#Adjusted for genetically-predicted SDB

IVW-MRE = inverse variance weighted with mixed random effects, MR = mendelian randomisation, SNP = single-nucleotide polymorphism, LCI= lower confidence interval, UCI = upper confidence interval

Table S2 – Single-nucleotide polymorphism (SNP) Mendelian randomisation estimates in the analysis of sleep-disordered breathing (SDB, exposure) and atrial fibrillation (AF, outcome). Beta = beta coefficients, which represent the genetic association estimate produced by dividing genetic association of the SNP with the outcome (AF, units of log odds ratio atrial fibrillation liability) by genetic association of the SNP with the exposure (SDB, units of log odds ratio snoring liability).
