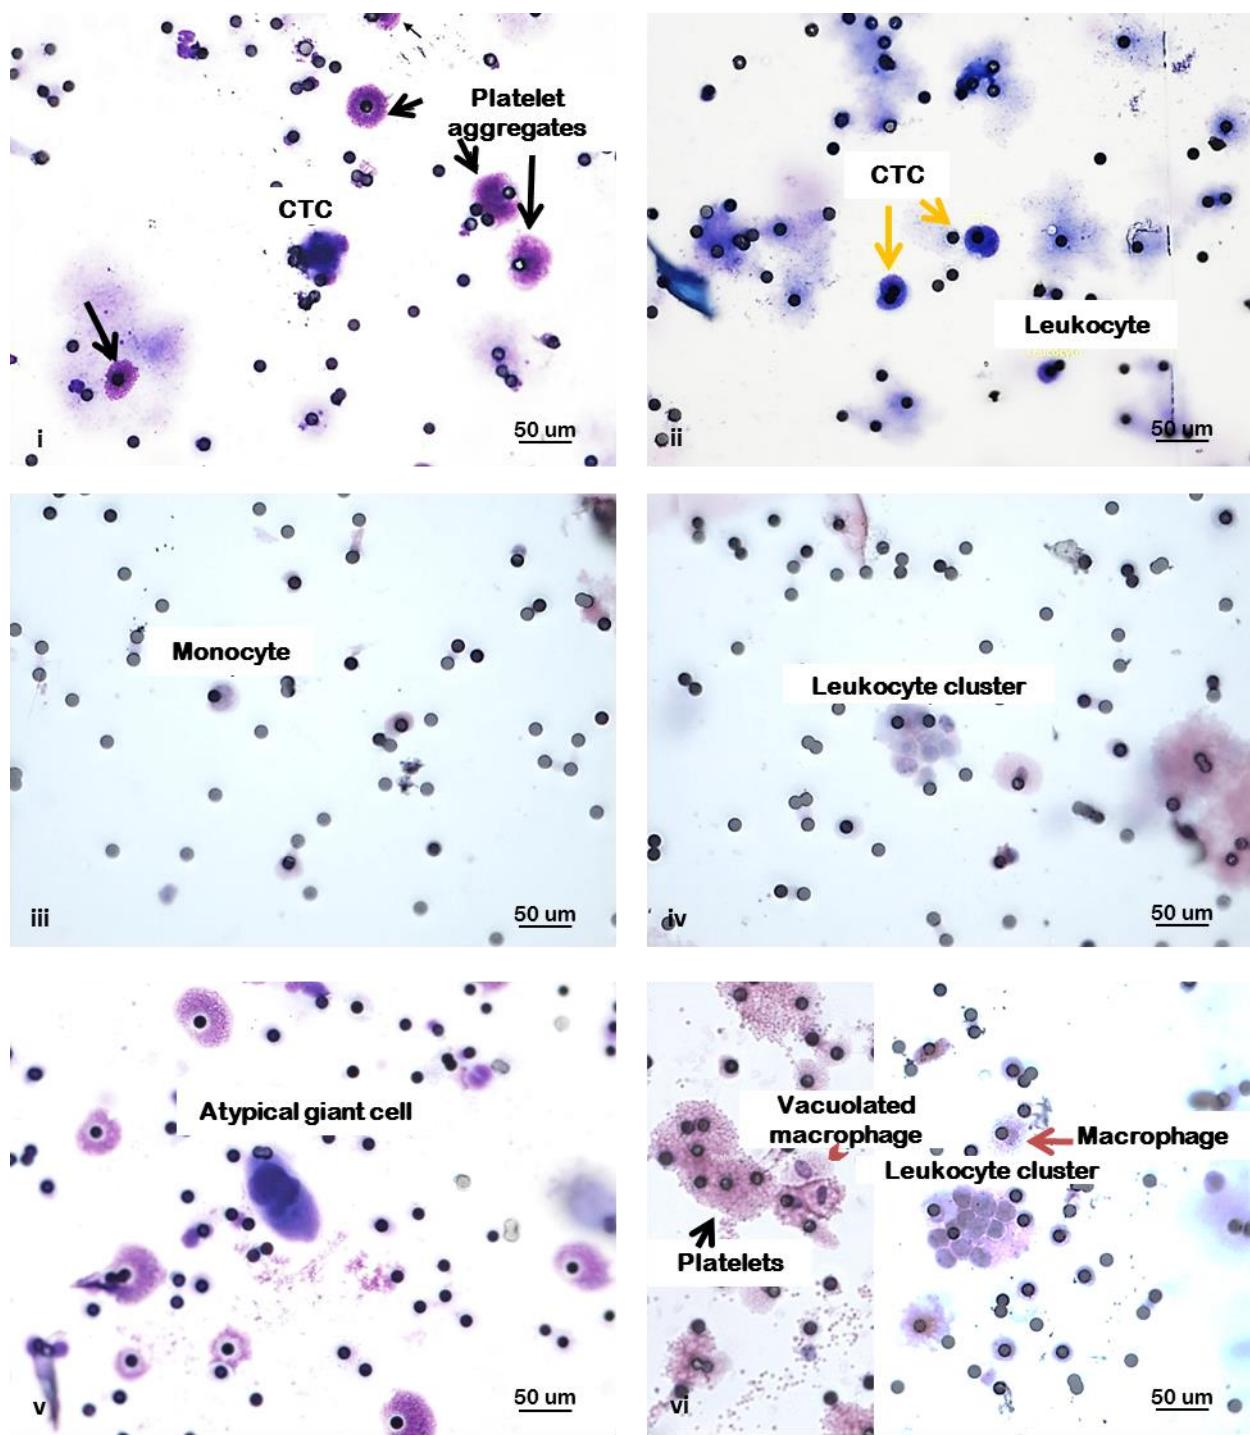

**Figure S2.** Primary tumor growth in breast cancer xenograft models. Curves represent the mean $\pm$ SD mass of a single nodule for BT-474 and MDA-MB-453, the mean $\pm$ SD of the sum of the masses of two nodules for

MDA-MB-468 and MDA-MB-231, and the mean $\pm$ SD masses of matched axillary and inguinal nodules from MDA-MB-468 and MDA-MB-231 xenograft models, at different time points ("\*": adjusted p-value <0.01).

**Figure S3.** Lung metastases in breast cancer xenograft models. Images represent metastatic cell foci, with tumor cells showing cytoplasmic punctuated brown staining for COX IV and blue counterstained large nuclei, in lung samples from BT-474, MDA-MB-453, MDA-MB-468 (40x oil immersion objective) and MDA-MB-231 (20x objective) xenograft models.

**Figure S4. Cell types observed in cytological blood samples from breast cancer xenograft models.** Images depict (i) platelet aggregates (black arrows) in MDA-MB-231 xenografts (40 objective), (ii) a single leukocyte, (iii) a monocyte, (iv) a cluster of leukocytes and (v) an atypical giant cell in MDA-MB-453 (40x objective), and (vi) a vacuolated macrophage in MDA-MB-453 (left) and a normal macrophage (right) in BT-474 xenografts (red arrows, 40x objective).

**Table S1. Circulating tumor cell (CTC) load in breast cancer xenograft models**

CTC model	median*(range) sCTC/mL				median*(range) cCTC/mL				overall mean±SD	
	Exp1		Exp2		Exp1		Exp2			
	N**	sCTC	N*	sCTC	N*	cCTC	N**	cCTC	sCTC/mL	cCTC/mL
<b>BT-474</b>	2	0-2	7	1(1-5)	2	0-2	6	0(0-2)	1.8±1.6	0.5±0.9
