

Figure S1. Northern blot showing Pxr-S. Longer exposure times of the *in vivo* and *in vitro* Northern blots shown in Figure 4 allow better visualization of Pxr-S but reduce visualization of the distinction between Pxr-XL and Pxr-L. The Northern blots shown for (A) and (B) are the same as for Fig. 4 except with longer exposure. Arrow designations are the same as in Fig. 4.

Figure S2. *rnd*-transcript quantity decreases upon starvation. Comparison of *rnd*-transcript levels after rt-PCR amplification with *rnd*-specific primers for samples isolated from strain GJV1 at the vegetative mid-log state (V), and 1, 3, 6 and 9 hours post-starvation.
