

**Phylogenetic analyses of some key genes provide information on pollinator
attraction in Solanaceae**

Table S3 Parameter estimates for Site Model and log-likelihood values under-tested models. Values highlighted in bold indicate relevant values for the interpretation of the result. “np” stands for the number of parameters. Ln (Likelihood) refers to the log value of the likelihood

Model	np	Ln L	Estimates of parameters	Model compared	LRT P-value	Positive sites
DFR						
			p: 0.803 0.197 0.000

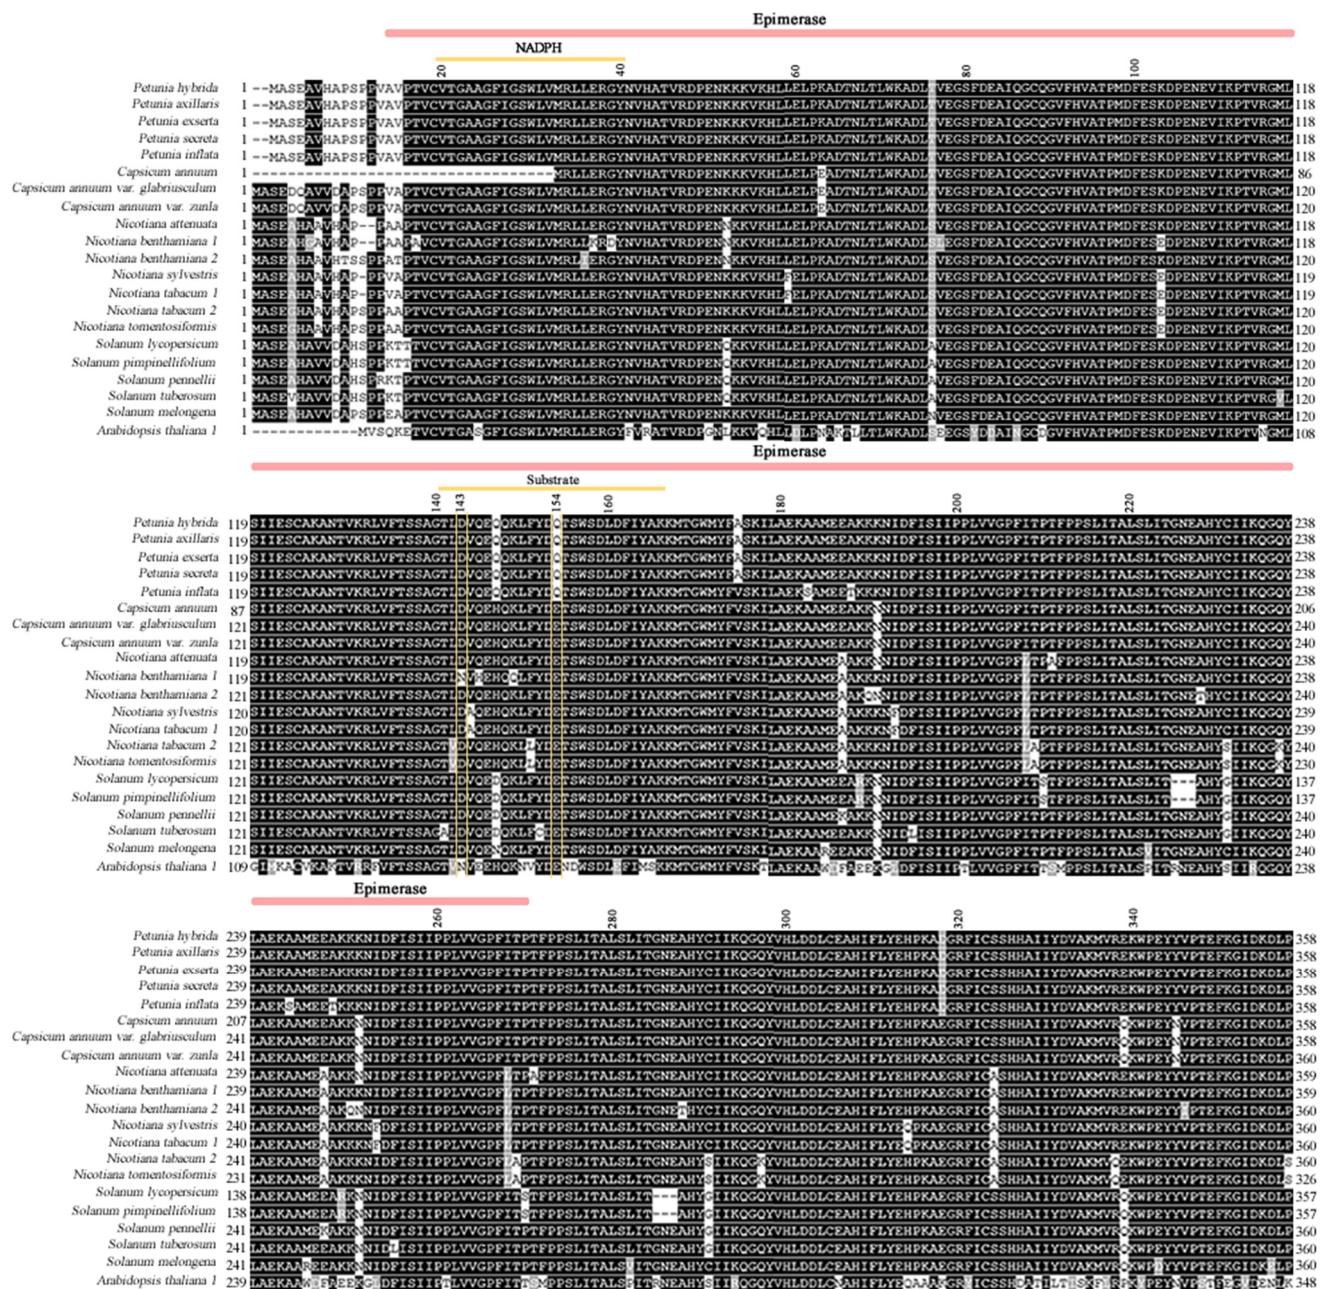

Figure S1. Multiple sequence alignment of DFR protein domain in Solanaceae species. Dark boxes indicate conserved amino acids. Colored lines above the sequences indicated epimerase domain (ligh pink line), NADP(H)-binding site and the substrate specificity site (yellow line). Amino acid position 143 e 154 highlighted in yellow indicate important sites to substrate specificity and enzime activity, respectively.

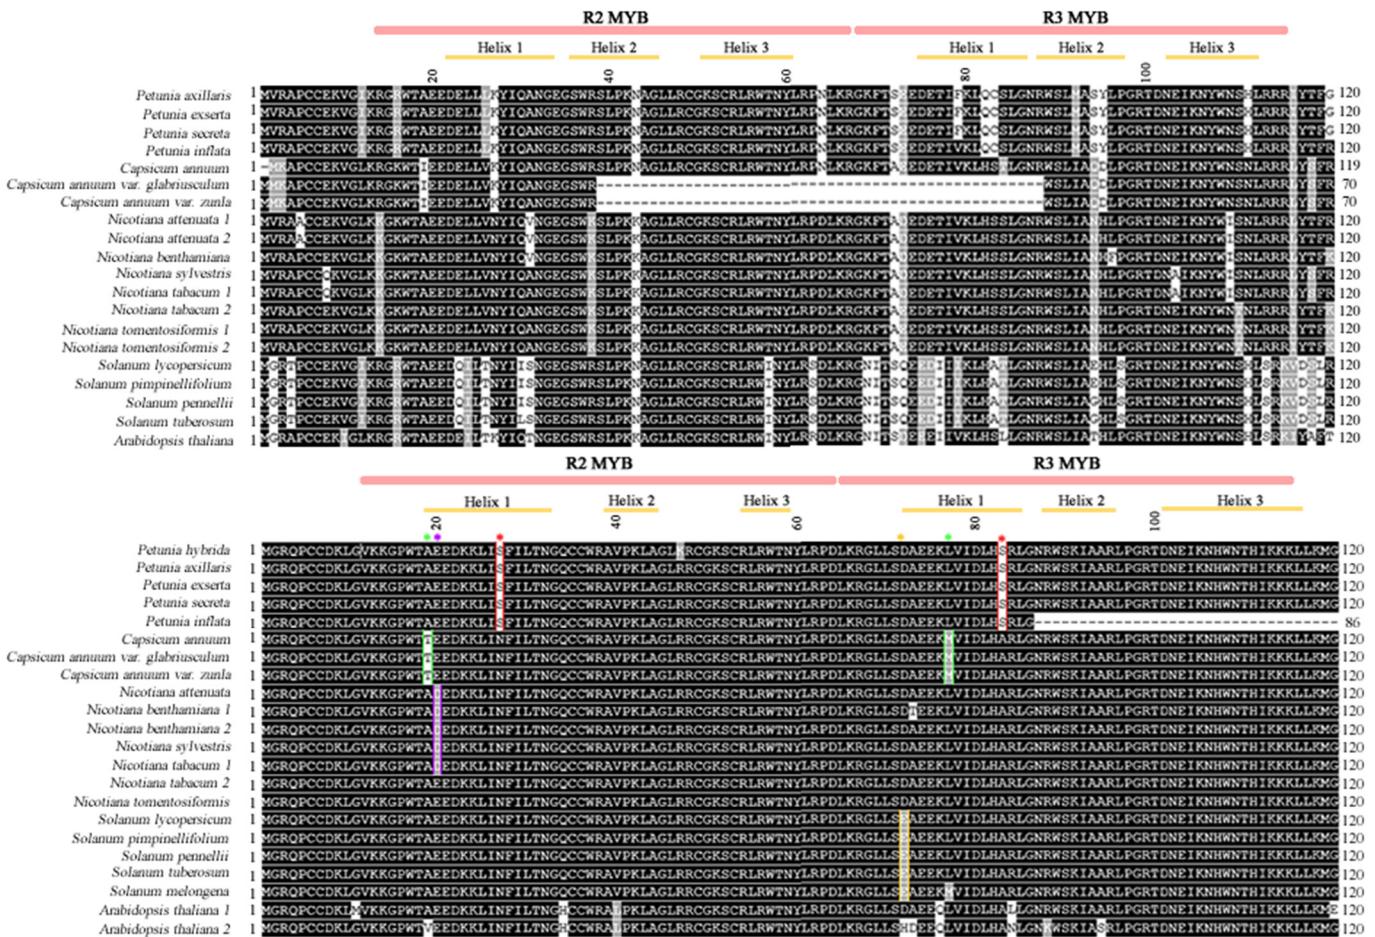

Figure S2. Multiple sequence alignment of MYB-FL (A) and ODO1 (B) R2R3 protein domain in Solanaceae species. Dark boxes indicate conserved amino acids. Colored lines above the sequences indicated the R2R3 domains (light pink line) and the helices structure (yellow line). Symbols (*) indicate each genus exclusive substitutions [Petunia (red), Capsicum (green), Nicotiana (purple), and Solanum (yellow)]. All substitutions occur within helix 1 of the R2R3 domain.

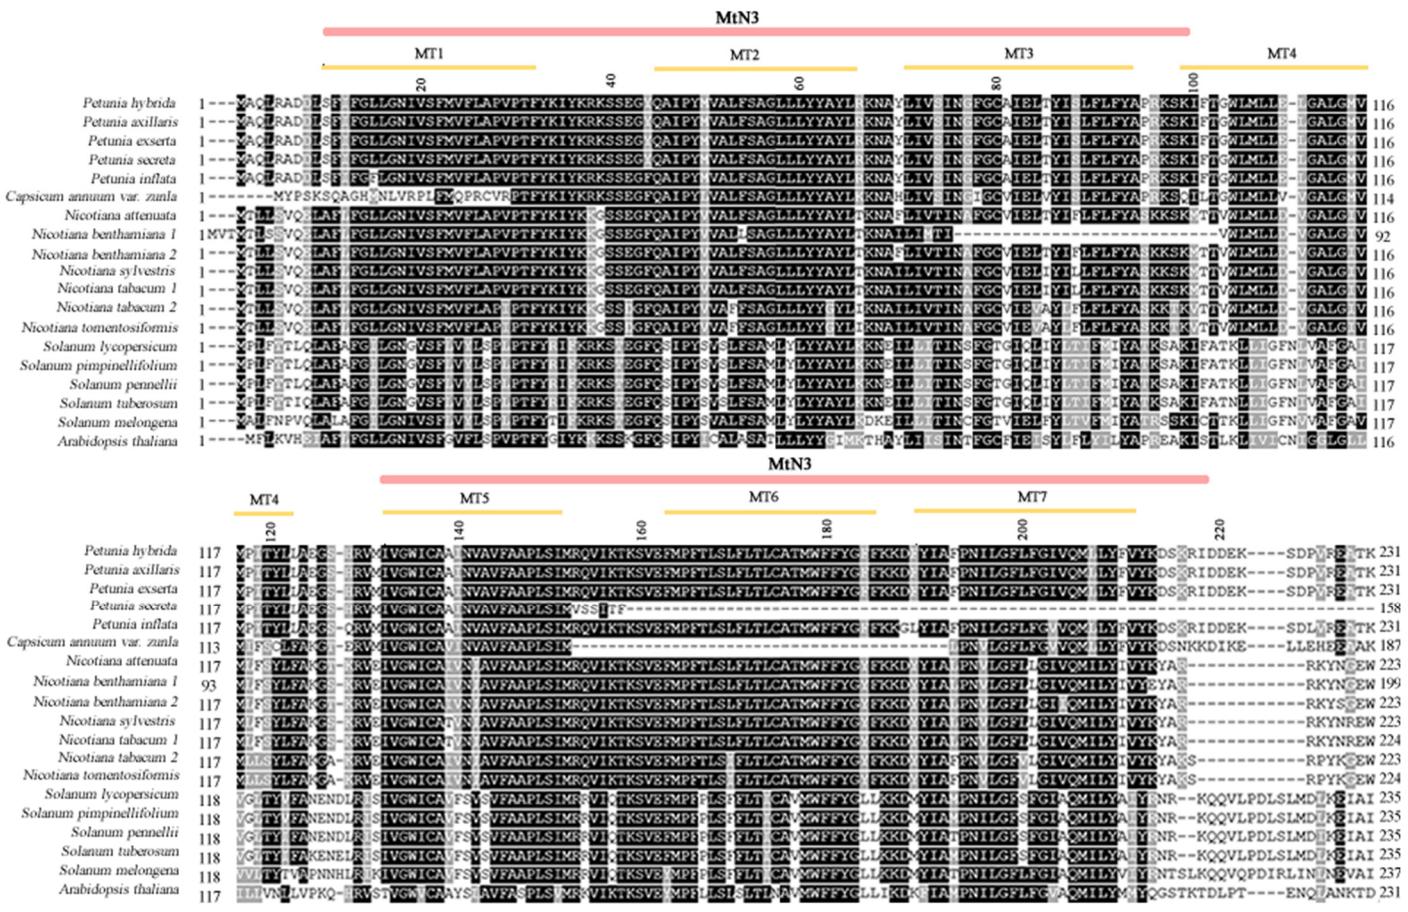

Figure S3. Multiple sequence alignment of the NEC1 MtN3 protein domain in Solanaceae species. Dark boxes indicate conserved amino acids. Colored lines above the sequences indicated the MtN3 domain (light pink line) that consist of two tandemly repeated 3-TMs separated by a single TM (yellow line).

Figure S4. Logo of conserved motifs of DFR protein sequences. Numbered and colored boxes indicate the motifs identified in MEME analyze. Each motif has a corresponding amino acid logo. Large letters indicate the conserved and small letters indicate variable positions, with variations also indicated in the last.

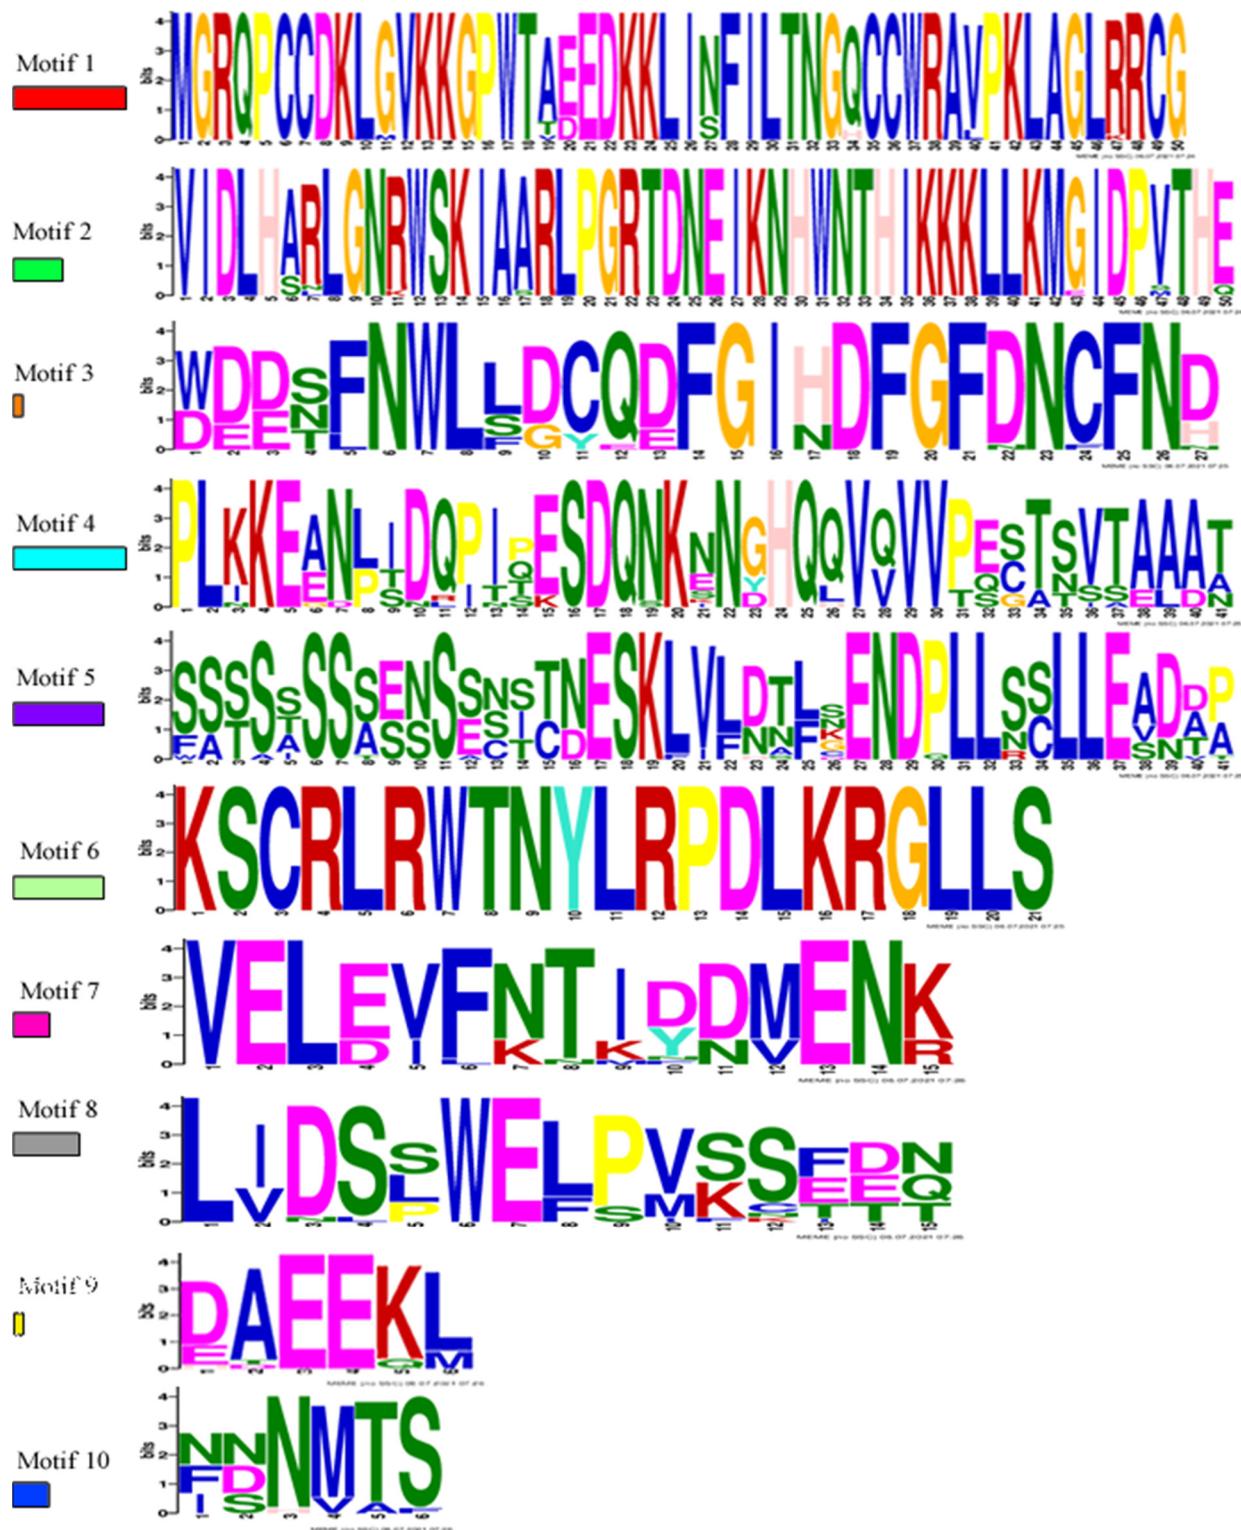

Figure S5. Logo of conserved motifs of ODO1 protein sequences. Numbered and colored boxes indicate the motifs identified in MEME analyze. Each motif has a corresponding amino acid logo. Large letters indicate the conserved and small letters indicate variable positions, with variations also indicated in the last.

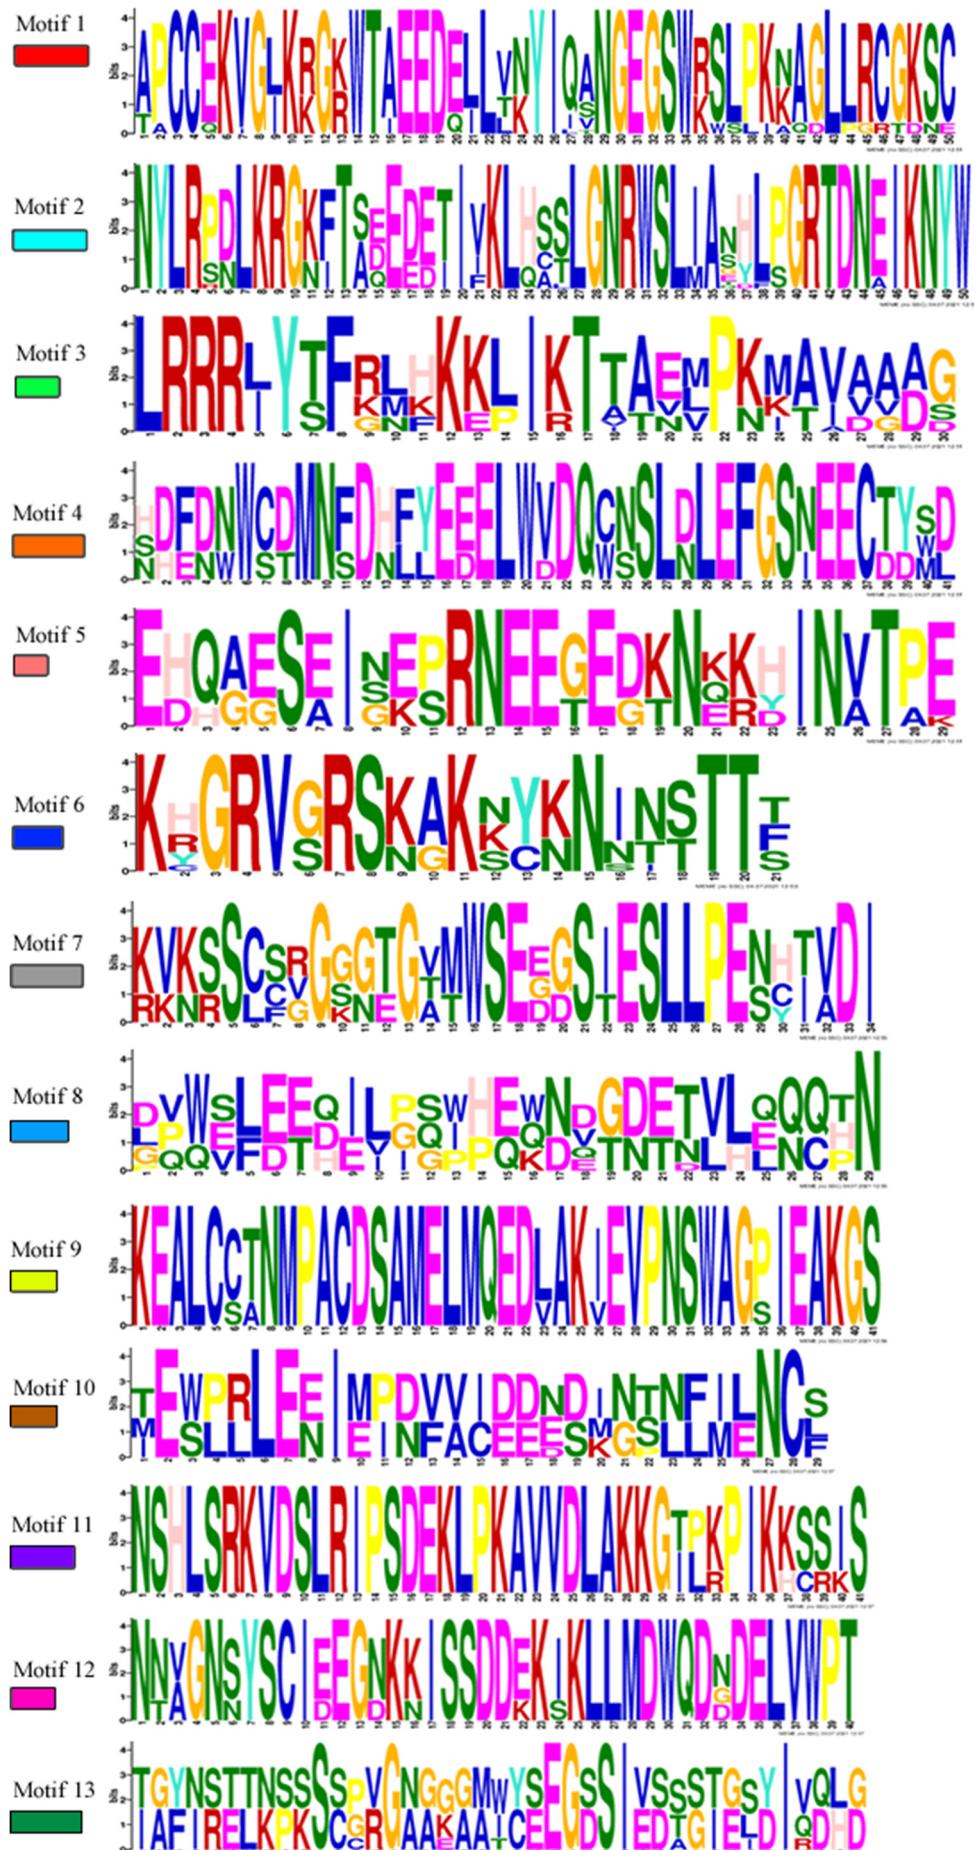

Figure S6. Logo of conserved motifs of MYB-FL protein sequences. Numbered and colored boxes indicate the motifs identified in MEME analyze. Each motif has a corresponding amino acid logo. Large letters indicate the conserved and small letters indicate variable positions, with variations also indicated in the last.

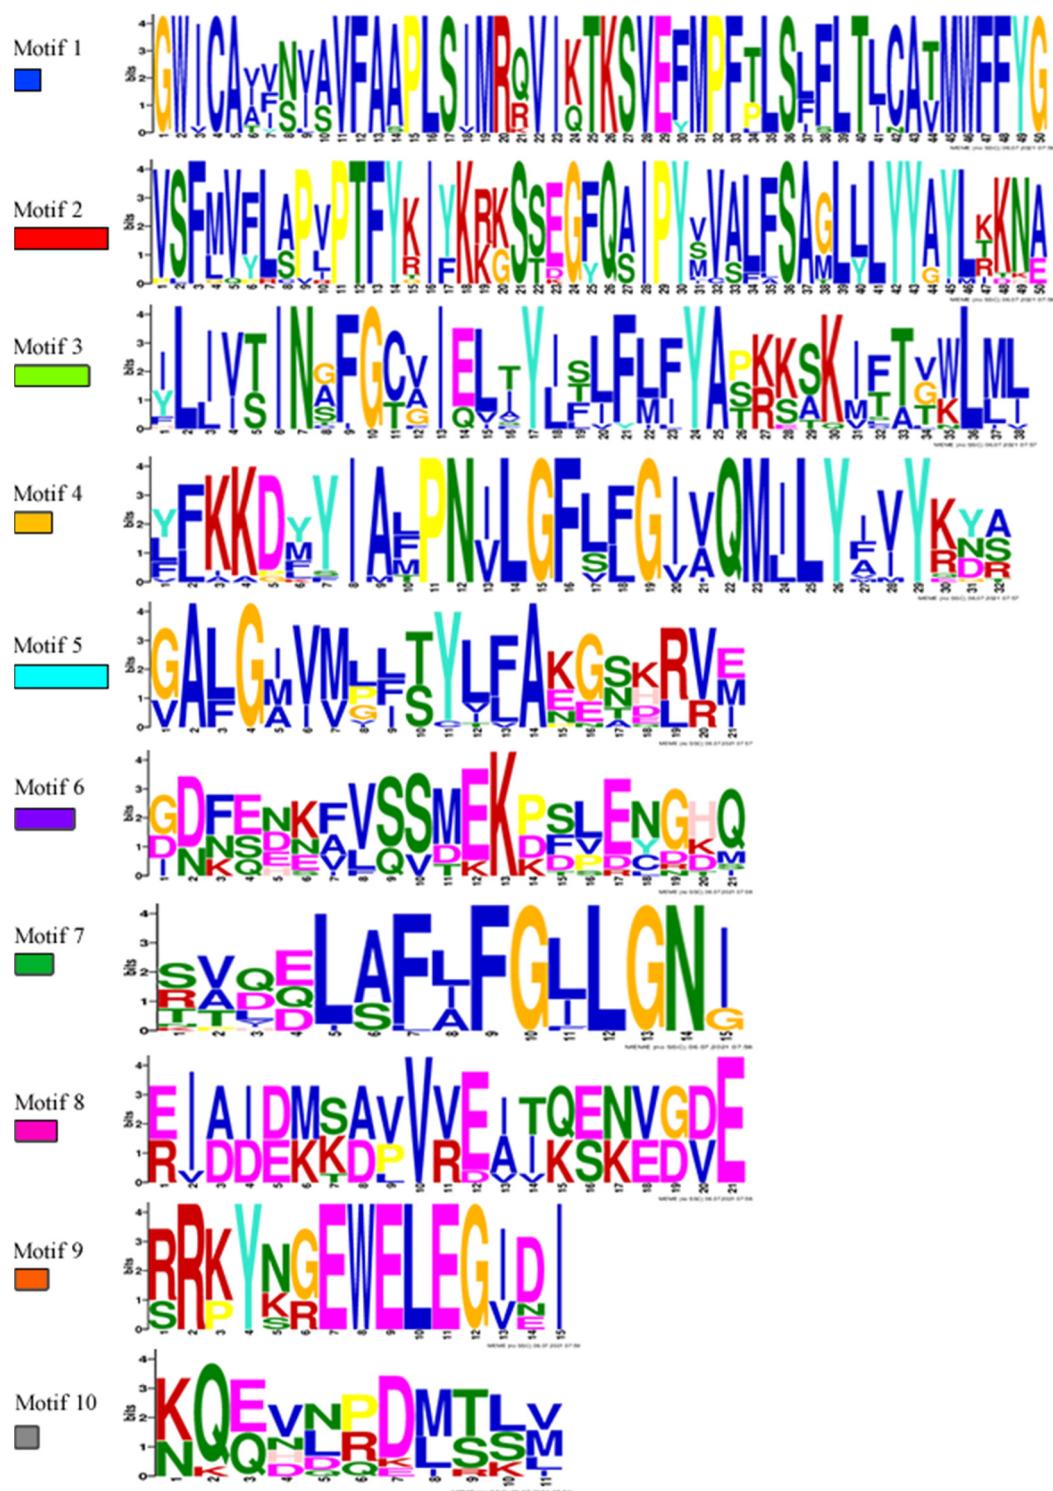

Figure S7. Logo of conserved motifs of NEC1 protein sequences. Numbered and colored boxes indicate the motifs identified in MEME analyze. Each motif has a corresponding amino acid logo. Large letters indicate the conserved and small letters indicate variable positions, with variations also indicated in the last.
