Supplementary Table S2. Statistics of the de novo gut transcriptome assembly of *Tineola bisselliella* larvae.

Number of contig	428,221
Smallest contig [bp]	177
Largest contig [bp]	50,898
Assembled bases [bp]	518,270,755
Mean contig length [bp]	1,210
Number of contigs <200 bp	60
Number of contigs >1 kbp	97,092
Number of contigs >10 kbp	7,404
GC content [%]	36.06
N90 [bp]	377
N50 [bp]	3,772

Supplementary Table S3. TransDecoder results for the *T. bisselliella* de novo transcriptome assembly.

Status	Absolute abundance	Relative abundance

Please note that due to rounding, values may not add up to exactly 100%.

Supplementary Table S5. Summary of the functional transcriptome annotation. Peptide sequences from open reading frames (ORF) prediction were used as input for the analysis, except for the NT database, where the contigs were used as input. Percentage of ORFs was calculated with the 94,304 ORFs as base value, total number of 428,221 contigs was the base value for the calculation of contig percentage.

Database	Contigs	ORF [%]	Contigs [%]
nr	78,571	83.32	18.35
UniProt	78,859	83.62	18.42
nt	58,697	-	13.71

Supplementary Table S7. Differentially expressed contigs of *T. bisselliella* larval guts with trypsin domains (adjusted p-value ≤ 0.05 and $\log_2\text{FC} \geq 1.5$). The column “diet induced” shows whether the contig was found in samples of a keratin-rich or keratin-free diet. NR annotation column shows the best hit to NCBI nr database. complete (domain coverage $\geq 90\%$); p: partial (query coverage $\geq 90\%$); f: fragment (all others). The base mean count column shows the average of the normalized counts from DESeq2. In the absolute \log_2 fold-change column the maximum $\log_2\text{FC}$ from the DESeq2 analysis is shown.
