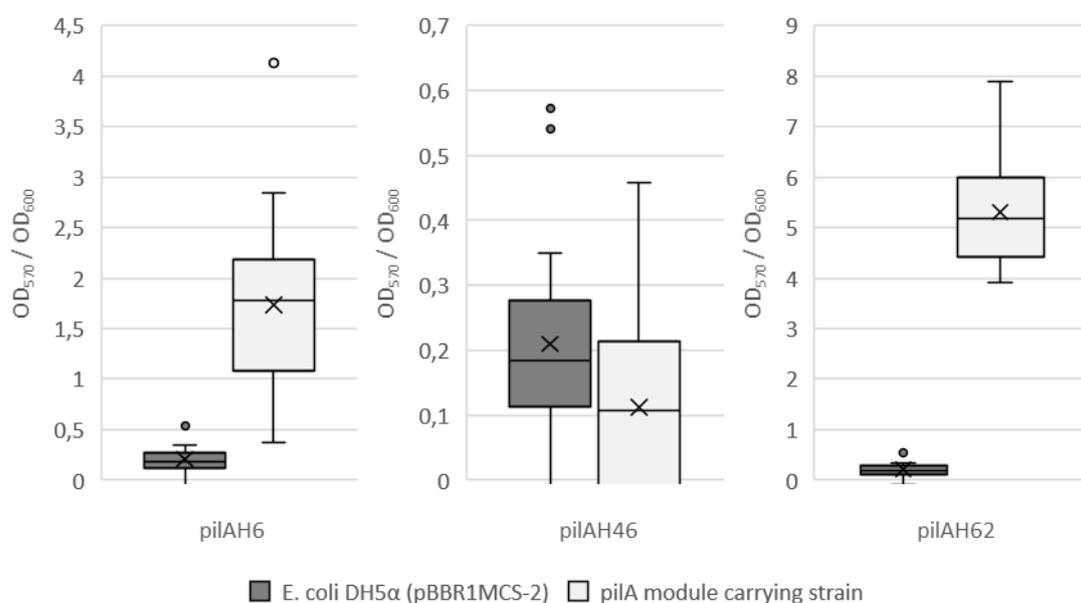

Figure S1. Box plots of OD₅₇₀/OD₆₀₀ ratios for the results of the crystal violet staining test performed for *E. coli* DH5α (pBBR1MCS-2) and *E. coli* strains carrying PIL modules (*pilA* genes) of plasmids pA6H3, pA46H2 and pA62H1 cloned within the pBBR1MCS-2 vector (i.e. *E. coli* pilAH6, *E. coli* pilAH46 and *E. coli* pilAH62, respectively). The crosses correspond to the means. The central horizontal bars are the medians. The lower and upper limits of the box are the first and third quartiles, respectively. Points above and below the whiskers' upper and lower bounds are outliers. For the analysis the Mann-Whitney U test was applied.

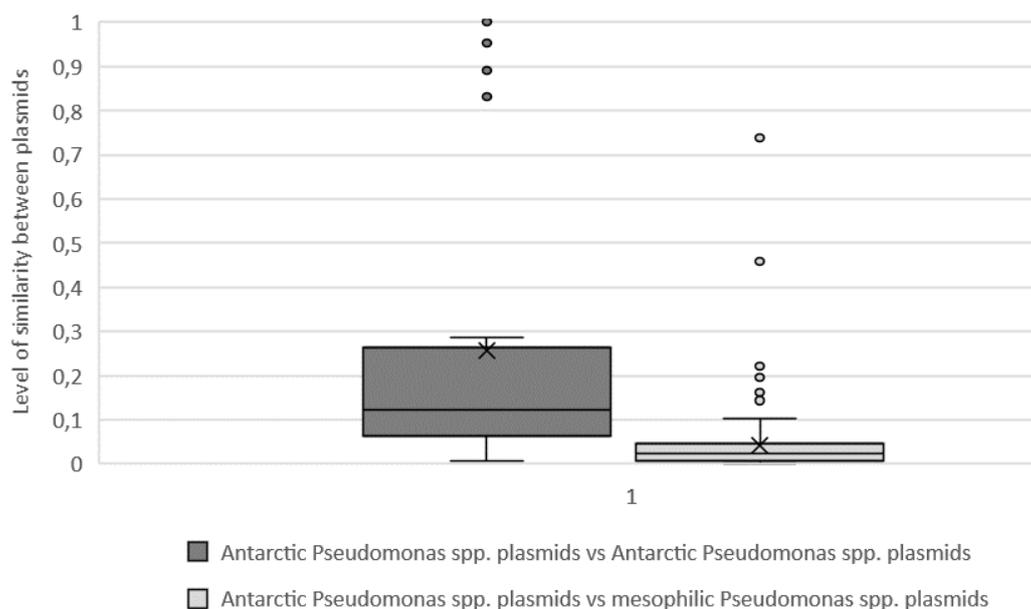

Figure S2. Box plots of levels of similarity between Antarctic *Pseudomonas* spp. plasmids and between Antarctic *Pseudomonas* spp. plasmids and mesophilic *Pseudomonas* spp. plasmids. The crosses correspond to the means. The central horizontal bars are the medians. The lower and upper limits of the box are the first and third quartiles, respectively. Points above and below the whiskers' upper and lower bounds are outliers. Statistical significance is of $p < 0.0001$. For the analysis the Mann-Whitney U test was applied.

Table S1. Primers used in this study.

| Primer | Sequence ¹ | Plasmid | Position |
